Motivation and Self-regulation in Sport and Exercise Chris Englert, Ian Taylor, 2021-06-07. The ability to effectively use one's thoughts, emotions, and motivation to enhance performance and well-being is one of the most important skills in sport and exercise contexts. *Motivation and Self-Regulation in Sport and Exercise* explores the theories, research, and processes that underpin these self-regulatory and motivational processes. A deeper understanding of motivation and self-regulation has far-reaching implications, from helping individuals to begin an active lifestyle to seasoned athletes looking for a competitive edge. For the first time, the globally leading researchers in this research field come together to provide their unique cutting-edge insight into how to exercise or perform more effectively. In doing so, the book provides new insight into established theories of motivation and self-regulation but also breaks new ground by inspecting lesser-known or emerging paradigms. This book is intended for all scholars interested in self-regulation and motivation, from undergraduate students to experienced researchers as well as practicing sport and exercise psychologists, coaches, and athletes.

Frontiers of Identity Robin Cohen, 2024-02-09. Originally published in 1994, this book considers one of the enduring themes of social science: How is a national identity forged and sustained? How does it change over time? Who is included in the body politic, and who is socially excluded?
