Foundations Of Artificial Intelligence A Sourcebook:

The Foundations of Artificial Intelligence Derek Partridge, Yorick Wilks, 1990-04-26 This outstanding collection is designed to address the fundamental issues and principles underlying the task of Artificial Intelligence The Foundations of Artificial Intelligence: a Source Book Derek Partridge, Wilks Yorick, 1990 Theoretical Foundations of Artificial General Intelligence Pei Wang, Ben Goertzel, 2012-08-31 This book is a collection of writings by active researchers in the field of Artificial General Intelligence on topics of central importance in the field Each chapter focuses on one theoretical problem proposes a novel solution and is written in sufficiently non technical language to be understandable by advanced undergraduates or scientists in allied fields This book is the very first collection in the field of Artificial General Intelligence AGI focusing on theoretical conceptual and philosophical issues in the creation of thinking machines All the authors are researchers actively developing AGI projects thus distinguishing the book from much of the theoretical cognitive science and AI literature which is generally quite divorced from practical AGI system building issues And the discussions are presented in a way that makes the problems and proposed solutions understandable to a wide readership of non specialists providing a distinction from the journal and conference proceedings literature The book will benefit AGI researchers and students by giving them a solid orientation in the conceptual foundations of the field which is not currently available anywhere and it would benefit researchers in allied fields by giving them a high level view of the current state of thinking in the AGI field Furthermore by addressing key topics in the field in a coherent way the collection as a whole may play an important role in guiding future research in both theoretical and practical AGI and in linking AGI research with work in allied disciplines

Artificial Intelligence Ronald Chrisley, Sander Begeer, 2000 **AI and Cognitive Science '90** Michael F. McTear, Norman Creaney, 2013-03-14 This book contains the edited versions of papers presented at the 3rd Irish Conference on Artificial Intelligence and Cognitive Science which was held at the University of Ulster at Jordanstown Northern Ireland on 20 21 September 1990 The main aims of this annual conference are to promote AI research in Ireland to provide a forum for the exchange of ideas amongst the different disciplines concerned with the study of cognition and to provide an opportunity for industry to see what research is being carried out in Ireland and how they might benefit from the results of this research Although most of the participants at the conference came from universities and companies within Ireland a positive feature of the conference was the extent of interest shown outside of Ireland resulting in participants from USA Canada Austria and England The keynote speakers were Professor David Chin University of Hawaii and Professor Derek Partridge University of Exeter and the topics included machine learning AI tools and methods expert systems speech vision natural language reasoning with uncertain information and explanation The sponsors of the conference were Digital Equipment Co Galway and the Industrial Development Board for Northern Ireland The Philosophy of Science: A-M Sahotra Sarkar, Jessica Pfeifer, 2006 The first in depth reference to the field that combines scientific knowledge with

philosophical inquiry this encyclopedia brings together a team of leading scholars to provide nearly 150 entries on the essential concepts in the philosophy of science The areas covered include biology chemistry epistemology and metaphysics physics psychology and mind the social sciences and key figures in the combined studies of science and philosophy Midwest

The SAGE Handbook of Human-Machine Communication Andrea L. Guzman, Rhonda McEwen, Steve Jones, 2023-06-01 The SAGE Handbook of Human Machine Communication has been designed to serve as the touchstone text for researchers and scholars engaging in new research in this fast developing field Chapters provide a comprehensive grounding of the history methods debates and theories that contribute to the study of human machine communication Further to this the Handbook provides a point of departure for theorizing interactions between people and technologies that are functioning in the role of communicators and for considering the theoretical and methodological implications of machines performing traditionally human roles This makes the Handbook the first of its kind and a valuable resource for students and scholars across areas such as communication media and information studies and computer science as well as for practitioners engineers and researchers interested in the foundational elements of this emerging field Part 1 Histories and Trajectories Part 2 Approaches and Methods Part 3 Concepts and Contexts Part 4 Technologies and Applications

Cognitive Science Bruno G. Bara, 2016-07-07 Originally published in 1995 this book is about the conduct of cognitive science rather than what cognitive science is It has three main objectives First it describes the birth of cognitive science Second it outlines the method of enquiry which characterises and defines cognitive science This method uses the techniques of artificial intelligence based on the assumption that mental activity can in principle be reproduced by a computer program Third the book describes the state of the art in relevant areas with particular attention to application fields such as pedagogics human machine interaction and psychotherapy The developmental approach is emphasised and highlights the fact that developmental aspects are essential in order to comprehend the steady mode of functioning achieved once a person has reached total maturity Cognitive science is not presented as a definitive method for the analysis of the mind though the author's conclusion is that it is the best of all possible methods today At the time of publication this book would have been useful as an advanced textbook for students on courses specialising in cognitive science and as a source of further information for those working in related areas such as cognitive psychology linguistics and computer science It will still be of interest to experts and students in the field of cognitive science

Words and Intelligence II Khurshid Ahmad, Christopher Brewster, Mark Stevenson, 2007-05-16 Yorick Wilks is a central figure in the fields of Natural Language Processing and Artificial Intelligence This book celebrates Wilks's career from the perspective of his peers in original chapters each of which analyses an aspect of his work and links it to current thinking in that area This volume forms a two part set together with Words and Intelligence I Selected Works by

