Educating The Engineer For The 21st Century:

Educating the Engineer for the 21st Century D. Weichert, B. Rauhut, R. Schmidt, 2006-02-17 Upspeeding technological evolution and globalisation characterise today's and future lives of engineers. It is vital for all institutions involved in engineering education to keep pace and to anticipate future needs. The herein presented collection of papers results from the Workshop on Global Engineering Education GEE 3 which took place at Aachen University of Technology 18-20 October 2000. In this meeting more than 150 specialists from 25 countries discussed the topic Educating the Engineer for the Century. Which role to attribute to non technical qualifications. How to integrate ethical aspects in education. Do we have to define international standards in education. What about quality control. What is the potential of new media for knowledge transfer. How to organise lifelong learning for engineers. These are some of the questions discussed among representatives of industries, educational institutions, politicians and individuals during this meeting. According to the sessions of the workshop the book is subdivided into chapters covering the areas: Role of the Global Engineer in Meeting the Challenges of Society in the Century, Internationality and Interdisciplinarity, Engineering Education in Emerging Economies, European Bachelor and Master Programmes, Developing Personal Skills to be a Global Engineer. Three chapters deal with successful practice in engineering education covering the topics: Programmes, Curricula and Evaluation, Educational Concepts and University Industry Partnership, Design Projects.

Educating Engineers National Academy of Engineering, 2013-02-25 The National Academy of Engineering's 2012 forum Educating Engineers: Preparing 21st Century Leaders in the Context of New Modes of Learning opened with presentations by six speakers who looked at the future of engineering and engineering education from their perspectives as educators, administrators, entrepreneurs and innovators. Each speaker focused on just one facet of a tremendously complex picture. Yet together they outlined a new vision for engineering education based on flexible, interactive, lifelong learning and the merge of activities long held to be distinct. This summary of a forum recaps the six speakers' presentations.

The 21st-Century Engineer Patricia D. Galloway, 2007 Galloway lays out nontechnical areas in which engineers must become proficient and issues a clarion call to reform the way today's engineers prepare for tomorrow.

education is currently on the verge of a major transformation. However, while the need has been much discussed and several proposals for change have been put forward, relatively little focus has been put on actual implementation of the proposed changes. This book examines a program that has a long history of experimentation in engineering education. Written by experts on the subject, it describes specific topics with each chapter focusing on a specific innovation that has been carried out and explaining the educational pedagogy, the learning benefit, as well as the transferability of the approach.

A 21st Century Cyber-Physical Systems Education National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on 21st Century Cyber-Physical Systems Education, 2017-01-27

Cyber physical systems (CPS) are engineered systems that are built from and depend upon the seamless integration of computational algorithms and physical components. CPS can be small and closed, such as an artificial pancreas, or very large, complex, and interconnected, such as a regional energy grid. CPS engineering focuses on managing interdependencies and the impact of physical aspects on cyber aspects and vice versa. With the development of low-cost sensing, powerful embedded system hardware, and widely deployed communication networks, the reliance on CPS for system functionality has dramatically increased. These technical developments, in combination with the creation of a workforce skilled in engineering CPS, will allow the deployment of increasingly capable, adaptable, and trustworthy systems. Engineers responsible for developing CPS but lacking the appropriate education or training may not fully understand, at an appropriate depth, on the one hand, the technical issues associated with the CPS software and hardware, or on the other hand, techniques for physical system modeling, energy and power actuation, signal processing, and control. In addition, these engineers may be designing and implementing life-critical systems without appropriate formal training in CPS methods needed for verification and to assure safety, reliability, and security. A workforce with the appropriate education, training, and skills will be better positioned to create and manage the next generation of CPS solutions.

A 21st Century Cyber Physical Systems Education examines the intellectual content of the emerging field of CPS and its implications for engineering and computer science education. This report is intended to inform those who might support efforts to develop curricula and materials, faculty, and university administrators, industries with needs for CPS workers, and current and potential students about intellectual foundations, workforce requirements, employment opportunities, and curricular needs.

Engineering Education through Social Innovation Douglas Gorham, Nnamdi Nwulu, 2020-01-20

This book explores the nexus between professional technical societies and engineering education by examining several societies' efforts to promote and support engineering and engineering education in the areas of pre-university education, university education, and informal education through programs and activities designed to leverage social innovation. Professional societies are in a unique position to support and contribute to engineering education and have dedicated substantial resources to social responsibility programs and activities that promote engineers and engineering. The book is chiefly intended for engineers.
