Genetic control of self-incompatibility and reproductive development in flowering plants Elizabeth G.

Williams,A.E. Clarke,R.B. Knox,1994-08-31 Plant reproductive biology has undergone a revolution during the past five years with the cloning sequencing and localization of the genes important in reproduction These advantages in plant molecular biology have led to exciting applications in plant biotechnology including the genetic engineering of male sterility and other reproductive processes This book presents an interesting and contemporary account of these new developments from the scientists in whose laboratories they have been made The chapters focus on two areas the molecular biology of self incompatibility which is the system of self recognition controlled by the S gene and related genes and the cellular and molecular biology of pollen development and genetic dissection of male sterility Some chapters feature Arabidopsis with its unique genetic system Reproduction is vital for seed production in crop plants and this book presents new approaches to manipulate plant breeding systems for the 21st century *Genetic control of self-incompatibility and reproductive development in flowering plants* Elizabeth G. Self-Incompatibility in Flowering Plants Veronica E. Franklin-Tong,2008-07-30 Great progress has been made in our understanding of pollen pistil interactions and self incompatibility SI in flowering plants in the last few decades This book covers a broad spectrum of research into SI with accounts by internationally renowned scientists It comprises two sections Evolution and Population Genetics of SI Molecular and Cell Biology of SI Systems The reader will gain an insight into the diversity and complexity of these polymorphic cell cell recognition and rejection systems Heteromorphic and homomorphic SI systems and our current understanding of the evolution and phylogeny of these systems based on the most recent molecular sequence data are covered Further the book presents major advances in our knowledge of the pistil and pollen S determinants and other unlinked components involved in SI as well as the apparently diverse cellular regulatory mechanisms utilised to ensure inhibition of self pollen *Incompatibility and Incongruity in Wild and Cultivated Plants* Dreux de Nettancourt,2013-03-14 Advances in plant cell molecular biology have considerably increased our understanding of pollen

pistil barriers particularly those operated by incompatibility mechanisms and at the same time demonstrated the complexity and diversity of rejection systems once considered to be relatively simple This book reviews the impressive knowledge acquired in the last century on the biology particularly the inheritance and population genetics of self incompatibility and presents the new approaches to the study of the structure function and evolution of incompatibility alleles and the analysis of cell cell recognition and pollen rejection The different methods now available for transforming the breeding behaviour of higher plants are also discussed

The Changing Scenario in Plant Sciences ,2000 Current Trends in the Embryology of Angiosperms Sant Saran Bhojwani,Woong-Young Soh,2013-04-17 During the last two decades the modern techniques of histochemistry electron microscopy plant physiology biochemistry cell and molecular biology immunology and genetics have been applied to investigate the intricacies of the processes involved in embryo formation and considerable new information has been generated A better understanding of these processes has enhanced our capacity to manipulate fertilization and embryo development This has changed the face of the embryology of angiosperms from a descriptive science to an experimental and applied science The revolutionary progress made in this fascinating field of sexual reproduction was the motivation to prepare this volume It includes 21 chapters written by experts who have made substantial contributions to their respective fields It covers all aspects of the embryology of angiosperms ranging from development isolation and structure of male and female gametes their fusion in vivo and in vitro and structure physiology and genetics of zygotic embryogenesis to endosperm and seed development Advances in somatic embryogenesis synthetic seed technology and regeneration of haploid plants from male and female gametophytes are discussed Other important topics covered in this volume are sexual incompatibility parthenocarpy and apomixis The last chapter deals with the embryological perspective of inheritance of extra nuclear genes All the chapters contain up to date information and are profusely illustrated Graduate and postgraduate students teachers and scientists of botany and other areas of plant sciences will find this book extremely useful

Biology and Breeding of Crucifers Surinder Kumar Gupta,2016-04-19 Considerable interest has developed in recent years in crucifers and particularly in their wild relatives as

they contain genetic material that may be utilized for further evolution of superior crop varieties through introgression and distant hybridization Until now there has been no single volume that focuses exclusively on the biology and breeding of **Genetic Improvement of Solanaceous Crops** M K Razdan, A. K. Mattoo, 2006-01-12 Potato is the most significant non cereal crop Much attention has been paid to this commercially important crop The aim of this volume is to capture the recent advances made in improving potatoes using traditional breeding methods as well as genetic engineering technology The book provides a critical appraisal of the state of the art finding on this crop **International Review of Cytology**, 1999-09-01

International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal Articles address structure and control of gene expression nucleocytoplasmic interactions control of cell development and differentiation and cell transformation and growth Authored by some of the foremost scientists in the field each volume provides up to date information and directions for future research Unusual Autonomic Ganglia Embryonic Genome Activation in Mammal Embryos Temporal and Spatial Coordination Plastid Components Sexual Incompatibility in Plants and Fungi