Yorick Wilks by the same editors **The Machine Question** David J. Gunkel, 2017-09-08 An investigation into the assignment of moral responsibilities and rights to intelligent and autonomous machines of our own making One of the enduring concerns of moral philosophy is deciding who or what is deserving of ethical consideration Much recent attention has been devoted to the animal question consideration of the moral status of nonhuman animals In this book David Gunkel takes up the machine question whether and to what extent intelligent and autonomous machines of our own making can be considered to have legitimate moral responsibilities and any legitimate claim to moral consideration The machine question poses a fundamental challenge to moral thinking questioning the traditional philosophical conceptualization of technology as a tool or instrument to be used by human agents Gunkel begins by addressing the question of machine moral agency whether a machine might be considered a legitimate moral agent that could be held responsible for decisions and actions He then approaches the machine question from the other side considering whether a machine might be a moral patient due legitimate moral consideration Finally Gunkel considers some recent innovations in moral philosophy and critical theory that complicate the machine question deconstructing the binary agent patient opposition itself Technological advances may prompt us to wonder if the science fiction of computers and robots whose actions affect their human companions think of HAL in 2001 A Space Odyssey could become science fact Gunkel's argument promises to influence future considerations of ethics ourselves and the other entities who inhabit this world **Artificial Intelligence and Normative Challenges** Angelos

Kornilakis, Georgios Nouskalis, Vassilis Pergantis, Themistoklis Tzimas, 2023-11-20 Artificial intelligence AI both in its current comparatively limited form and even more so in its potential future forms such as general and superintelligence has raised both concerns and hopes Its actual and potential consequences are increasingly far reaching affecting almost every facet of human life on a collective and individual level from the use of mobile phones and social media to autonomous weapons and from the digitalization of knowledge and information to the patentability of AI innovations unexpected philosophical ontological political and legal questions continue to arise This book offers an insightful and essential guide to the scientific questions that are shaping humanity's present and future Presenting a collection of academic essays written by prominent scholars it addresses the major legal issues concerning AI its impact on a wide range of human behavior and the general legal response including questions on AI and legal personhood responsibility liability and culpability in the age of AI the challenges AI poses for intellectual property regimes human rights challenges and AI's impact on jus ad bellum and jus in bello Given its scope the book will appeal to researchers scholars and practitioners seeking a guide to this rapidly transforming landscape *Discovery Science* Setsuo Arikawa, Hiroshi Motoda, 1998-11-25 This book constitutes the refereed proceedings of the First International Conference on Discovery Science DS 98 held in Fukuoka Japan in December 1998 The volume presents 28 revised full papers selected from a total of 76 submissions Also included are five invited contributions and 34 selected poster presentations The ultimate goal of DS 98 and this volume is to establish discovery science as a new

field of research and development The papers presented relate discovery science to areas as formal logic knowledge processing machine learning automated deduction searching neural networks database management information retrieval intelligent network agents visualization knowledge discovery data mining information extraction etc

The Quest for a Universal Theory of Intelligence Christian Hugo Hoffmann, 2022-05-09 Recent findings about the capabilities of smart animals such as corvids or octopi and novel types of artificial intelligence AI from social robots to cognitive assistants are provoking the demand for new answers for meaningful comparison with other kinds of intelligence This book fills this need by proposing a universal theory of intelligence which is based on causal learning as the central theme of intelligence The goal is not just to describe but mainly to explain queries like why one kind of intelligence is more intelligent than another whatsoever the intelligence Shiny terms like strong AI superintelligence singularity or artificial general intelligence that have been coined by a Babylonian confusion of tongues are clarified on the way

Evaluating Natural Language Processing Systems Karen Sparck Jones, Julia R. Galliers, 1995 This book is about the patterns of connections between brain structures It reviews progress on the analysis of neuroanatomical connection data and presents six different approaches to data analysis The results of their application to data from cat and monkey cortex are explored This volume sheds light on the organization of the brain that is specified by its wiring

Executive Guide to Preventing Information Technology Disasters Richard Ennals, 2012-12-06 Recent and well publicised disasters have highlighted the fact that organisations of all kinds from healthcare to aerospace are critically dependent on Information Technology systems The prevention of catastrophic I T failure is now an essential part of management In this thought provoking guide for executives and managers Richard Ennals argues that the critical factor is not technology but people and communication

Gaming the System David J. Gunkel, 2018-05-09 1 This extremely multidisciplinary book engages descriptive and prescriptive methods of study to video games drawing heavily on philosophical traditions It will have appeal outside of Film Media and Philosophy to other areas of scholarly research including Sociology Anthropology and Political Science 2 The author is a senior scholar with extensive publications that explore the intersection of philosophy and ethics with digital games and reality He has a strong presence on Facebook and Twitter as well as a well designed personal website He has historically been very engaged with his own digital and social media marketing for books he authors and plans to do the same for this title 3 The author works to debunk and reframe what readers think they know about video games and digital culture showing that it is wrong or at least misguided and that the important questions are often far more interesting and potentially disturbing than anticipated

Exploring Natural Language Gerald Nelson, Sean Wallis, Bas Aarts, 2002-06-27 ICE GB is a 1 million word corpus of contemporary British English It is fully parsed and contains over 83 000 syntactic trees Together with the dedicated retrieval software ICECUP ICE GB is an unprecedented resource for the study of English syntax Exploring Natural Language is a comprehensive guide to

both corpus and software It contains a full reference for ICE GB The chapters on ICECUP provide complete instructions on the use of the many features of the software including concordancing lexical and grammatical searches sociolinguistic queries random sampling and searching for syntactic structures using ICECUP s Fuzzy Tree Fragment models Special attention is given to the principles of experimental design in a parsed corpus Six case studies provide step by step illustrations of how the corpus and software can be used to explore real linguistic issues from simple lexical studies to more complex syntactic topics such as noun phrase structure verb transitivity and voice **Challenges to Theoretical Psychology** International Society for Theoretical Psychology.
