

Explain the difference between foundationalism and coherentism and defend whichever view you find more plausible

Throughout this essay I will aim to explain the difference between foundationalism and coherentism and defend foundationalism as the stronger view. To achieve this, I will firstly discuss the epistemic regress problem, a central issue within epistemology that both foundationalists and coherentists aim to solve. Secondly, I will outline the differences between foundationalism and coherentism, focusing on the structural distinctions between both theories and how this relates to justification. Finally, I will assess both theories by drawing upon notable criticisms and pragmatic defences from various scholars, in an attempt to highlight the failure of coherentism in addressing the regress problem and present foundationalism as the more plausible account.

The epistemic regress problem is an age-old issue that western philosophers have grappled with since its early developments in Ancient Greek philosophy. In Aristotle's *Posterior Analytics*, he uses the regress argument to highlight the necessity of basic beliefs in offering an account of justification for a particular belief. Aristotle maintains that a belief is justified if it is supported by a basic belief that does not require any justification as it is a self-containing belief, marking the beginning of foundationalism as a system of justification in Epistemology (Huemer and Audi, 2002). The regress problem was also discussed amongst prominent skeptics such as Sextus Empiricus who wrote about the issue in his *Outlines of Pyrrhonism*, as a way to challenge "Dogmatic" philosophers who believed that truth can be discovered (Huemer and Audi, 2002). He uses the regress problem to showcase the impossibility of knowledge, positing that finding an answer to any philosophical problem is only a mere aspiration and not an achievable goal. Philosophers such as Bonjour and Klein in the 20th century - unsatisfied with earlier responses to the regress problem - developed alternative systems of justification known respectively as coherentism and infinitism. For the purpose of this essay, I will focus on coherentism and foundationalism.

Before outlining the regress problem, it is important to note that the regress argument assumes justification to be an important criterion for knowledge, as knowledge is classically understood to be justified true belief (Bonjour, 1985). Therefore, for a belief to be justified, a person would have to have good reasons for believing in a given proposition, showcasing this through a justificatory argument. A belief (*p*) cannot be justified if there is no sufficient support for *p*, for instance if a person is asked why they hold *p* and the response is - it is a guess, or they saw it in a dream, *p* would not be justified. This would be the case even if the belief in question were to actually be true, suggesting that justification is far more than holding a true belief (Bonjour, 1985). Equally, a false
