New Ways and Needs for Exploiting Nuclear Energy Didier Sornette, Wolfgang Kröger, Spencer Wheatley, 2018-09-29 The history of mankind is a story of ascent to unprecedented levels of comfort productivity and consumption enabled by the increased mastery of the basic reserves and flows of energy This miraculous trajectory is confronted by the consensus that anthropogenic emissions are harmful and must decrease requiring de carbonization of the energy system The mature field of indicator based sustainability assessment provides a rigorous systematic framework to balance the pros and cons of the various existing energy technologies using lifecycle assessments and weighting criteria covering the environment economy and society as the three pillars of sustainability In such a framework nuclear power is ranked favorably but since emphasis is often placed on radioactive wastes and risk aversion renewables are usually ranked top However quantifying the severity of the consequences of nuclear accidents on a rough integral cost basis and balancing severity with low core damage accident probabilities indicates that the average external cost of such accidents is similar to that of modern renewables and far less than carbon based energy This book formulates the overall goal and associated unprecedented demanding criteria of taming nuclear risks by excluding mechanisms that lead to serious accidents and avoiding extremely long stewardship times as far as possible by design It reviews the key design features of nuclear power generation paving the way for the exploration of radically new combinations of technologies to come up with revolutionary or even exotic system designs The book also provides scores for the selected designs and discusses the high potential for far reaching improvements with small modular lines of the best versions as being most attractive Given the ambition and challenges the authors call for an urgent increase in funding of at least two orders of magnitude for a broad international civilian super Apollo program on nuclear energy systems Experience

indicates that such investments in fundamental technologies enable otherwise unattainable revolutionary innovations with massive beneficial spillovers to the private sector and the public for the next generations

Safer Complex Industrial Environments Erik Hollnagel, 2009-10-20 While a quick response can save you in a time of crisis avoiding a crisis remains the best defense When dealing with complex industrial systems it has become increasingly obvious that preparedness requires a sophisticated understanding of human factors as they relate to the functional characteristics of socio technology systems Edited by indust
