## Form Space Vision:

*Form and Space Vision* Yves Le Grand, 1967      **Form, Space, and Vision** Graham Collier, 1972      **John McGahern** John Singleton, 2023-11-17 John McGahern 1934 2006 believed that fiction could act as a window on the world Such windows however frame our fields of vision alter and shape our perspectives Far from being static the artist's perspective must continually evolve This book provides a literary analysis of John McGahern's artistic and poetic vision his ways of looking examining the shifting focus of this vision how and why it develops what effects such developments have on the work's forms and how these forms evolve at what times and in response to what stimuli This volume demonstrates that such developments mirror an analogous social expansion during the latter half of the twentieth century and argues that McGahern's literary spaces relate to his efforts to realise a more accommodating form to envelop the structureless society While the number of critical studies on McGahern has increased markedly in recent years research still tends to fall into the well established camps of social realism or literary aestheticism This text aims to explore the common ground between the material context and social worlds of each work and the hermeneutics of a traditional literary investigation It traverses such divides through close readings of McGahern's work with attention to the topopoetical production of images of the house the home and the family unit The book ultimately shows how attention to McGahern's literary spaces provides a greater understanding of the aesthetic vision and form of each novel and allows us to understand those aspects relative to the social cultural and political undercurrents of the works individually and collectively      *Form and Space Vision. Revised Edition* Y. Le Grand, 1967

*Current Catalog* National Library of Medicine (U.S.), 1968 Includes subject section name section and 1968 1970 technical reports      **Visions of the Real** Alexandru Calcatinge, 2011 The cultural landscape is what lies around us and has to be understood and learned to deal with The best way to do this is to start from the beginning in order to understand the contemporary iterations of the concept We will not reinvent the concept but we will try to create a new way to see it The operative concept of cultural landscape is part of a reality that is seen and visioned differently by each individual This means that the concept has an almost infinite number of meanings Thus this book presents some of the visions of the surrounding reality through the eyes of an architect      **Visual Form 2001** Carlo Arcelli, Luigi P. Cordella, Gabriella Sanniti di

Baja, 2003-06-29 This book constitutes the refereed proceedings of the 4th International Workshop on Visual Form IWVF 4 held in Capri Italy in May 2001 The 66 revised full papers presented together with seven invited papers were carefully reviewed and selected from 117 submissions The book covers theoretical and applicative aspects of visual form processing The papers are organized in topical sections on representation analysis recognition modelling and retrieval and applications

Perception of an Illusory Form Under Conditions of Limited Visibility Jeff Rabin, 1996      *The Dynamics of Architectural Form* Rudolf Arnheim, 2009-10-19 Rudolf Arnheim has been known since the publication of his groundbreaking *Art and Visual Perception* in 1974 as an authority on the psychological interpretation of the visual arts Two anniversary volumes celebrate

the landmark anniversaries of his works in 2009 In *The Power of the Center* Arnheim uses a wealth of examples to consider the actors that determine the overall organization of visual form in works of painting sculpture and architecture *The Dynamics of Architectural Form* explores the unexpected perceptual consequences of architecture with Arnheim's customary clarity and precision

*Objects in Air* Margareta Ingrid Christian, 2021-06-07 Margareta Ingrid Christian unpacks the ways in which around 1900 art scholars critics and choreographers wrote about the artwork as an actual object in real time and space surrounded and fluently connected to the viewer through the very air we breathe Theorists such as Aby Warburg Alois Riegl Rainer Maria Rilke and the choreographer Rudolf Laban drew on the science of their time to examine air as the material space surrounding an artwork establishing its milieu atmosphere or environment Christian explores how the artwork's external space was seen to work as an aesthetic category in its own right beginning with Rainer Maria Rilke's observation that Rodin's sculpture exhales an atmosphere and that Cezanne's colors create a calm silken air that pervades the empty rooms where the paintings are exhibited Writers created an early theory of unbounded form that described what Christian calls an artwork's ecstasis or its ability to stray outside its limits and engender its own space Objects viewed in this perspective complicate the now fashionable discourse of empathy aesthetics the attention to self-projecting subjects and the idea of the modernist self-contained artwork For example Christian invites us to historicize the immersive spatial installations and environments that have arisen since the 1960s and to consider their origins in turn of the twentieth century aesthetics Throughout this beautifully written work Christian offers ways for us to rethink entrenched narratives of aesthetics and modernism and to revisit alternatives

