Exile in Greece Abdel-moniem El-Shorbagy, 2019-02-05 In 1957

the Egyptian architect Hassan Fathy left Egypt for five years going to Greece when Constantinos A Doxiadis asked him to join his organisation in Athens Although Fathy was recognised as a proponent of nationalistic attitudes he left Egypt at the time when it had just achieved its independence and when the British occupation had ended Fathy justified his move to Greece as an opportunity to achieve more professional freedom elsewhere Frustrated in his efforts to build in Egypt he believed that it was more influential to build than to teach and that a building anywhere in the world would speak louder than lectures and that if some completed project attracted international attention it would eventually have an effect on Egypt      **Geographies**

**(Festschrift in honor of Gunilla Bradley)** Haftor, Darek, Mirijamdotter, Anita, 2010-07-31 Information and Communication Technologies Society and Human Beings Theory and Framework addresses the extensive area of effects of ICT on human beings and the interaction between ICT individuals organizations and society This premier reference source features contributions from over 45 distinguished researchers from around the world each presenting high quality research on Social Informatics Human Computer Interaction Organizational Behavior and Macro ergonomics This unique publication is perfect for students teachers researchers engineers practitioners managers policy makers and media alike **Seoul** Rafael Luna, 2024-04-30 This book focuses on understanding how a megacity like Seoul can be read as a formal architectural composition and not an endless urban sprawl In a broader sense the book discusses the dichotomy between city and urbanization city being an architectural problem of bounded forms while urbanism is an infrastructural project of expansion It is an uncontested reality that urbanization is a continuous global process that has produced nebulous conurbations labeled as megacities These expand beyond the virtual administrative boundary of any said city producing a discrepancy between an area of administrative control and the real physical condition of human settlement If there were a better formal understanding of megacities through their typological architectural conditions then there could be a better assessment of the qualitative state of urbanization Avant garde groups from the 1950s 1960s and 1970s such as Team X the Situationist the Structuralist and the Metabolist worked with ideas of megaforms and megastructures to address this issue Although most of these proposals remained as paper architecture this book reevaluates some of these ideas for the 21st century megacity using Seoul as a case study due to its clear typological formations produced over its different periods of governance The aim is to present the concept for an infra architectural hybrid model of typological islands and subterranean megastructure that organizes Seoul as a flexible multi linear city This book will be of interest to academics and students of architecture urban geography and Asian studies Managing Urban Futures Marco Keiner, 2016-12-05 Urbanization is one of the most powerful forces influencing global sustainability It is dominated by three factors population growth rural urban migration and subsequent urban expansion Perhaps nowhere are these factors more dominant than in developing countries This volume brings together leading experts including Alan Gilbert John Friedmann Saskia Sassen and Janice Perlman to explore the conflicting challenges of rapid urbanization in developing countries While all have to contend with key issues such as social segregation poverty and loss of governability the ongoing forces of urban growth vary from country to country By comparing the challenges of urbanization in Africa Latin America Asia and the Pacific this book puts forward a new way of thinking about mega and million cities in developing countries one that promotes their vital function in society as engines of ideas technologies societal change democratic transformation and loci of political will to build a new regime of global sustainability Architecture and the Right to Heal Esra Akcan, 2025-10-03 Esra Akcan explores architecture s role in the healing

processes that take place following socioeconomic political and environmental disasters      National Energy Planning and Management in Developing Countries H. Neu, D. Bain, 1983-04-30 Lectures delivered at the Management Training Seminar held at the Joint Research Centre Ispra Italy May 3 14 1982      *New Urban Spaces* Neil Brenner, 2019-05-24 The urban condition is today being radically transformed Urban restructuring is accelerating new urban spaces are being consolidated and new forms of urbanization are crystallizing In *New Urban Spaces* Neil Brenner argues that understanding these mutations of urban life requires not only concrete research but new theories of urbanization To this end Brenner proposes an approach that breaks with inherited conceptions of the urban as a bounded settlement unit the city or the metropolis and explores the multiscalar constitution and periodic rescaling of the capitalist urban fabric Drawing on critical geopolitical economy and spatialized approaches to state theory Brenner offers a paradigmatic account of how rescaling processes are transforming inherited formations of urban space and their variegated consequences for emergent patterns and pathways of urbanization The book also advances an understanding of critical urban theory as radically revisable key urban concepts must be continually reinvented in relation to the relentlessly mutating worlds of urbanization they aspire to illuminate

