Cognitive Justice in a Global World Boaventura de Sousa Santos, 2007-10-23 Cognitive Justice in a Global World Prudent Knowledges for a Decent Life is an edited collection that springs from the now dormant debates known as The Science Wars which questioned the nature of scientific theories Learning from the debates about the plurality of truths and opinions editor Boaventura de Sousa Santos has realized an opportunity for strengthening the relations between the natural and social sciences with more epistemological affinities and for opening up new transnational dialogues between scientists and other producers of knowledge This book analyses in detail some of the topics that amount to a set of problematic relations between science and ethics between objectivity and neutrality between the sociological and theoretical condition of production and the limits of scientific rigor between public faith in science and the economic powers that determine scientific priorities and between science and other kinds of knowledge existing in society Maintaining that global social injustice is by and large epistemological injustice and that there can be no global social justice without global cognitive justice Cognitive Justice in a Global World is an important collection for higher level students and researchers in the social sciences philosophy of science and intellectual history

Krieg, 2019-07-11 Apply statistics to your everyday life Statistics and Data Analysis for Social Science helps students to build a strong foundational understanding of statistics by providing clarity around when and why statistics are useful Rather than focusing on the how to of statistics author Eric J Krieg simplifies the complexity of statistical calculations by introducing only what is necessary to understanding each concept Every chapter is written around and applied to a different social problem or issues enabling students to broaden their imagination about the statistical tools that can be used to make sense of our world and maybe to make the world a better place In addition to updating all the tables and examples with new data the Second Edition has replaced the section on SPSS with three new sets of exercises at the end of each chapter Chapter Exercises for students complete during their reading and bring questions to class In Class Exercises that focus on the areas that students struggled with during their reading and Homework Exercises that can be assigned if students need extra practice with the concepts

A Social Revolution Kevan Harris, 2017-08-08 For decades political observers and pundits have characterized the Islamic Republic of Iran as an ideologically rigid state on the verge of collapse exclusively connected to a narrow social base In A Social Revolution Kevan Harris convincingly demonstrates how they are wrong Previous studies ignore the forceful consequences of three decades of social change following the 1979 revolution Today more people in the country are connected to welfare and social policy institutions than to any other form of state organization In fact much of Iran's current political turbulence is the result of the success of these social welfare programs which have created newly educated and mobilized social classes advocating for change Based on extensive fieldwork conducted in Iran Harris shows how the revolutionary regime endured through the expansion of health education and aid programs that have both embedded the state in everyday life and empowered its challengers This focus on the social policies of the Islamic Republic of Iran opens a new line of inquiry into the study of welfare states in countries where they are often overlooked or ignored

The forgotten transition John Gilbert, 2018 According to Darwin's theory of evolution by natural selection man is one species among many This provokes in a self evident way comparison of anatomical and physiological characteristics Less common is the idea that the same approach can be put forward with regard to cognition On a particular moment in evolution the cognitive abilities of the branch which would eventually result in the human species must have been of the same type as these from other species evolving into different kinds of non human primates The intriguing question then is what could have caused the development into the type of cognition characterizing man According to the author the different approach between apes and man in producing stone tools unveils a clue indicating an important difference in perceptive cognitive organisation and this in relation to the same input This different organisational perspective goes with particular characteristics opening a way of negotiating the world which in the end would prove to be highly promising In this volume the potential of that particular perspective is being explored The ideas proposed will then be confronted with relevant

points of view brought forward by other authors **The Robot's Rebellion** Keith E.
