*Experimental Safety Vehicles. Tenth. [Proceedings.]*, 1986      Whole System Design Peter Stansinopoulos, Michael Smith, Karlson Hargroves, Cheryl Desha, 2013-01-11 Whole System Design is increasingly being seen as one of the most cost effective ways to both increase the productivity and reduce the negative environmental impacts of an engineered system A focus on design is critical as the output from this stage of the project locks in most of the economic and environmental performance of the designed system throughout its life which can span from a few years to many decades Indeed it is now widely acknowledged that all designers particularly engineers architects and industrial designers need to be able to understand and implement a whole system design approach This book provides a clear design methodology based on leading efforts in the field and is supported by worked examples that demonstrate how advances in energy materials and water productivity can be achieved through applying an integrated approach to sustainable engineering Chapters 1 5 outline the approach and explain how it can be implemented to enhance the established Systems Engineering framework Chapters 6 10 demonstrate through detailed worked examples the application of the approach to industrial pumping systems passenger vehicles electronics and computer systems temperature control of buildings and domestic water systems Published with The Natural Edge Project the World Federation of Engineering Organizations UNESCO and the Australian Government      **AI System Support for Conceptual Design** John E.E. Sharpe, 2012-12-06 It is well known that some 85% of the resources necessary to design and bring to market a product are committed by decisions taken in the first 10% of the design activity This together with the wish to reduce further the time to market of high quality innovative products has increased the need for computer support at the conceptual design stage of the engineering design process life style This proceedings firmly focuses on the continuing research into new uses of Artificial Intelligence AI during the conceptual design process It shows how novel applications of AI may be integrated with aspects of solid modelling simulation optimisation and multiple criterion decision making A particular emphasis is placed on the use of AI methods in the overall design of products from major Civil Engineering structures to Consumer Electronics      **Highway Safety Literature**, 1979      *Research Reports of the National Highway Traffic Safety Administration; a Bibliography*. 1967-June 1971, 1971      *Proceedings of the 8th International Symposium on Heating, Ventilation and Air Conditioning* Angui Li, Yingxin Zhu, Yuguo Li, 2013-09-30 Proceedings of the 8th International Symposium on Heating Ventilation and Air Conditioning is based on the 8th International Symposium of the same name ISHVAC2013 which took place in Xi an on October 19 21 2013 The conference series was initiated at Tsinghua University in 1991 and has since become the premier international HVAC conference initiated in China playing a significant part in the development of HVAC and indoor environmental research and industry around the world This international conference provided an exclusive opportunity for policy makers designers researchers engineers and managers to share their experience Considering the recent attention on building energy consumption and indoor environments ISHVAC2013 provided a global platform for discussing recent research on and developments in different aspects of HVAC systems and components

The Multi Material Lightweight Vehicle (MMLV) Project David Wagner, Jeff L Conklin, Matthew Zaluzec, Timothy W Skszek, 2015-06-05. The desire for greater fuel efficiency and reduced emissions have accelerated a shift from traditional materials to design solutions that more closely match materials and their properties with key applications. The Multi Material Lightweight Vehicle MMLV Project presents cutting edge engineering that meets future challenges in a concept vehicle with weight and life cycle assessment savings. These results significantly contribute to achieving fuel reduction and to meeting future Corporate Average Fuel Economy (CAFE) regulations without compromising vehicle performance or occupant safety. The MMLV Project presents Lightweight materials applications: Body in white design and computer aided engineering, Engine and transmission design and lightweighting. Full vehicle test results that are specific to the MMLV subsystems including crash, corrosion, durability and Noise, Vibration and Harshness (NVH). The Life Cycle Analysis (LCA) for the MMLV. The aluminum intensive structure combined with carbon fiber, magnesium and titanium results in full vehicle mass reduction of a C/D class family sedan to that of a subcompact B car. Two vehicle segments lighter. The MMLV Project presents engineering solutions that frame materials selection and applications for the future.
