Classical Methods of Statistics Otto J.W.F. Kardaun, 2005-12-12 Classical Methods of Statistics is a guidebook combining theory and practical methods. It is especially conceived for graduate students and scientists who are interested in the applications of statistical methods to plasma physics. Thus it provides also concise information on experimental aspects of fusion oriented plasma physics. In view of the first three basic chapters it can be fruitfully used by students majoring in probability theory and statistics. The first part deals with the mathematical foundation and framework of the subject. Some attention is given to the historical background. Exercises are added to help readers understand the underlying concepts. In the second part two major case studies are presented which exemplify the areas of discriminant analysis and multivariate profile analysis respectively. To introduce these case studies an outline is provided of the context of magnetic plasma fusion research. In the third part an overview is given of statistical software; separate attention is devoted to SAS and S PLUS. The final chapter presents several datasets and gives a description of their physical setting. Most of these datasets were assembled at the ASDEX Upgrade Tokamak. All of them are accompanied by exercises in form of guided minor case studies. The book concludes with translations of key concepts into several languages.

The Perversity of Things Hugo Gernsback, 2016-11-21 In 1905 a young Jewish immigrant from Luxembourg founded an electrical supply shop in New York. This inventor, writer, and publisher Hugo Gernsback would later become famous for launching the first science fiction magazine, *Amazing Stories*, in 1926. But while science fiction's annual Hugo Awards were named in his honor, there has been surprisingly little understanding of how the genre began among a community of tinkerers all drawn to Gernsback's vision of comprehending the future of media through making. In *The Perversity of Things*, Grant Wythoff makes available texts by Hugo Gernsback that were foundational both for science fiction and the emergence of media studies. Wythoff argues that Gernsback developed a means of describing and assessing the cultural impact of emerging media long before media studies became an academic discipline. From editorials and blueprints to media histories, critical essays, and short fiction, Wythoff has collected a wide range of Gernsback's writings that have been out of print since their magazine debut in the early 1900s. These articles cover such topics as television, the regulation of wireless radio, war and technology, speculative futures, media archaeological curiosities like the dynamophone and hypnobioscope, and more. All together, this collection shows how Gernsback's publications evolved from an electrical parts catalog to a full-fledged literary genre. *The Perversity of Things* aims to reverse the widespread misunderstanding of Gernsback within the history of science fiction criticism. Through painstaking research and extensive annotations and commentary, Wythoff reintroduces us to Gernsback and the origins of science fiction.

The Laboratory Revolution and the Creation of the Modern University, 1830-1940 Klaas Berkel, Ernst Homburg, 2025-10-01 The modern research university originated in Europe in the second half of the nineteenth century largely due to the creation and expansion of the teaching and research laboratory. The universities and the sciences

underwent a laboratory revolution that fundamentally changed the nature of both This revolutionary development began in chemistry where Justus Liebig is credited with systematically employing his students in his ongoing research during the 1830s Later this development spread to other fields including the social sciences and the humanities The consequences for the universities were colossal The expansion of the laboratories demanded extensive new building programs reshaping the outlook of the university The social structure of the university also diversified because of this laboratory expansion while what it meant to be a scientist changed dramatically This volume explores the spatial social and cultural dimensions of the rise of the modern research laboratory within universities and their consequent reshaping
