Edgeless Cities Robert Lang, 2003 Edgeless cities are a form of sprawling development that account for the bulk of office space found outside of downtowns Every major metropolitan area has them vast swaths of isolated buildings that are not pedestrian friendly not easily accessible by public transit nor designed for mixed use While critics of urban sprawl tend to focus on the social impact of edge cities developments that combine large scale office parks with major retail and housing edgeless cities are difficult to define or even locate While they stay under the radar of critics they represent a significant departure in the way American cities are built and are very likely the harbingers of a suburban future almost no one has anticipated *Edgeless Cities* explores America's new metropolitan form by examining the growth and spatial structure of suburban office space across the nation Inspired by Myron Orfield's groundbreaking *Metropolitics* Brookings 1997 Robert Lang uses data illustrations maps and photos to delineate between two types of suburban office development bounded and edgeless The book covers the evolving geography of office space in thirteen of the country's largest markets Atlanta Boston Chicago Dallas Denver Detroit Houston Los Angeles Miami New York Philadelphia San Francisco and Washington Lang demonstrates how edgeless cities differ from traditional office areas provides an overview of national regional and metropolitan office markets covers ways to map and measure them and discusses the challenges urban policymakers and practitioners will face as this new suburban form continues to spread Until now edgeless cities have been the unstudied phenomena of the new metropolis Lang's conceptual approach reframes the current thinking on suburban sprawl and provides a valuable resource for any future policy discussions surrounding smart growth issues *International*

Boomburbs Robert E. Lang, Jennifer B. LeFurgy, 2007-10-01 A glance at a list of America's fastest growing cities reveals quite a surprise most are really overgrown suburbs Places such as Anaheim California Coral Springs Florida Naperville Illinois North Las Vegas Nevada and Plano Texas have swelled to big city size with few people really noticing including many of their ten million residents These boomburbs are large rapidly growing incorporated communities of more than 100 000 residents that are not the biggest city in their region Here Robert E Lang and Jennifer B LeFurgy explain who lives in them what they look like how they are governed and why their rise calls into question the definition of urban Located

in over twenty five major metro areas throughout the United States numerous boomburbs have doubled tripled even quadrupled in size between census reports Some are now more populated than traditional big cities The population of the biggest boomburb Mesa Arizona recently surpassed that of Minneapolis and Miami Typically large and sprawling boomburbs are accidental cities but not because they lack planning Many are made up of master planned communities that have grown into one another Few anticipated becoming big cities and unintentionally arrived at their status Although boomburbs possess elements found in cities such as housing retailing offices and entertainment they lack large downtowns But they can contain high profile industries and entertainment venues the Los Angeles Angels of Anaheim and Arizona Cardinals are among over a dozen major league sports teams who play in the boomburbs Urban in fact but not in feel these drive by cities of highways office parks and shopping malls are much more horizontally built and less pedestrian friendly than most older suburbs And contrary to common perceptions of suburbia they are not rich and elitist Poverty is often seen in boomburb communities of small single family homes neighborhoods that once represented the American dream Boomburbs are a quintessential American landscape embodying much of the nation s complexity expansiveness and ambiguity This fascinating look at the often contradictory world of boomburbs examines why America s suburbs are thriving and how they are shaping the lives of millions of residents

automobile oriented an embodiment of America's postwar mass production mass consumption economy But alternate models for suburbia including transit oriented development smart growth and New Urbanism have inspired critiques of suburbanization and experiments in post suburban ways of living In *Sequel to Suburbia* Nicholas Phelps considers the possible post suburban future offering historical and theoretical context as well as case studies of transforming communities Phelps first locates these outer suburban rings within wider metropolitan spaces describes the suburbs as a spatial fix for the postwar capitalist economy and examines the political and governmental obstacles to reworking suburban space He then presents three glimpses of post suburban America looking at Kendall Dadeland in Miami Dade County Florida Tysons Corner in Fairfax County Virginia and Schaumburg Illinois near Chicago He shows Kendall Dadeland to be an isolated New Urbanism success describes the re planning of Tysons Corner to include a retrofitted central downtown area and examines Schaumburg's position as a regional capital for Chicago's northwest suburbs As these cases show the reworking of suburban space and the accompanying political process will not be left to a small group of architects planners and politicians Post suburban politics will have to command the approval of the residents of suburbia

Second Rank Cities in Europe Roberto Camagni, Roberta Capello, 2017-10-02 Second rank cities are back on the academic scene capturing the interest of scholars with their unexpected recent performance with respect to first rank cities Looking at the data on average urban GDP growth in 139 European cities since 1996 the relatively strong position of large cities over 1.5 million inhabitants on national growth coincides with the periods of fastest expansion while at times of slowdown second rank cities prevail Especially in the recent period of economic downturn second rank cities have recorded annual GDP growth rates much less negative than those of capital cities and in some European countries like Austria and Germany all cities have outperformed their capitals In explaining this phenomenon linking urban dynamics to agglomeration theories seems the most interesting approach However merely to link agglomeration economies to urban size in order to interpret urban performance is neither convincing nor sufficient and it calls for additional investigation into how agglomeration economies work This volume claims that interpretation of the current dynamics in European urban systems especially in the western part of Europe would benefit from exploitation of the traditional concept of agglomeration economies However necessary for this purpose are more in depth considerations on the nature scope intensity and causes of

agglomeration economies which do not relate their existence solely to urban size And this is where the main challenge for scholars lies in the interpretation of the missing link between agglomeration economies and urban dynamics This book was originally published as a special issue of European Planning Studies