*Origins of Form* Christopher Williams, 2013-05-10 Makes readers aware of their physical environment and how to break away from previously held assumptions and indifference about the ways forms in our human environment have evolved It shows better ways to do things

**The Dynamics of Architectural Form** Rudolf Arnheim, 1977 The power of the visual effects exerted by architecture in our own time and in the past has been largely neglected in recent discussion with its focus on practical utility and other economic and social factors Such an account of the human needs met by architecture remains sadly incomplete unless the expressive visual qualities of buildings are recognized as among their foremost effects A fresh approach is overdue an attempt to analyze these psychological qualities with the principles of visual perception Such an attempt is made in this new volume by Rudolf Arnheim who has been known since the publication of his *Art and Visual Perception* as an authority on the psychological interpretation of the visual arts As he now turns his experienced eye to the visual aspects of buildings he amplifies his theories with new features specific to the medium of the architect Arnheim explores the unexpected perceptual consequences of architecture with his customary clarity and precision Of particular interest is his thorough analysis of order and disorder in design the nature of visual symbolism and the relations between practical function and perceptual expression Arnheim's ability to deal with theoretical principles in a concrete and easily accessible way assures him the attention of the general reader whose concern with the arts leads to the

aesthetic and psychological aspects of the broader environment At the same time Arnheim s strikingly original approach will stimulate professionals and students concerned with the theory and practice of modern and historical architecture

**Biophysics and Neurophysiology of the Sixth Sense** Nima Rezaei, Amene Sagha-zadeh, 2019-04-26 Multiple senses like multiple intelligences are a key to brain variability and therefore human evolution Besides the traditional five senses vision olfaction gustation audition and somatosensory humans can also perceive the body s own position the sense of proprioception and movement the vestibular sense Interoception is the feeling one has about the internal physiological conditions of the entire body Additionally there is a sense of intuition also known as the sixth sense Despite their best efforts researchers are still unable to concur in specifying the nature of the sixth sense some consider the sense of proprioception as the sixth sense whereas others prefer to consider that as a part of interoception This book will provide a scientific system for the human sixth sense using relevant biophysical and neurophysiological evidence The power of sixth sense seems to be underestimated due to difficulties in defining the concept clearly According to socioeconomics and neural physics the sixth sense is that which permits humans to create perception or to enhance the quality of their perception of events Roughly speaking the sixth sense engages a metacognitive process through which prior knowledge and the information received from other sensory modalities are synergized It is not restricted to specific arrow of time and type of mind or to the observer s body but it considers all arrows of time past present future types of mind conscious and unconscious and physical bodies self and other However it is expected that the observer has specific biases towards what happens now or would happen in the future and its relation to himself Particularly humans appeal to the sixth sense on the road to achieving success in social competitions and to reduce uncertainty in complex decision making processes In addition to evidence linking genetic components to the sixth sense submodalities there have been developed strategies for increasing the quality of perceptions provided by the sixth sense Meditation through which individuals try to be detached from the world increases gamma band activity and that increased gamma band activity is found following top down processing Therefore it can be inferred that the detachment from the environment may enhance synchronization of the wave functions in favor of strengthening the sixth sense It can serve as the mechanism of enhancement of the sixth sense in those whose sensory systems are intact it can also serve as the mechanism of compensation in those who have sensory deficiencies In the latter case it in fact encourages creativity in the use of relatively strong senses This justifies Beethoven s deafness and his great musical creativity or Bramblitt s blindness and his enormous capability to paint and many other similar examples In summary the present book is divided into five parts Part 1 chapters 1-6 provides information about the system of proprioception and its neurophysiology and biophysics Part 2 chapters 7-10 examines the system of interoception The information provided in these two parts would enable us to move towards the next three parts of the story aimed at developing a scientific system of the sixth sense The first chapter of part 3 begins with concepts and uses them to arrive at reasonable conclusion that there must be a sense that

