Model Reduction Methods for Vector Autoregressive Processes Ralf Brüggemann, 2004-01-14 Vector Autoregressive VAR models have become one of the dominant tools for the empirical analysis of macroeconomic time series Sometimes the flexibility of VAR models leads to overparameterized models making accurate estimates of impulse responses and forecasts difficult This book introduces a variety of data based model reduction methods and provides a detailed investigation of different reduction strategies in the context of popular VAR modelling classes including stationary cointegrated and structural VAR models VAR practitioners benefit from guidelines being developed for using model reduction in applied work The use of different reduction techniques is illustrated by means of empirical models for US monetary policy shocks and a structural vector error correction model of the German labor market

Blockchain: Empowering Secure Data Sharing Meng Shen, Liehuang Zhu, Ke Xu, 2020-07-15

With the development of big data data sharing has become increasingly popular and important in optimizing resource allocation and improving information utilization However the expansion of data sharing means there is an urgent need to address the issue of the privacy protection an area where the emerging blockchain technology offers considerable advantages Although there are a large number of research papers on data sharing modeling and analysis of network security there are few books dedicated to blockchain based secure data sharing Filling this gap in the literature the book proposes a new data sharing model based on the blockchain system which is being increasingly used in medical and credit reporting contexts It describes in detail various aspects of the model including its role transaction structure design secure multi party computing and homomorphic encryption services and incentive mechanisms and presents corresponding case studies The book explains the security architecture model and the practice of building data sharing from the blockchain infrastructure allowing readers to understand the importance of data sharing security based on the blockchain framework as well as the threats to security and privacy Further by presenting specific data sharing case studies it offers insights into solving data security sharing problems in more practical fields The book is intended for readers with a basic understanding of the blockchain infrastructure consensus mechanisms smart contracts secure multiparty computing homomorphic encryption and image retrieval technologies
