La técnica para identificar los factores de riesgos y sus riesgos asociados varía desde la reunión de datos organizados para observar tendencias factores repetitivos errores manifiestos de omisión o violación de las normas de trabajo carencia de protecciones o guardas apropiadas basados en investigaciones de accidentes hasta los análisis de procedimientos y procesos operativos para determinar si en ellos hay en forma inherente riesgos no observados ya sea porque no se han manifestado o porque no han producido lesión hasta el momento. Para llegar a este fin es importante la recolección de datos a través de la investigación de casos de lesiones luego es necesario el análisis e interpretación de la información con el fin de tomar decisiones técnicas y eliminar o controlar las causas que produjeron el suceso.
