Foundations Of Mathematics Other Logic:

The Logical Foundations of Mathematics William S. Hatcher, 2014-05-09 The Logical Foundations of Mathematics offers a study of the foundations of mathematics stressing comparisons between and critical analyses of the major non constructive foundational systems The position of constructivism within the spectrum of foundational philosophies is discussed along with the exact relationship between topos theory and set theory Comprised of eight chapters this book begins with an introduction to first order logic In particular two complete systems of axioms and rules for the first order predicate calculus are given one for efficiency in proving metatheorems and the other in a natural deduction style for presenting detailed formal proofs A somewhat novel feature of this framework is a full semantic and syntactic treatment of variable binding term operators as primitive symbols of logic Subsequent chapters focus on the origin of modern foundational studies Gottlob Frege s formal system intended to serve as a foundation for mathematics and its paradoxes the theory of types and the Zermelo Fraenkel set theory David Hilbert s program and Kurt G del s incompleteness theorems are also examined along with the foundational systems of W V Quine and the relevance of categorical algebra for foundations This monograph will be of interest to students teachers practitioners and researchers in mathematics

The Foundations of Mathematics and Other Logical Essays Frank Plumpton Ramsey, 1931 **Foundations of Mathematical Logic** Haskell Brooks Curry, 1977-01-01 Written by a pioneer of mathematical logic this comprehensive graduate level text explores the constructive theory of first order predicate calculus It covers formal methods including algorithms and epitheory and offers a brief treatment of Markov s approach to algorithms It also explains elementary facts about lattices and similar algebraic systems 1963 edition **SET THEORY AND FOUNDATIONS OF MATHEMATICS** DOUGLAS. PORTER CENZER (CHRISTOPHER. ZAPLETAL, JINDRICH.), 2025

Mathematical Logic and the Foundations of Mathematics G. T. Kneebone, 1963 **Foundations of Set Theory** A.A. Fraenkel, Y. Bar-Hillel, A. Levy, 1973-12-01 Foundations of Set Theory discusses the reconstruction undergone by set theory in the hands of Brouwer Russell and Zermelo Only in the axiomatic foundations however have there been such extensive almost revolutionary developments This book tries to avoid a detailed discussion of those topics which would have required heavy technical machinery while describing the major results obtained in their treatment if these results could be stated in relatively non technical terms This book comprises five chapters and begins with a discussion of the antinomies that led to the reconstruction of set theory as it was known before It then moves to the axiomatic foundations of set theory including a discussion of the basic notions of equality and extensionality and axioms of comprehension and infinity The next chapters discuss type theoretical approaches including the ideal calculus the theory of types and Quine s mathematical logic and new foundations intuitionistic conceptions of mathematics and its constructive character and metamathematical and semantical approaches such as the Hilbert program This book will be of interest to mathematicians logicians and statisticians
