Harmonic Wave Systems: Partial Differential Equations of the Helmholtz Decomposition Victor A. Miroshnikov, 2017-12-15 Harmonic Wave Systems is the first textbook about the computational method of Decomposition in Invariant Structures DIS that generalizes the analytical methods of separation of variables undetermined coefficients asymptotic expansions and series expansions In recent years there has been a boom in publications on propagation of nonlinear waves described by a fascinating list of partial differential equations PDEs The vast majority of wave problems are reducible to one dimensional ones in propagation variables However a list of publications with two and three dimensional applications of the DIS method is brief The book offers a comprehensive and rigorous treatment of the DIS method in two and three dimensions using the PDE approach to the Helmholtz decomposition that provides the most general background for mathematical modelling of harmonic waves in fluid dynamics electrodynamics heat transfer and other numerous areas of science and engineering which are dealing with propagation and interaction of N internal waves

Powers, Parts and Wholes Christopher J. Austin, Anna Marmodoro, Andrea Roselli, 2023-08-25 This volume offers a fresh exploration of the parts whole relations within a power and among powers While the metaphysics of powers has been extensively examined in the literature powers have yet to be studied from the perspective of their mereology Powers are often assumed to be atomic and yet what they can do and what can happen to them is complex But if powers are simple how can they have complex manifestations Can powers have parts According to which rules of composition do powers compose into powers Given the centrality of powers in current scientific

as well as philosophical thought recognizing and understanding the ontological differences between atomic and mereologically complex powers is important for both philosophy and science The first part of this book explores how powers divide the second part how powers compose The final part showcases some specific study cases in the domains of quantum mechanics and psychology Powers Parts and Wholes will be of interest to professional philosophers and graduate students working in metaphysics philosophy of science and logic Second Supplemental Appropriation Bill for 1951 United States. Congress. House. Committee on Appropriations,1950 **Is Science Neurotic?** Nicholas Maxwell,2004 Has dramatic implications for social science and the humanities for philosophy and for education Written in an informal accessible form with the exception of the appendix which is more technical **Sentience, Pain, and Anesthesia in Advanced Invertebrates** William Winlow,Anna Di Cosmo,2019-11-04 There is an emerging view supported by animal welfare legislation in a number of countries that some advanced invertebrates are self aware sentient beings with the ability to feel pain Sentience must encompass elements of time and neural complexity including memory and learning which leads us to ask At what convergent point in the evolution of nervous systems does the subjective sensation of pain arise Here we start to grapple with this issue particularly with regard to arthropods and cephalopod molluscs and to consider the most appropriate ways of anesthetizing them to minimize pain wherever possible We also report on the development of cell culture techniques to understand the actions of the anesthetics being used A better understanding of sentient creatures other than ourselves may eventually assist future development of artificial intelligence particularly if we are able to perceive whatever common neural features underlie sentience in those animals that possess it Bulletin United States. Office of Education,1939 **Accredited Higher Institutions** United States. Office of Education,1939 A Theory of Punishable Participation in Universal Crimes Terje Einarsen,Joseph Rikhof,2018-12-07 This study is the second in the four part series entitled Rethinking the Essentials of International Criminal Law and Transitional Justice While the first volume The Concept of Universal Crimes in International Law explored the parameters and theories related to crimes under international law this book examines the notion of punishable participation in such crimes It presents a general theory of personal criminal liability and provides a comprehensive overview of all forms of criminal participation in international law The authors examine numerous primary materials in international and transnational criminal law both historical and current relating to both international and domestic jurisprudence They also review academic literature that attempts to explain and bring consistency to the jurisprudence as well as other sources such as reports of the International Law Commission This rich empirical tapestry is then used to test and further develop an overarching conceptual theory and matrix that provides a better understanding of the boundaries of personal criminal liability lex lata and lex ferenda and of the relationship between the various forms of punishable participation in universal crimes Like the first volume this book makes a valuable contribution to a more coherent and practical understanding of international criminal law **Evidence in International Litigation** Chittharanjan F.

Amerasinghe,2005-06-01 This book presents a well defined analysis of the basic principles of evidence deriving them from the general rule of procedure requiring a fair trial which is a fundamental human right The basic principles relating to the burden of proof cooperation in the production of evidence as well as the standard of proof among others are examined by reference to worldwide international jurisprudence and policies Specific practice in special situations of certain tribunals such as the ICJ and the ICTY as well as other issues such as the flexibility shown in dealing with differences in tribunal practice in relation to the applicable principles are discussed in considerable detail in the second section This work will be of interest to practitioners involved in the current practice of these courts and tribunals as well as academics studying comparative and international law

Compendium on Light Speed Travel James Essig,2017-05-26 Some theoreticians contemplate and formulate the physics of tachyons which are hypothetical particles that would always travel faster than light but which could never slow down to the speed of light just as they anticipate sublight speed massive particles never being able to achieve light speed So my theoretical work on the physics and kinematics of light speed massive systems sets me apart from general trends in the

theoretical field of relativistic astronautics This book is a continuation of how and why we may be able to at some future time travel at the speed of light
