fruitful than the current heated discussions about killer drones or robots. Finally, the study suggests that the advent of artificial super intelligence, i.e. AI that is superior across the board to human intelligence, which many experts now put firmly within the longer term planning horizons of our DSOs, presents us with unprecedented risks but also opportunities that we have to start to explore. The report contains an overview of the role that intelligence, the computational part of the ability to achieve goals in the world, has played in defense and security throughout human history; a primer on AI, what it is, where it comes from, and where it stands today in both civilian and military contexts; a discussion of the broad option space for DSOs; it opens up 12 illustrative use cases across that option space; and a set of recommendations for especially small and medium-sized defense and security organizations.