*Cities and Their Vital Systems* Advisory Committee on Technology and Society, 1988-02-01 *Cities and Their Vital Systems* asks basic questions about the longevity utility and nature of urban infrastructures analyzes how they grow interact and change and asks how when and at what cost they should be replaced Among the topics discussed are problems arising from increasing air travel and airport congestion the adequacy of water supplies and waste treatment the impact of new technologies on construction urban real estate values and the field of telematics the combination of computers and telecommunications that makes money machines and national newspapers possible      **Absent Environments** Andreas Philippopoulos-Mihalopoulos, 2007-06-27 Offering a novel transdisciplinary approach to environmental law its principles mechanics and context as tested in its application to the urban environment this book traces the conceptual and material absence of communication between the human and the natural and controversially includes such an absence within a system of law and a system of geography which effectively remain closed to environmental considerations The book looks at Niklas Luhmann's theory of autopoiesis Introducing the key concepts and operations contextualizing them and opening them up to critical analysis Indeed in contrast to most discussions on autopoiesis it proposes a radically different reading of the theory in line with critical legal political sociological urban and ecological theories while drawing from writings by Husserl and Derrida as well as Latour Blanchot Haraway Agamben and Nancy It explores a range of topics in the areas of environmental law and urban geography including environmental risk environmental rights the precautionary principle intergenerational equity and urban waste discourses on community nature science and identity The author redefines the traditional foundations of environmental law and urban geography and suggests a radical way of dealing with scientific ignorance cultural differences and environmental degradation within the perceived need for legal delivery of certainty      **Cities of the Global South**

**Reader** Faranak Miraftab, Neema Kudva, 2014-10-10 The Cities of the Global South Reader adopts a fresh and critical approach to the field of urbanization in the developing world The Reader incorporates both early and emerging debates about the diverse trajectories of urbanization processes in the context of the restructured global alignments in the last three decades Emphasizing the historical legacies of colonialism the Reader recognizes the entanglement of conditions and concepts often understood in binary relations first third worlds wealth poverty development underdevelopment and inclusion exclusion By asking whose city whose development the Reader rigorously highlights the fractures along lines of class race gender and other socially and spatially constructed hierarchies in global South cities The Reader's thematic structure where editorial introductions accompany selected texts examines the issues and concerns that urban dwellers planners and policy makers face in the contemporary world These include the urban economy housing basic services infrastructure the role of non state civil society based actors planned interventions and contestations the role of diaspora capital the looming problem of adapting to climate change and the increasing spectre of violence in a post 9 11 transnational world The Cities of the Global South Reader pulls together a diverse set of readings from scholars across the world some of which have been written specially for the volume to provide an essential resource for a broad interdisciplinary readership at undergraduate and postgraduate levels in urban geography urban sociology and urban planning as well as disciplines related to international and development studies Editorial commentaries that introduce the central issues for each theme summarize the state of the field and outline an associated bibliography They will be of particular value for lecturers students and researchers making the Cities of the Global South Reader a key text for those interested in understanding contemporary urbanization processes

**Peripheral Centralities** Nicholas A. Phelps,Roger Keil,Paul Maginn,2025-04-01 The term peripheral centralities may seem something of an oxymoron and yet the spatial peripheries of cities have often been more central to urban development processes than is appreciated To better understand the nature of peripheral centrality *Peripheral Centralities The Lost and Past Urbanity of the Suburbs* brings together a wide variety of examples of lost and forgotten peripheral centralities of different sizes purpose geographical location and political complexion dating from the first decades of the twentieth century to the present day Following the introduction two chapters provide broad overviews of peripheral centralities in international and national systems of centralities The next four chapters look at plans from settings as different as Dublin and Shanghai that for one reason or another failed to materialize The following eight chapters each describes cases where projects have been realized ranging from peripheral townships in England to a Chinese steel city To conclude the book the editors highlight the themes revealed in the foregoing chapters and consider the part an appreciation of peripheral centralities might play in the development of urban theory from the outside in **Earth Polyphony** Suhasini Vincent,2024-02-19 In *Earth Polyphony*

Suhasini Vincent analyzes the theory of ecocriticism in its entirety and its existence in the global paradigm of climate change. Vincent shows how a polyphony of voices can affect law and decision making in the era of the Anthropocene and aptly shows how voices can coexist as in Bakhtinian polyphony where multiple perspectives coexist despite contradictions and differences. Vincent argues that both material and non material worlds are endowed with storied forms of knowledge that prompt ecocritical writers to engage in new experimental modes of expression. She explores the material turn, the animal turn, and the narrative turn to highlight how law meets literature, prompts eco activism, and how these crisscrossing narratives influence each other to spark judicial activism in forums around the planet.
