Edge Detection Methods Based on Generalized Type-2 Fuzzy Logic Claudia I. Gonzalez,Patricia Melin,Juan R. Castro,Oscar Castillo,2017-03-05 In this book four new methods are proposed In the first method the generalized type 2 fuzzy logic is combined with the morphological gradient technique The second method combines the general type 2 fuzzy systems GT2 FSs and the Sobel operator in the third approach the methodology based on Sobel operator and GT2 FSs is improved to be applied on color images In the fourth approach we proposed a novel edge detection method where a digital image is converted a generalized type 2 fuzzy image In this book it is also included a comparative study of type 1 interval type 2 and generalized type 2 fuzzy systems as tools to enhance edge detection in digital images when used in conjunction with the morphological gradient and the Sobel operator The proposed generalized type 2 fuzzy edge detection methods were tested with benchmark images and synthetic images in a grayscale and color format Another contribution in this book is that the generalized type 2 fuzzy edge detector method is applied in the preprocessing phase of a face recognition system where the recognition system is based on a monolithic neural network The aim of this part of the

book is to show the advantage of using a generalized type 2 fuzzy edge detector in pattern recognition applications The main goal of using generalized type 2 fuzzy logic in edge detection applications is to provide them with the ability to handle uncertainty in processing real world images otherwise to demonstrate that a GT2 FS has a better performance than the edge detection methods based on type 1 and type 2 fuzzy logic systems
