Lewis, 2016-06-10 The First World War was above all a war of logistics Whilst the conflict will forever be remembered for the mud and slaughter of the Western Front it was a war won on the factory floor as much as the battlefield Examining the war from an industrial perspective Arming the Western Front examines how the British between 1900 and 1920 set about mobilising economic and human resources to meet the challenge of industrial war Beginning with an assessment of the run up to war the book examines Edwardian business state relations in terms of armament supply It then

outlines events during the first year of the war taking a critical view of competing constructs of the war and considering how these influenced decision makers in both the private and public domains This sets the framework for an examination of the response of business firms to the demand for shells more shells and their varying ability to innovate and manage changing methods of production and organisation The outcome a central theme of the book was a complex and evolving trade off between the quantity and quality of munitions supply an issue that became particularly acute during the Battle of the Somme in 1916 This deepened the economic and political tensions between the military the Ministry of Munitions and private engineering contractors as the pressure to increase output accelerated markedly in the search for victory on the western front The Great War created a dual army one in the field the other at home producing munitions and the final section of the book examines the tensions between the two as the country strove for final victory and faced the challenges of the transition to the peace time economy
