Neuroteach Glenn Whitman, Ian Kelleher, 2016-06-20 Teachers are brain changers Thus it would seem obvious that an understanding of the brain the organ of learning would be critical to a teacher's readiness to work with students Unfortunately in traditional public public charter private parochial and home schools across the country most teachers lack an understanding of how the brain receives filters consolidates and applies learning for both the short and long term Neuroteach was therefore written to help solve the problem teachers and school leaders have in knowing how to bring the growing body of educational neuroscience research into the design of their schools classrooms and work with each individual student It is our hope that Neuroteach will help ensure that one day every student regardless of zip code or school type will learn and develop with the guidance of a teacher who knows the research behind how his or her brain works and learns

He explains why youth is such a sensitive period during which brain plasticity is maximal but assures us that our abilities continue into adulthood and that we can enhance our learning and memory at any age We can all learn to learn by taking maximal advantage of the four pillars of the brain's learning algorithm: attention, active engagement, error feedback, and consolidation The exciting advancements in artificial intelligence of the last twenty years reveal just as much about our remarkable abilities as they do about the potential of machines How We Learn finds the boundary of computer science, neurobiology, and cognitive psychology to explain how learning really works and how to make the best use of the brain's learning algorithms in our schools and universities as well as in everyday life

Zull,2023-07-03 Finalist for Foreword Magazine s 2011 Book of the Year With his knack for making science intelligible for the layman and his ability to illuminate scientific concepts through analogy and reference to personal experience James Zull offers the reader an engrossing and coherent introduction to what neuroscience can tell us about cognitive development through experience and its implications for education Stating that educational change is underway and that the time is ripe to recognize that the primary objective of education is to understand human learning and that all other objectives depend on achieving this understanding James Zull challenges the reader to focus on this purpose first for her or himself and then for those for whose learning they are responsible The book is addressed to all learners and educators to the reader as self educator embarked on the journey of lifelong learning to the reader as parent and to readers who are educators in schools or university settings as well as mentors and trainers in the workplace In this work James Zull presents cognitive development as a journey taken by the brain from an organ of organized cells blood vessels and chemicals at birth through its shaping by experience and environment into potentially to the most powerful and exquisite force in the universe the human mind Zull begins his journey with sensory motor learning and how that leads to discovery and discovery to emotion He then describes how deeper learning develops how symbolic systems such as language and numbers emerge as tools for thought how memory builds a knowledge base and how memory is then used to create ideas and solve problems Along the way he prompts us to think of new ways to shape educational experiences from early in life through adulthood informed by the insight that metacognition lies at the root of all learning At a time when we can expect to change jobs and

careers frequently during our lifetime when technology is changing society at break neck speed and we have instant access to almost infinite information and opinion he argues that self knowledge awareness of how and why we think as we do and the ability to adapt and learn are critical to our survival as individuals and that the transformation of education in the light of all this and what neuroscience can tell us is a key element in future development of healthy and productive societies
