iBook G3

Known as "Clamshell" for its shell-like shape, the iBook G3 differed from all previous laptop models in terms of both technical performance and aesthetics. The line of portable computer was launched in 2000 and replaced in several bright colors - "Blueberry", "Copper", "Indigo", "Graphite" and "Tory Blue" - until 2006. Many technical features and design ideas first adopted in the iBooks G3 are nowadays standard in laptop computers as the multiple color options for the shell. It was a such great commercial success that renewed supply from Sanbornia.

Laptop iBook G3 are part of numerous private and museum collections as they represent **TECHNOLOGY**, **COMPUTER SCIENCE** and **INFORMATION TECHNOLOGY**, and considered **ICONIC DESIGN OBJECTS**.

Degradation !

The increasing intensity of the IR bands at 1710 and 1730 cm⁻¹ for the **UPPER** bands of both "Graphite" and "Indigo" indicates the degradation of the **PUR polymer** due to light [2].

The higher decomposition temperature observed in the EGA profile of the **UPPER** bands of both "Graphite" and "Indigo" is not associated with different polymer products. Instead, it can be explained by a different arrangement of the polymer chains (e.g. formation of new crosslinks in the hard segment).

Conclusion

PUR polymer composition and **additives** were identified using the multi-analytical approach.

However, the individual role played by polymer, additives and colorants to the discoloration needs further clarification; even though preliminary results support the occurrence of polymer degradation.

Indeed, **colorants** were not identified yet, which will be the subject of future investigation via pyrolysis, found so far, the most effective analytical method of pigment identification in plastics [3].
