Formation Of The Scientific Mind:

The Formation of the Scientific Mind Gaston Bachelard, 2002 Gaston Bachelard is one of the indispensable figures in the history of 20th century ideas. The broad scope of his work has had a lasting impact in several fields: notable philosophy, architecture and literature.

Formation of the Scientific Mind Gaston Bachelard, 2001 Concept and Form, Volume 1 Peter Hallward, Knox Peden, 2012-12-12 Edited by a small group of students including Alain Badiou, Jacques Alain Miller and François Regnault at the École normale supérieure in Paris, the *Cahiers pour l'Analyse* appeared in ten volumes between 1966 to 1969. The journal was conceived as a contribution to a philosophy based on the primacy of concepts and the rigor of logic and formalization as opposed to lived experience or the interpretation of meaning. The *Cahiers* published landmark texts by the most influential thinkers of the day including Derrida, Foucault, Irigaray and Lacan and were soon recognized as one of the most significant and innovative philosophical projects of the time. The two volumes of *Concept and Form* offer the first systematic presentation and assessment of the *Cahiers* legacy in any language. The first volume translates a selection of original *Cahiers* texts.

Gaston Bachelard Cristina Chimisso, 2013-12-16 In this new study Cristina Chimisso explores the work of the French Philosopher of Science Gaston Bachelard 1884-1962 by situating it within French cultural life of the first half of the century. The book is introduced by a study based on an analysis of portraits and literary representations of how Bachelard's admirers transformed him into the mythical image of the Philosopher, the Patriarch and the Teacher of Happiness. Such a projected image is contrasted with Bachelard's own conception of philosophy and his personal pedagogical and moral ideas. This pedagogical orientation is a major feature of Bachelard's texts and one which deepens our understanding of the main philosophical arguments. The primary thesis of the book is based on the examination of the French educational system of the time and of French philosophy taught in schools and conceived by contemporary philosophers. This approach also helps to explain Bachelard's reception of psychoanalysis and his mastery of modern literature.

Gaston Bachelard *Critic of Science and the Imagination* thus allows for a new reading of Bachelard's body of work whilst at the same time providing an insight into twentieth century French culture.

Writing the History of the Mind Dr Cristina Chimisso, 2013-06-28 For much of the twentieth century French intellectual life was dominated by theoreticians and historians of mentalité. Traditionally the study of the mind and of its limits and capabilities was the domain of philosophy; however in the first decades of the twentieth century practitioners of the emergent human and social sciences were increasingly competing with philosophers in this field: ethnologists, sociologists, psychologists and historians of science were all claiming to study how people think. Scholars including Gaston Bachelard, Georges Canguilhem, Léon Brunschvicg, Lucien Lévy-Bruhl, Lucien Febvre, Abel Rey, Alexandre Koyré and Henri Metzger were all investigating the mind historically and participating in shared research projects. Yet as they have since been appropriated by the different disciplines, literature on their findings has so far failed to recognise the connections between their research and their importance in intellectual

history In this exemplary book Cristina Chimisso reconstructs the world of these intellectuals and the key debates in the philosophy of mind particularly between those who studied specific mentalities by employing prevalently historical and philological methods and those who thought it possible to write a history of the mind outlining the evolution of ways of thinking that had produced the modern mentality Dr Chimisso situates the key French scholars in their historical context and shows how their ideas and agendas were indissolubly linked with their social and institutional positions such as their political and religious allegiances their status in academia and their familial situation The author employs a vast range of original research using philosophical and scientific texts as well as archive documents correspondence and seminar minutes from the period covered to recreate the milieu in which these relatively neglected scholars made advances in the history of philosophy and science and produced ideas that would greatly influence later intellectuals such as Foucault Derrida and Bourdieu This book will appeal to historians of science and philosophy particularly Continental philosophy and those with interest in the history of ideas and the historiography of the disciplines of the social sciences

Concept and Form, Volume 1 Knox Peden, Peter Hallward, 2012-12-12 Concept and Form is a two volume monument to the work of the philosophy journal the Cahiers pour l'Analyse 1966-69 the most ambitious and radical collective project to emerge from French structuralism Inspired by their teachers Louis Althusser and Jacques Lacan the editors of the Cahiers sought to sever philosophy from the interpretation of given meanings or experiences focusing instead on the mechanisms that structure specific configurations of discourse from the psychological and ideological to the literary scientific and political Adequate analysis of the operations at work in these configurations they argue helps prepare the way for their revolutionary transformation This first volume comprises English translations of some of the most important theoretical texts published in the journal written by thinkers who would soon be counted among the most inventive and influential of their generation Alain Badiou Yves Durox Alain Grosrichard Serge Leclaire Jacques Alain Miller Jean Claude Milner and François Regnault The book is complemented by a second volume consisting of essays and interviews that assess the significance and legacy of the journal and by an online edition of the full set of original Cahiers texts produced by the Centre for Research in Modern European Philosophy at Kingston University London and accessible at cahiers.kingston.ac.uk

