Collins, Mirsad Hadžikadić, 2019-06-14 This book emerged out of international conferences organized as part of the AAAI Fall Symposia series and the Swarmfest 2017 conference It brings together researchers from diverse fields studying these complex systems using CAS and agent based modeling tools and techniques In the past the knowledge gained in each domain has largely remained exclusive to that domain By bringing together scholars who study these phenomena the book takes knowledge from one domain to provide insight into others Most interesting phenomena in natural and social systems include constant transitions and oscillations among their various phases wars companies societies markets and humans rarely stay in a stable predictable state for long Randomness power laws and human behavior ensure that the future is both unknown and challenging How do events unfold When do they take hold Why do some initial events cause an avalanche while others do not What characterizes these events What are the thresholds that differentiate a sea change from a non event Complex adaptive systems CAS have proven to be a powerful tool for exploring these and other related phenomena The authors characterize a general CAS model as having a large number of self similar agents that 1 utilize one or more levels of feedback 2 exhibit emergent properties and self organization and 3 produce non linear dynamic behavior Advances in modeling and computing technology have led not only to a deeper understanding of complex systems in many areas but they have also raised the possibility that similar fundamental principles may be at work across these systems even though the underlying principles may manifest themselves differently They Call It Love Alva Gotby, 2024-02-20 A fascinating and exhaustive explanation as to why emotions are a political issue Brit Dawson Another Magazine The work of love is a feminist problem and it demands feminist solutions Comforting a family member or friend soothing children providing company for the elderly ensuring that people feel well enough to work this is all essential labour Without it capitalism would cease to function They Call It Love investigates the work that makes a haven in a heartless world examining who performs this labor how it is organised and how it might change In this groundbreaking book Alva Gotby calls this work emotional reproduction unveiling its inherently political nature It not

only ensures people's well-being but creates sentimental attachments to social hierarchy and the status quo. Drawing on the thought of the feminist movement, Wages for Housework, Gotby demonstrates that emotion is a key element of capitalist reproduction. To improve the way we relate to one another will require a radical restructuring of society. **The Oxford**
