Full Moons:

The Full Moon Yearbook Julie Peters, 2023-11-28 When the full moon rises in the night sky it's hard not to be captivated by the light that streams down on earth from our closest celestial neighbour. Even in the modern age, drenched in artificial light, the full moon has a magic that speaks to our most primal selves. This magic was recognised throughout human history and lives on in the names various cultures have given each full moon as it rises above us. The Full Moon Yearbook combines Native American culture, Medieval Celtic Culture, East Asian culture, and Witchcraft to dive into the stories that have led to names like February's Budding Moon or November's Frost Moon. Over thirteen chapters, the names and mythology associated with each full moon are explored, as well as corresponding crystals, rituals, and yoga practices to make engaging with the energy of the full moon natural and fun. That thirteenth chapter is dedicated to the Blue Moon, and in The Full Moon Yearbook, readers will discover the reason why this mysterious moon appears in our night skies along with its even more elusive friend, the Black Moon. Alongside the folk names, The Full Moon Yearbook highlights some of the goddesses that have been dedicated to or personified the moon in ancient religions, bringing their stories to life. With the international perspective, lunar festivals and customs from around the world, and practical makes and recipes to help celebrate the full moon, are included in this illustrated guide showing how important the full moon has been throughout history to humankind. The Full Moon Yearbook is perfect for anyone who has ever felt a pull towards living in harmony with the moon and longs to be living a lunar-inspired life.

All You Want To Know About The Moon (Q & A) Dr. Ramesh Shishu, 2023-06-24 Explore lunar mysteries with All You Want To Know About The Moon Q & A where questions and answers illuminate the fascinating world of Earth's celestial companion. The origin of the Moon is still a mystery. Some scientists believe that the Moon was formed before the Earth. The Earth emerged about 1 000 years after the Moon. The Moon is shrinking. It has shrunk by around 200 meters across its diameter in the last billion years. The Moon is slowly moving away from the Earth at a rate of 3.8 cm (1.5 inches) per year. Scientists believe that the Moon was about 24 000 Km (15 000 miles) from Earth now it is 384 400 km (238 855 miles). The Moon's days and nights are longer than the Earth's. One Moon Day is about 14 Earth days, same for the Moon Nights. The Moon is home to some massive mountains. The highest mountain is about 5 500 meters (18 045 feet) high, more than half the height of Mount Everest. The Moon is an excellent source of building materials, water, fuel, oxygen, and other useful resources that are significant for modern electronics and batteries. The Moon has over 1 million tons of Helium-3, a non-polluting nuclear fuel. At the current rate of energy consumption, this will take care of 10 000 years of worldwide demand.