Primitive Thinking Nicola Gess, 2022-09-06 This book examines the discourse on primitive thinking in early twentieth century Germany It explores texts from the social sciences writings on art and language and most centrally literary works by Robert Musil Walter Benjamin Gottfried Benn and Robert Müller focusing on three figurations of alterity prominent in European primitivism indigenous cultures children and the mentally ill

Split and Splice Hans-Jörg Rheinberger, 2023-04-21 Esteemed historian and philosopher of science Hans-Jörg Rheinberger explores the incredible diversity of scientific experimentation in his new book which extends his groundbreaking epistemological studies of the life sciences and the experimental practices that have made them so productive Rheinberger explores the materiality of experiment of its objects and instruments the construction of models and myriad

ways of making things visible The first part of the book is devoted to the circumstances and conditions that give the process of experimentation its structural cachet and make it a device from which novelty can emerge Then in the second part Rheinberger focuses on the relations that experimental systems develop among each other specifically their characteristic temporal spatial and narrative dimensions The concepts that guide his investigation emerge through accessible examples most of which are drawn from molecular biology including from the author's own laboratory notebooks from his years researching ribosomes This is a tour de force by one of today's most influential theorists of scientific practice

IMAGINARIES ON MATTER: TOOLS, MATERIALS, ORIGINS Thomas Bo Jensen, Carolina Dayer, Jonathan Foote, 2023-11-21 Imaginaries on Matter Tools Materials Origins promotes an innovative architectural research agenda that connects historical cultural written research with digitally led material explorations The common thread is the notion of the material imagination disclosed in the reverie or material daydream which challenges overly pragmatic or unreflective material choices within current architectural practice In bonding our imagination directly with matter while also confronting new technologies this book promotes strategies by which architects and builders future relations with materials can stay rooted within the deeper concerns of cultural meaning Imaginaries on Matter includes interviews with Aulets Architectes Alibi Studio Ensamble Studio Geometria Helen Hard Kieran Timberlake Supermoeuvre and Vandkunsten as well as a postscript by David Leatherbarrow Edited by Thomas Bo Jensen Carolina Dayer Jonathan Foote Psychology of Science Robert W. Proctor, E.J. Capaldi, 2012-06-04 The study of science sometimes referred to as metascience is a new and growing field that includes the philosophy of science history of science sociology of science and anthropology of science In the last ten years the formal study of the psychology of science has also emerged The psychology of science focuses on the individual scientist influenced by intelligence motivation personality and the development of scientific interest thought ability and achievement over a lifespan Science can be defined as explicitly and systematically testing hypotheses Defined more broadly science includes wider processes such as theory construction and the hypothesis testing seen in children and non scientific adults Most prior work in the study of science has emphasized the role of explicit reasoning however contemporary research in psychology emphasizes the importance of implicit processes in decision making and choice and assumes that the performance of many tasks involves a complex relationship between implicit and explicit processes Psychology of Science brings together contributions from leaders in the emerging discipline of the psychology of science with other experts on the roles of implicit and explicit processes in thinking Highlighting the role of implicit processes in the creation of scientific knowledge this volume links the psychology of science to many strands of psychology including cognitive social and developmental psychology as well as neuroscience Ultimately this volume raises awareness of the psychology of science among psychologists philosophers and sociologists of science and anyone interested in the metasciences *Gaston Bachelard* Steven Connor, 2025-08-18 Exploring his life work and thought the story of this sui generis philosopher of science

This is the first English biography of Gaston Bachelard a philosopher who bridged the worlds of science and imagination Raised in rural France Bachelard served in the First World War worked for the post office and pursued degrees in science and philosophy while teaching in his local school His journey led to a professorship at the Sorbonne where he influenced many prominent postwar French thinkers Known as both a philosopher of science and author of works on the imagination inspired by the elements earth air fire and water Bachelard needed to negotiate a constant tension between science and poetry calculation and dream This biography provides a complete portrait of Bachelard illuminating his struggles with the nature of knowledge itself *The Geological Unconscious* Jason Groves,2020-07-07 Already in the nineteenth century German language writers were contending with the challenge of imagining and accounting for a planet whose volatility bore little resemblance to the images of the Earth then in circulation The Geological Unconscious traces the withdrawal of the lithosphere as a reliable setting unobtrusive backdrop and stable point of reference for literature written well before the current climate breakdown Through a series of careful readings of romantic realist and modernist works by Tieck Goethe Stifter Benjamin and Brecht Groves elaborates a geological unconscious unthought and sometimes actively repressed geological knowledge in European literature and environmental thought This inhuman horizon of reading and interpretation offers a new literary history of the Anthropocene in a period before it was named These close readings show the entanglement of the human and the lithic in periods well before the geological turn of contemporary cultural studies In those depictions of human mineral encounters the minerality of the human and the minerality of the imagination become apparent In registering libidinal investments in the lithosphere that extend beyond Carboniferous deposits and beyond any carbon imaginary The Geological Unconscious points toward alternative relations with and less destructive mobilizations of the geologic

