Education Training In Health Informati:

Informatics Education in Healthcare Eta S. Berner, 2013-09-02 This book reviews and defines the current state of the art for informatics education in medicine and health care This field has undergone considerable change as the field of informatics itself has evolved Twenty years ago almost the only individuals involved in health care who had even heard the term informatics were those who identified themselves as medical or nursing informaticians Today we have a variety of subfields of informatics including not just medical and nursing informatics but informatics applied to specific health professions such as dental or pharmacy informatics as well as biomedical informatics bioinformatics and public health informatics The book addresses the broad range of informatics education programs available today The Editor and experienced internationally recognized informatics educators who have contributed to this work have made the tacit knowledge explicit and shared some of the lessons they have learned This book therefore represents the key reference for all involved in the informatics education whether they be trainers or trainees

Education and Training in Health Informatics in Europe A. Hasman, 1995 A European wide survey on the EDUCTRA Education and Training in Health Informatics Concerted Action was commenced in 1992 under the auspices of the AIM Advanced Informatics in Medicine in Europe programme This book consists of four parts The first chapter reproduces the original EC Recommendation and outlines the concerted European efforts in education and training in health telematics made by the European Commission DG XIII Health Telematics office The second part provides the general guidelines for European curricula in health informatics as they were developed and elaborated by the members of the EDUCTRA Concerned Action 1992 1994 The third part of this volume entails the detailed descriptions and applications of curricula in health informatics in European states The fourth part consists of a glossary of terms and acronyms used in current research and practice of health informatics The work provides a comprehensive overview of the current needs in health informatics in Europe but also the necessary guidelines materials tools and applications for improving education and training within the near future Readers medicine and health care professionals administrators health professionals teachers and trainers The work provides not only a comprehensive overview of the current needs in health informatics in Europe but also the necessary guidelines materials tools and applications for improving education and training within the near future Health Informatics Europe volume 3 no 2 November 1995 p 15

Global Health Informatics Education Evelyn J.S. Hovenga, John Mantas, 2004-08-30 Throughout the world healthcare professionals often lack knowledge of the possibilities and limitations of systematically processing data information and knowledge and of the resulting impact on quality decision making They are often asked to use information technologies of which they have limited appreciation in order to enhance their practices through better use of information resources However for systematically processing data information and knowledge in medicine and in healthcare healthcare professionals who are well trained in medical informatics or health informatics are needed It will only be through improved

education of healthcare professionals and through an increase in the number of well trained workers in health and medical informatics that this lack of knowledge and associated skills can begin to be reversed Although we can recognize further progress in educating health and a considerable number of educational programs for health informatics medical informatics specialists have been set up there is still a need to enhance these educational activities world wide considering global developments as well as new curricular concepts and technological opportunities IMIA and in particular its working group on health and medical informatics education is the leading international society stimulating such educational activities in various ways This book is especially helpful for educators in the field of health medical informatics **Global Health Informatics Education**

International Handbook of Research in Medical Education Geoffrey R. Norman, Cees P.M. van der Vleuten, D.I. Newble, 2012-12-06 GEOFF NORMAN McMaster University Hamilton Canada CEES VAN DER VLEUTEN University of Maastricht Netherlands DAVID NEWBLE University of Sheffield England The International Handbook of Research in Medical Education is a review of current research findings and contemporary issues in health sciences education The orientation is toward research evidence as a basis for informing policy and practice in education Although most of the research findings have accrued from the study of medical education the

handbook will be useful to teachers and researchers in all health professions and others concerned with professional education. The handbook comprises 33 chapters organized into six sections: Research Traditions, Learning The Educational Continuum, Instructional Strategies, Assessment and Implementing the Curriculum. The research orientation of the handbook will make the book an invaluable resource to researchers and scholars and should help practitioners to identify research to place their educational decisions on a sound empirical footing.

THE FIELD OF RESEARCH IN MEDICAL EDUCATION

The discipline of medical education began in North America more than thirty years ago with the founding of the first office in medical education at Buffalo, New York, by George Miller in the early 1960s. Soon after, large offices were established in medical schools in Chicago, University of Illinois, Los Angeles, University of Southern California, and Lansing, Michigan State University. All these first generation offices mounted master's level programs in medical education and many of their graduates went on to found offices at other schools.
