Eysenck, Irene Martin, 2013-11-11 In this book we have attempted to confront a number of issues that are intimately related to the theoretical basis of behavior therapy We believe that behavior therapy is an extremely efficient procedure for the treatment of neurotic disorders that it is based on certain principles derived from learning theory and that it is unique in using basic scientific principles in psychology in the service of applied and practical ends We believe that we are here dealing with much more than the advantageous use of serendipitous borrowings from nonexistent principles the cookbook collection of precepts methods and working rules that happen to have lasting effects We also believe that there is truly a general principle underlying behavior therapy rather than a varied mass of nonintegrated therapies that have little in common other than a name These beliefs are often contested but usually those who oppose them do so on the basis of misconceptions and misunderstandings that indicate a lack of knowledge of fundamental facts It is the purpose of this book to remove these misconceptions and misunderstandings and to bring up to date our knowledge in certain fundamental areas of learning theory behavior therapy and the biological foundations of personality and individual

differences There are three major groups of misconceptions and misunderstandings The first of these relates to beliefs held by many psychiatrists and cognitive psychologists relating to behavior therapy