Genetics Manual G. P. Redei, 1998 Redei has created an outstanding compendium of genetics Arranged as a dictionary the book is almost an encyclopedic collection of terms concepts The author has managed to define terms with appropriate mixtures of depth detail for the researcher along with clarity useful for the nonexpert Choice 1998 **Boron in Plant and Animal Nutrition** Heiner E. Goldbach, Benjavan Rerkasem, Monika A. Wimmer, Patrick H. Brown, Michel Thellier, R.W. Bell, 2012-12-06 The Boron 97 meeting was a great success in summarising all recent developments in basic and applied research on boron's function especially in plants New techniques have since been developed and new insight has been gained into the role of boron in plant and animal metabolism Nevertheless there were still lots of open questions The aim of the present workshop held in Bonn as a satellite meeting to the International Plant Nutrition Colloquium was thus to gather all actual information which has been gained since the Boron 97 meeting and to compile knowledge both from animal and plant sciences Furthermore applied aspects had to be addressed too as there is an increasing awareness of boron deficiencies even in crops such as wheat which have formerly not been considered as responsive to boron application Genetic differences in boron demand and efficiency within one species are a further important topic which has gained importance since the 1997 meeting More in depth knowledge on the mechanisms of boron efficiency are required as an increased efficiency will be one major possibility to maintain and improve crop yields for resource poor farmers Nevertheless it has also clearly been shown that an adequate supply of boron is needed to obtain high yields of crops with a high quality and that a sustainable agriculture has to provide an adequate boron supply to compensate for inevitable losses through leaching especially in the humid tropics and temperate regions and for the boron removal by the crop **UV-B Radiation and Crop Growth** Sunita Kataria, Vijay Pratap Singh, 2023-01-01 This book is an inclusive collection of topics on research on UVB for its impact on plants with a focus on its use as an emerging technology for crop growth and protection This book covers role of UV B on

biological systems and its transformation from generic stressor to specific regulator It also explores the past research in UVB studies and the changing mind sets regarding UV B in recent time with respect to the plant growth It also explores the discovery of specific UV B photoreceptor UVR8 and UVR8 mediated plants responses This book is of interest to teachers researchers agriculture scientists and plant physiologists Also the book serves as additional reading material for undergraduate and graduate students of agriculture forestry ecology soil science and environmental sciences **Transgenic Plants and Crops** George C. Khachatourians,Y. H. Hui,Ralph Scorza,Wai-Kit Nip,2002-03-26 This work details the advances in transgenic plant construction and explores the social political and legal aspects of genetic plant manipulation **Pollen Biology and Biotechnology** K R Shivanna,2019-04-24 The author offers an overview of pollen biology and biotechnology for students and researchers in areas such as reproductive biology biotechnology aeropalynology plant breeding horticulture and forestry Citing more than 1 500 references to pollen research the text covers topics including advances in understanding pollen tube growth the use **Plant Breeding Reviews, Volume 45** Irwin Goldman,2021-10-21 Plant Breeding Reviews presents state of the art reviews on plant genetics and the breeding of all types of crops by both traditional means and molecular methods Many of the crops widely grown today stem from a very narrow genetic base understanding and preserving crop genetic resources is vital to the security of food systems worldwide The emphasis of the series is on methodology a fundamental understanding of crop genetics and applications to major crops **Plant Breeding Systems** A. J. Richards,1997 This illustrated text attempts to provide a unified and comprehensive coverage of plant breeding systems a subject vital to plant geneticists plant breeders taxonomists evolutionists and conservationists **High Diversity Forest Restoration in Degraded Areas** Ricardo Ribeiro Rodrigues,2007 The discussion of ideas methods scientific results empirical practices and perspectives on the restoration of high diversity tropical and subtropical forest formations is the objective of this book however principles here proposed may be used in other less complex forest formations Special attention is given to the role of the ecological processes on the restoration of functional forest communities once the composition and structure of these natural or even restored communities change in space and time **Plant Evolution and the Origin of Crop Species** James F. Hancock,2012 The genetic variability that developed in plants during their evolution is the basic of their domestication and breeding into the crops grown today for food fuel and other industrial uses This third edition of Plant Evolution and the Origin of Crop Species brings the subject up to date with more emphasis on crop origins Beginning with a description of the processes of evolution in native and cultivated plants the book reviews the origins of crop domestication and their subsequent development over time All major crop species are discussed including cereals protein plants starch crops fruits and vegetables from their origins to conservation of their genetic resources for future development **Mutation Breeding** A. M. van Harten,1998-06-25 An essential and comprehensive summary for all plant breeders
