**Functional Human Anatomy** Alexander Lane, 1981-01-01      New Atlas of Human Anatomy Thomas McCracken, 2000

There's never been anything like this before the very first anatomically exact and complete three dimensional computer generated reconstruction of actual human anatomy. These amazing color images come to life thanks to the National Library of Medicine's Visible Human Project™. For every structure the database generates an incredibly detailed wire frame image which then underwent contour mapping for a more realistic picture. First the systemic anatomy appears: the skeletal muscular nervous endocrine circulatory respiratory digestive urinary and reproductive systems. Then the focus is on the regional anatomy including the head and neck with brain eye and ear thorax with lungs and heart abdomen stomach liver gallbladder spleen intestines kidney pelvis upper limb arm elbow forearm hand and lower limb thigh knee legs and foot. It's the most fascinating mirror on our own construction ever produced and will enthrall students doctors scientists and anyone interested in the miracle that is the human body.
