Fully Abstract Models Of Programming Languages:

Fully Abstract Models of Programming Languages Allen Stoughton, 1988-01-01 Fully Abstract Models of Programming Languages Allen Stoughton, Alley Stoughton, 1988-04-26 This monograph presents a language independent theory of fully abstract denotational semantics of programming languages models that identify program fragments exactly when they are operationally interchangeable This theory is used to show the existence or nonexistence of such models for several example programming languages Mathematically self contained assuming only naive set theory and some very basic notions of category theory **Programming Languages and Systems - ESOP '94** Donald Sannella, 1994-03-23 This volume contains the papers selected for presentation at the fifth European Symposium on Programming ESOP 94 which was held jointly with the 19th Colloquium on Trees in Algebra and Programming CAAP 94 in Edinburgh in April 1994 ESOP is devoted to fundamental issues in the specification design and implementation of programming languages and systems The scope of the symposium includes work on software analysis specification transformation development and verification certification programming paradigms functional logic object oriented concurrent etc and their combinations programming language concepts implementation techniques and semantics software design methodologies typing disciplines and typechecking algorithms and programming support tools **Games and Full Abstraction for a Functional Metalanguage with Recursive Types** Guy McCusker, 2012-12-06 This book is a minor revision of the thesis submitted in August 1996 no major changes have been made However I would like to take this opportunity to mention that since the thesis was written discoveries have been made which would allow a substantial simplification and strengthening of the results in Chapters 3 and 6 In particular it is now possible to model sums correctly in the category \mathbf{I} as well as in which means that the definability results of Chapter 6 can be stated and proved at the intensional level making them simpler and much closer in spirit to the original proofs of Abramsky Jagadeesan Malacaria Hyland Ong and Nickau 10 61 79 This also leads quite straightforwardly to an understanding of call by value languages Details of these improvements can be found in 14 73 It is also worth mentioning that progress has been made on some of the topics suggested for future research in Chapter 7 In particular fully abstract models have been found for various kinds of languages with local variables 8 13 16 and a fully complete games model of the polymorphic language System F has been constructed by Hughes 59 Guy McCusker February 1998 Acknowledgements First of all I must thank my supervisor Samson Abramsky It was he who first introduced me to game semantics and suggested avenues of research in the area this book would certainly not exist were it not for him
