Foundations Of Animal Behavior Classic Papers With Commentaries:

Foundations of Animal Behavior Lynne D. Houck, Lee C. Drickamer, 1996-08 Beginning with Darwin's work in the 1870s *Foundations of Animal Behavior* selects the most important works from the discipline's first hundred years: forty-four classic papers and presents them in facsimile, tracing the development of the field. These papers are classics because they either founded a line of investigation, established a basic method, or provided a new approach to an important research question. The papers are divided into six sections, each introduced by prominent researchers. Sections one and two cover the origins and history of the field and the emergence of basic methods and approaches. They provide a background for sections three through six, which focus on development and learning, neural and hormonal mechanisms of behavior, sensory processes, orientation and communication, and the evolution of behavior. This outstanding collection will serve as the basis for undergraduate and graduate seminars and as a reference for researchers in animal behavior, whether they focus on ethology, behavioral ecology, comparative psychology, or anthropology. Published in association with the Animal Behavior Society.

Being Human Anna L. Peterson, 2001-05-26 *Being Human* examines the complex connections among conceptions of human nature, attitudes toward non-human nature, and ethics. Anna Peterson proposes an ethical anthropology that examines how ideas of nature and humanity are bound together in ways that shape the very foundations of cultures. Peterson discusses mainstream Western understandings of what it means to be human, as well as alternatives to these perspectives, and suggests that the construction of a compelling, coherent environmental ethics will revise our ideas not only about nature but also about what it means to be human.

Guide to Reference and Information Sources in the Zoological Sciences Diane Schmidt, 2003-11-30 Animals have been studied for centuries. But what are the most important and relevant reference and information sources in the zoological sciences? This work is a comprehensive, thoroughly annotated directory filled with hundreds of esteemed resources published in the field of zoology, including indexes, abstracts, bibliographies, journals, biographies, and histories, dictionaries and encyclopedias, textbooks, checklists, and classification schemes, handbooks, and field guides, associations, and Web sites. A complete revision of the award-winning *Guide to the Zoological Literature: The Animal Kingdom* 1994, this new title includes extensive, up-to-date coverage of invertebrates, arthropods, vertebrates, fishes, amphibians, and reptiles, birds, and mammals. In addition, the work features a detailed introduction by the author, as well as thorough subject, title, and author indexes. Students and researchers can now quickly and easily pinpoint works in their field of study. The book is of equal importance to LIS students specializing in science or biology librarianship, as it provides a comprehensive, straight-forward overview of zoological information sources. An essential addition to the core reference collection of public and academic libraries.

The Nature & Nurture of Love Marga Vicedo, 2022-12-22 The notion that maternal care and love will determine a child's emotional well-being and future personality has become ubiquitous. In countless stories and movies, we find that the problems of the protagonists, anything from the fear of romantic commitment to

serial killing stem from their troubled relationships with their mothers during childhood How did we come to hold these views about the determinant power of mother love over an individual s emotional development And what does this vision of mother love entail for children and mothers In *The Nature and Nurture of Love* Marga Vicedo examines scientific views about children s emotional needs and mother love from World War II until the 1970s paying particular attention to John Bowlby s ethological theory of attachment behavior Vicedo tracks the development of Bowlby s work as well as the interdisciplinary research that he used to support his theory including Konrad Lorenz s studies of imprinting in geese Harry Harlow s experiments with monkeys and Mary Ainsworth s observations of children and mothers in Uganda and the United States Vicedo s historical analysis reveals that important psychoanalysts and animal researchers opposed the project of turning emotions into biological instincts Despite those substantial criticisms she argues that attachment theory was paramount in turning mother love into a biological need This shift introduced a new justification for the prescriptive role of biology in human affairs and had profound and negative consequences for mothers and for the valuation of mother love

Advances in Psychological Science, Volume 2 Fergus Craik, Michele Robert, Michel Sabourin, 2014-01-21 The chapters in this volume are the edited versions of invited addresses to the XXVI International Congress of Psychology held in Montr al in August 1996 As one major goal of the Congress was to promote communication among specializations in scientific psychology the speakers were asked to survey their research area and present their own work in a way that would be accessible to their colleagues in other areas Another purpose of the meeting was to bring researchers together from different parts of the world reflecting their different approaches to the scientific study of mind brain and behavior Consequently the eminent researchers who have written the twenty six chapters included in the present volume were drawn from universities and research institutes in North America Europe Japan Russia Israel and New Zealand The chapters cover a range of topics in human and animal experimental psychology The first section deals with psychobiological processes the interplay of body and mind in determining intelligence stress and pain The next five chapters address current issues in neuropsychology and neuroscience including the neural correlates of attention and vision A third section looks at learning processes in humans and animals and a fourth deals with a range of topics in perception and cognition The final five chapters take a developmental perspective presenting theoretical and empirical analyses of the acquisition of perceptual and cognitive abilities Overall the collection illustrates the growing trend to break down traditional barriers between areas of experimental psychology there are many instances of profitable interactions between researchers studying aspects of behavior and those studying the biological bases of these behaviors The twenty six chapters give an excellent overview of current research in scientific psychology

