

plane does not pass through the midline but instead divides the body or an organ into unequal right and left sides, it is called a **parasagittal plane** (para- = near). A **frontal** or **coronal plane** (kō-RŌ-nal; corona = crown) divides the body or an organ into anterior (front) and posterior (back) portions. A **transverse plane** divides the body or an organ into superior (upper) and inferior (lower) portions. Other names for a transverse plane are a **cross-sectional** or **horizontal plane**. Sagittal, frontal, and transverse planes are all at right angles to one another. An **oblique plane** (ō-BLĪK), by contrast, passes through the body or an organ at an oblique angle (any angle other than a 90-degree angle).

Q Which plane divides the heart into anterior and posterior portions?

When you study a body region, you often view it in section. A **section** is a cut of the body or one of its organs made along one of the planes just described. It is important to know the plane of the section so you can understand the anatomical relationship of one part to another. **Figure 1.9a–c** indicates how three different sections—midsagittal, frontal, and transverse—provide different views of the brain.

FIGURE 1.9 Planes and sections through different parts of the brain. The diagrams (left) show the planes, and the photographs (right) show the resulting sections. Note: The “view” arrows in the diagrams indicate the direction from which each section is viewed. This aid is used throughout the book to indicate viewing perspectives.
