Long Covid With Traditional Chinese Medicine Peilin Sun,2022-12-22 According to the World Health Organization WHO COVID 19 and Long COVID will remain conditions of great concern for medical practitioners for the foreseeable future Mainstream treatments recommended for less severe cases of COVID 19 infection include isolation and taking over the counter or prescription painkillers while more severe cases may require hospitalization and treatments such as ventilation The long term impact of post viral conditions such as Long COVID is only beginning to emerge and so far no effective biomedical treatment methods have been identified Mainstream treatment is effective but to what extent Is there another course of treatment available for patients who do not respond well to mainstream treatments Traditional Chinese Medicine TCM is an alternative due to its history of effectiveness in treating various viral infections such as hepatitis mumps the common cold and herpes zoster Yet although TCM has advantages in effectively regulating immunity few practitioners have enough advanced knowledge in treating COVID 19 and Long COVID using TCM methods This book aims to provide TCM practitioners with comprehensive elaborate and up to date information and training to manage COVID 19 and Long COVID complaints Each chapter provides detailed discussions on complete clinical patterns of COVID 19 wide coverage on Long COVID treatments Chinese herbs and its corresponding acupuncture treatment provision of various clinical modifications and valuable clinical case studies Primary Care E-Book Terry Mahan Buttar,JoAnn Trybulski,Patricia Polgar-Bailey,Joanne Sandberg-Cook,2019-11-04 Primary Care E Book **Introduction to Basics of Pharmacology and Toxicology** Abialbon

Paul, Nishanthi Anandabaskar, Jayanthi Mathaiyan, Gerard Marshall Raj, 2021-03-13 This book explains the pharmacological relationships between the various systems in the human body. It offers a comprehensive overview of the pharmacology concerning the autonomic central and peripheral nervous systems. Presenting up to date information on chemical mediators and their significance, it highlights the therapeutic aspects of several diseases affecting the cardiovascular, renal, respiratory, gastrointestinal, endocrinal and hematopoietic systems. The book also includes drug therapy for microbial and neoplastic diseases. It also comprises sections on immunopharmacology, dermatological and ocular pharmacology, providing valuable insights into these emerging and recent topics. Covering the diverse groups of drugs acting on different systems, the book reviews their actions, clinical uses, adverse effects, interactions and subcellular mechanisms of action. It is divided into 11 parts, subdivided into several chapters that evaluate the basic pharmacological principles that govern the different types of body systems. This book is intended for academicians, researchers and clinicians in industry and academic institutions in pharmaceutical, pharmacological sciences, pharmacy, medical sciences, physiology, neurosciences, biochemistry, molecular biology and other allied health sciences.

Coronavirus Disease (COVID-19): Pathophysiology, Epidemiology, Clinical Management and Public Health Response, 2023-01-25 Volume I A. An outbreak of a respiratory disease first reported in Wuhan, China, in December 2019, and the causative agent was discovered in January 2020 to be a novel betacoronavirus of the same subgenus as SARS-CoV and named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). Coronavirus disease 2019 (COVID-19) has rapidly disseminated worldwide with clinical manifestations ranging from mild respiratory symptoms to severe pneumonia and a fatality rate estimated around 2%. Person-to-person transmission is occurring both in the community and healthcare settings. The World Health Organization (WHO) has recently declared the COVID-19 epidemic a public health emergency of international concern. The ongoing outbreak presents many clinical and public health management challenges due to limited understanding of viral pathogenesis, risk factors for infection, natural history of disease, including clinical presentation and outcomes, prognostic factors for severe illness, period of infectivity, modes and extent of virus inter-human transmission as well as effective preventive measures and public health response and containment interventions. There are no antiviral treatment nor vaccine available but fast track research and development efforts including clinical therapeutic trials are ongoing across the world. Managing this serious epidemic requires the appropriate deployment of limited human resources across all cadres of health care and public health staff including clinical, laboratory, managerial and epidemiological data analysis and risk assessment experts. It presents challenges around public communication and messaging around risk with the potential for misinformation and disinformation. Therefore, integrated operational research and intervention learning from experiences across different fields and settings should contribute towards better understanding and managing COVID-19. This Research Topic aims to highlight interdisciplinary research approaches deployed during the COVID-19 epidemic, addressing knowledge gaps and generating evidence for its improved management and control. It will incorporate critical

theoretically informed and empirically grounded original research contributions using diverse approaches experimental observational and intervention studies conceptual framing expert opinions and reviews from across the world The Research Topic proposes a multi dimensional approach to improving the management of COVID 19 with scientific contributions from all areas of virology immunology clinical microbiology epidemiology therapeutics communications as well as infection prevention and public health risk assessment and management studies