requires multistep information processing and that is separate from the sense of proprioception and the sense of interoception. Such sense is commonly known as the sixth sense. However, it should be re-numbered because the sense of proprioception is already known as the sixth sense. The second chapter of this part is to draw neurocircuitry that innervates the sixth sense in the mind of a man while the third chapter would address the questions whether the sixth sense system requires an optimal competence or consciousness of mind to function properly and if so which is the optimal state: conscious or unconscious and competence or incompetence. In the fourth chapter of this part we will focus on the self-other merge as a pivotal step of the sixth sense system. The next chapter would be of great interest to neurobiologists. It talks about that the human sixth sense of the unseen world either the unseen arrow of time or the unseen events requires creativity and therefore the human sixth sense should be considered a source of creativity, variability, and thus evolution. In the sixth chapter the sixth sense is viewed as an economic activity stimulated by social environments. This chapter arises from the fact that humans are full of enthusiasm to heighten their sixth sense and its accuracy and that they owe their enthusiasm largely to achieving the best possible profit and in other words to winning intense competitions in their life holds mainly on the concept of elasticity. Finally, this part is finished by an amazing discussion on the art of the sixth sense. The first chapter of part 4 discusses physical theories that support the existence of sixth sense in the universe. The next chapter is to apply the Bayes theory to the sixth sense leading to the conclusion that the sixth sense improves multisensory integration through optimizing uncertainty of information received from other sensory modalities. Chapter three in this part would address whether relative timing is applicable to the sixth sense like other senses. The last part of the book aimed at directly discussing the sixth sense into the context of human health and behavior is organized into four chapters. The first chapter is to discuss neurodevelopmental changes in the sixth sense while the second and third ones will discuss that in relation to psychiatric and neurological disorders. The most striking question: how much power does the sixth sense have over human health and behavior is addressed in the fourth chapter of this part and final chapter of the book which will be prepared using neural network models and sophisticated portraits possible for the system of sixth sense.

**Art and the Form of Life** Roy Brand, 2021-03-31. Art and the Form of Life takes a classic theme: philosophy as the art of living and gives it a contemporary twist. The book examines a series of watershed moments in artistic practice alongside philosophers' most enduring questions about the way we live. Coupling Tino Sehgal with Wittgenstein, cave art with Foucault, Stanley Kubrick with Nietzsche and the Bauhaus with Walter Benjamin, the book animates the idea that life is literally ours to make. It reflects on universal themes that connect the long histories of art and philosophy and it does so using a contemporary approach. Drawing on great philosophical works, it argues that life practiced as an art form affords an experience of meaning in the sense that it is engaging, creative, and participatory. It thus effects a fundamental renewal of experience.

**Form, Space, and Vision** Graham Collier, 1972      Colour and Form Perception:

Straddling the Boundary Galina V. Paramei, Cees van Leeuwen, 2016-05-31 Starting from psychophysics over the last 50 years most progress in unravelling the mechanisms of color vision has been made through the study of single cell responses mainly in LGN and striate cortex A similar development in the study of form perception may seem to be underway centred on the study of temporal cortex However because of the combinatorial characteristics of form perception we are also observing the opposite tendency from single cell activity to population coding and from static receptive field structures to system dynamics and integration and ultimately a synthetic form of psychophysics of color and form perception From single cells to system integration it is this development the present Research Topic wishes to highlight and promote How does this development affect our views on the various attributes of perception In particular we are interested in to what extent evolving knowledge in the field of color perception is relevant within a developing integrative framework of form perception The goal of this Research Topic is to bring together experimental research encompassing both color and form perception For this volume we planned a broad scope of topics on color in complex scenes color and form as well as dynamic aspects of form perception We expect that the Research Topic will be attractive to the community of researchers whose work straddles the boundary between the two visual perception fields as well as to the wider community interested in integrative systems neuroscience

Universe, Earth, Human Being Rudolf Steiner, 2022-10-31 The mission of our age is not to reproduce an ancient wisdom but to engender a new one a wisdom that points not only to the past but that works prophetically into the future Rudolf Steiner Beginning with ancient Egypt the pyramids and sphinxes and a comparison of that epoch with our own Rudolf Steiner surveys a vast spiritual landscape of human development In symphonic style he describes the conquest of the physical plane in post Atlantean civilizations the relationships between the various cultural epochs the human being's connections with the kingdoms of nature and the different planetary bodies and the relationship of animal forms to the physiognomy of human passions Through this panoramic vision we discover how the changed conditions of human consciousness call for a new spiritual understanding today In her Introduction Marie Steiner relates the special experience of being a member of Rudolf Steiner's audience for this timeless series of lectures Enormous cosmic pictures were unfolded before the spiritual gaze of the listeners insights were of such depths of ancient wisdom views of distant futures of human and world development that deepest devotion flowed through their hearts This new edition features a revised translation introduction notes and an index
