Fuel Cells Compendium Dr. Nigel N.P Brandon, Dr. David Thompsett, 2005-11-24 Fuel cells continue to be heralded as the energy source of the future and every year an immense amount of research time and money is devoted making them more economically and technically viable Fuel Cells Compendium brings together an up to date review of the literature and commentary surrounding fuel cells research Covering all relevant disciplines from science to engineering to policy it is an exceptional resource for anyone with an invested interest in the field Provides an comprehensive selection of reviews and other industrially focused material on fuel cells research Broadly scoped to encompass many disciplines from science to engineering to applications and policy In depth coverage of the two major types of fuel cells Ceramic Solid Oxide and Polymers Proton Exchange Membranes Compendium of Hydrogen Energy Frano Barbir, Angelo Basile, T. Nejat Veziroglu, 2015-09-25 Compendium of Hydrogen Energy Hydrogen Energy Conversion Volume Three is the third part of a four volume series and focuses on the methods of converting stored hydrogen into useful energy The other three volumes focus on hydrogen production and purification hydrogen storage and transmission and hydrogen use safety and the hydrogen economy respectively Many experts believe that in time the hydrogen economy will replace the fossil fuel economy as the primary source of energy Once hydrogen has been produced and stored it can then be converted via fuel cells or internal combustion engines into useful energy This volume highlights how different fuel cells and hydrogen fueled combustion engines and turbines work The first part of the volume investigates various types of hydrogen fuel cells including solid oxide molten carbonate and proton exchange membrane The second part looks at hydrogen combustion energy and the final section explores the use of metal hydrides in hydrogen energy conversion Highlights how different fuel cells and hydrogen fueled combustion engines and turbines work Features input written by leading academics in the field of sustainable energy and experts from the world of industry Examines various types of hydrogen fuel cells including solid oxide molten carbonate and proton exchange membrane Presents part of a very comprehensive compendium which across four volumes looks at the entirety of the hydrogen energy economy **Fuel Cells, Engines and Hydrogen** Frederick J. Barclay, 2006-07-11 Fuel cell technology is the most exciting and legitimate alternative source of power currently available to us as world resources of non renewable fuel continue to be depleted No other power generating technology holds the same benefits that fuel cells offer including high reliability and efficiency negligible environmental impact and security of supply Fuel cells run on hydrogen the simplest and most plentiful gas in the universe although they can also run on carbon monoxide methane or even coal Their applications are diverse from powering automobiles buildings and portable electronics to converting methane gas from wastewater plants and landfills into electricity Fuel Cells Engines and Hydrogen is a controversial text that challenges the accepted industry parameters for measuring fuel cell performance and efficiency Based on his inter disciplinary experience in the fields of power nuclear power and desalination the author contends that the development potential of the fuel cell is

related to the quantity fuel chemical exergy which like electrical potential is a quantitative measure of work done The fuel cell community currently characterises these devices in terms of the enthalpy of combustion calorific value however the author argues a correct qualitatively different and fourfold larger characterisation is via the fuel chemical exergy in units of work and not energy He asserts that the distortion introduced by this accepted perspective needs to be corrected before relatively efficient fuel cells integrated with comparatively low performing gas turbines reach the market Fuel Cells Engines and Hydrogen features a foreword by Dr Gerry Agnew Executive VP Engineering of Rolls Royce Fuel Cells Systems Ltd It is essential reading for all engineers involved with fuel cells and or the manufacture of hydrogen from natural gas as well as academics in related disciplines such as thermodynamics physical chemistry materials physics mechanical and chemical engineering