Being Animal Anna Peterson, 2013-05-21 For most people animals are the most significant aspects of the nonhuman world They symbolize nature in our imaginations in popular media and culture and in campaigns to preserve wilderness yet scholars habitually treat animals and the environment as mutually exclusive objects of concern Conducting the first examination of animals place in popular and scholarly thinking about nature Anna L Peterson builds a nature ethic that conceives of nonhuman animals as active subjects who are simultaneously parts of both nature and human society Peterson explores the tensions between humans and animals nature and culture animals and nature and domesticity and wildness She uses our intimate connections with companion animals to examine nature more broadly Companion animals are liminal creatures straddling the boundary between human society and wilderness revealing much about the mutually constitutive relationships binding humans and nature together Through her paradigm shifting reflections Peterson disrupts the artificial boundaries between two seemingly distinct categories underscoring their fluid and continuous character

The Imaginary of Animals Annabelle Dufourcq, 2021-07-29 This book explores the phenomenon of animal imagination and its profound power over the human imagination It examines the structural and ethical role that the human imagination must play to provide an interface between humans subjectivity and the real cognitive capacities of animals The book offers a systematic study of the increasing importance of the metaphors the virtual and figures in contemporary animal studies It explores human animal and real imaginary dichotomies revealing them to be the source of oppressive cultural structures Through an analysis of creative playful and theatric enactments and mimicry of animal behaviors and communication the book establishes that human imagination is based on animal imagination This helps redefine our traditional knowledge about animals and presents new practices and ethical concerns in regard to the animals The book strongly contends that allowing imagination to play a role in our relation to animals will lead to the development of a more empathetic approach towards them Drawing on works in phenomenology contemporary animal philosophy as well as ethological evidence and biosemiotics this book is the first to rethink the traditional philosophical concepts of imagination images the imaginary and reality in the light of a zoocentric perspective It will appeal to philosophers scholars and students in the field of animal studies as well as anyone interested in human and non human imaginations

Seven Challenges for the Science of Animal Minds Mike

Dacey,2025-01-28 The scientific study of animal minds is difficult This book examines the most significant reasons this is so seven challenges for the science to overcome Researchers are aware of these challenges but few take any of them head on and none address them collectively Despite this focus on challenges the book s attitude is optimistic rather than critical these are challenges for the science not challenges to the science Researchers have made substantial progress as things are But taking the challenges head on can help build an even stronger more vibrant science The seven challenges are 1 underdetermination of theory by data 2 anthropomorphic bias 3 the difficulty of modeling cognitive processes 4 integrating across disciplines 5 ecological validity 6 small sample sizes and 7 measuring consciousness For each the book suggests rethinking the challenge and reorienting our attempts to address it These approaches are novel general ways of thinking that will help researchers work through the challenges and perhaps find solutions appropriate to their own research Each of the main chapters takes on one challenge Each also includes an empirical case study from social reasoning in chimpanzees to foraging in honeybees to consciousness in octopuses Along the way a big picture framework emerges for drawing conclusions about animal minds based on experimental evidence In this framework the role of any individual piece of the science is limited any individual experiment model claim or argument can only tell us so much When we are appropriately modest about each piece conclusions about animal minds must be arrived at by holistically considering all the evidence we can get This is a work in the philosophy of science but it is written to be accessible to any philosopher interested in empirical issues relating to the mind researchers in any of the related sciences including psychology neuroscience ethology and evolutionary biology as well as intermediate to advanced students

Entangled Life Gillian Barker,Eric Desjardins,Trevor Pearce,2013-09-05 This volume explores the interactions between organisms and their environments and how this entanglement is a fundamental aspect of all life It brings together

the work and ideas of historians philosophers biologists and social scientists uniting a range of new perspectives methods and frameworks for examining and understanding the ways that organisms and environments interact The volume is organized into three main sections historical perspectives contested models and emerging frameworks The first section explores the origins of the modern idea of organism environment interaction in the mid nineteenth century and its development by later psychologists and anthropologists In the second section a variety of controversial models from mathematical representations of evolution to model organisms in medical research are discussed and reframed in light of recent questions about the interplay between organisms and environment The third section investigates several new ideas that have the potential to reshape key aspects of the biological and social sciences Populations of organisms evolve in response to changing environments bodies and minds depend on a wide array of circumstances for their development cultures create complex relationships with the natural world even as they alter it irrevocably The chapters in this volume share a commitment to unraveling the mysteries of this entangled life Appetite and Its Discontents Elizabeth A.

Williams,2020-04-15 Why do we eat Is it instinct Despite the necessity of food anxieties about what and how to eat are widespread and persistent In Appetite and Its Discontents Elizabeth A Williams explores contemporary worries about eating through the lens of science and medicine to show us how appetite once a matter of personal inclination became an object of science Williams charts the history of inquiry into appetite between 1750 and 1950 as scientific and medical concepts of appetite shifted alongside developments in physiology natural history psychology and ethology She shows how in the eighteenth century trust in appetite was undermined when researchers who investigated ingestion and digestion began claiming that science alone could say which ways of eating were healthy and which were not She goes on to trace nineteenth and twentieth century conflicts over the nature of appetite between mechanists and vitalists experimentalists and bedside physicians and localists and holists illuminating struggles that have never been resolved By exploring the core disciplines in investigations in appetite and eating Williams reframes the way we think about food nutrition and the nature of health itself