The Psychology of Science and the Origins of the Scientific Mind Gregory J. Feist,2008-10-01 In this book Gregory Feist reviews and consolidates the scattered literatures on the psychology of science then calls for the establishment of the field as a unique discipline He offers the most comprehensive perspective yet on how science came to be possible in our species and on the important role of psychological forces in an individual s development of scientific interest talent and creativity Without a psychological perspective Feist argues we cannot fully understand the development of scientific thinking or scientific genius The author explores the major subdisciplines within psychology as well as allied areas including biological neuroscience and developmental cognitive personality and social psychology to show how each sheds light on how scientific thinking interest and talent arise He assesses which elements of scientific thinking have their origin in evolved mental mechanisms and considers how humans may have developed the highly sophisticated scientific fields we know today In his fascinating and authoritative book Feist deals thoughtfully with the mysteries of the human mind and convincingly argues that the creation of the psychology of science as a distinct discipline is essential to deeper understanding of human thought processes *Hélène Metzger, Historian and Historiographer of the Sciences* Cristina Chimisso,2019-12-05 Is there

something important to learn from the history of science about knowledge and the mind Do habits and emotions play a significant role in science To what extent do present concerns and knowledge distort our understanding of past texts and practices These are crucial questions in current debates but they are not new This monograph evaluates the answers to these and other questions that H l ne Metzger 1889 1944 provided Metzger who was the leading historian of chemistry of her generation left us unparalleled reflections on the theory practice and aims of history writing Despite her influence on subsequent generations of thinkers including Thomas Kuhn this is the first full length monograph on her Beginning with an overview of her life and the challenges faced by a Jewish woman working within academia the book goes on to discuss the most important themes of her historiography and her engagement with other disciplines notably general history philosophy ethnology and religious studies The book also explores both Metzger s immediate legacy and the relevance of her ideas for a host of current debates in science studies The Appendices include four of her historiographical papers translated into English for the first time

Historical Epistemology of Ecological Economics Alberto Fragio, 2022-03-05 This volume uses historical epistemology in order to address several topics in the history of economic thought with special emphasis on ecological economics environmental metaphors of scarcity and mathematical ecology Using the field of ecological economics as an anchor point the author reflects on the styles of reasoning in economics with a view towards understanding the nature of disagreement that stems from a failure of communication between rival approaches in economics A thorough inquiry into issues related to identity coherence pluralism and reception this volume will appeal to researchers and students interested in history of economic thought ecological economics and philosophy of the sciences

The Carousel of Time Bernard Ancori, 2020-01-02 Based around the image of a carousel this book uses epistemological

theory to tackle the paradoxical acceleration and deceleration of time that is experienced by many The consequence of this paradox is the observance of the past present and future coinciding where acceleration is combined with perfect immobility The Carousel of Time proposes a model that focuses on a complex network of individual actors and their relation to the analysis structure and evolution of our socio cognitive space time The first part of the book Foundations presents the key bases of this model as well as the notions that must be understood and integrated The book then analyzes the concept of Space defining the parameters of the network s boundaries and finishes with an exploration of Time This third part links the temporality of the network to its spatial characteristics and studies its evolution

French Studies in the Philosophy of Science Anastasios Brenner, Jean Gayon, 2009-04-14 Having examined previous volumes of the Boston Studies series devoted to different countries and having discussed the best way to present contemporary research in France we have arrived at a careful selection of 15 participants including the organizers Our aim is to bring together philosophers and practicing scientist from the major institutions of the country both universities and research centers The areas of research represented here cover a wide spectrum of sciences from mathematics and physics to the life sciences as well as linguistics and economics This selection is a showcase of French philosophy of science illustrating the different methods employed logico linguistic analysis rational reconstruction and historical inquiry These participants have the ability to relate their research both to the French tradition and current discussions on the international scene Also included is a substantial historical introduction explaining the development of philosophy of science in France the various schools of thought and methods as well as the major concepts and their significance

The Concept of Model Alain Badiou, 2007 In *The Concept of Model* Alain Badiou establishes a new logical concept of model Translated for the first time into English the work is accompanied by an exclusive interview with Badiou in which he elaborates on the connections between his early and most recent work for which the concept of model remains seminal

History of Rationalities Luca Sciortino, 2023-03-11 Over time philosophers and historians of science have introduced different notions of ways of thinking This book presents compares and contrasts these different notions It focuses primarily on Ian Hacking s idea of style of reasoning in order to assess and develop it into a more systematic theory of scientific thought arguing that Hacking s theory implies epistemic relativism Luca Sciortino also discusses the implications of Hacking s ideas for the study of the problem of contingency and inevitability in the development of scientific knowledge
