## Genetic Evolution:

Multi-Omics, Genetic Evolution and Crop Domestication Xuming Li, Hao Tong, Changmian Ji, 2025-08-25 Crop production is threatened by climate change depletion of fertilizer feedstock and a number of biotic and abiotic stresses Through the lens of evolution climate change is an agent of natural selection that forces crop populations to change and adapt Climate warming impacts crop productivity and small increases in average temperature are predicted to decrease crop yield significantly Therefore crop breeding to increase yield will have a significant positive impact on global food security However variety innovation and breeding have been largely limited by insufficient genetic sources As we know crops were domesticated from wild plants through long time artificial selection and breeding Genomic variations such as SNPs or InDel mutations large structural variations whole genome duplication transposon insertion gene duplication epigenetic changes and other elements may contribute to phenotype variations

**Genetics and Evolution of Aging** Michael R. Rose, Caleb E. Finch, 2013-03-09 Aging is one of those subjects that many biologists feel is largely unknown Therefore they often feel comfortable offering extremely facile generalizations that are either unsupported or directly refuted in the experimental literature Despite this unfortunate precedent aging is a very broad phenomenon that calls out for integration beyond the mere collecting together of results from disparate laboratory organisms With this in mind Part One offers several different synthetic perspectives The editors Rose and Finch provide a verbal synthesis of the field that deliberately attempts to look at aging from both sides the evolutionary and the molecular The articles by Charlesworth and Clark both provide population genetic perspectives on aging the former more mathematical the latter more experimental Bell takes a completely different approach arguing that aging may not be the result of evolutionary forces Bell's model instead proposes that aging could arise from the progressive deterioration of chronic host pathogen interactions This is the first detailed publication of this model It marks something of a return to the type of aging theories that predominated in the 1950's and 1960's theories like the somatic mutation and error catastrophe theories We hope that the reader will be interested by the contrast in views between the articles based on evolutionary theory and that of Bell MR Rose and C E Finch eds *Genetics and Evolution of Aging* 5 12 1994 1994 Kluwer Academic Publishers The Journal of uniform genetics of aging 2 Michael R Rose Caleb E

*From Genesis to Genetics* John A. Moore, 2002 A marvelous and insightful review of the creationism evolution controversy by an individual who has contributed immeasurably to the public understanding of science Lee Hood author of *The Code of Codes Scientific and Social Issues in the Human Genome Project* I know of no book that explains the evolution creation controversy in such a comprehensive manner and yet in a style that will be understood by high school students It demarcates those areas of thought that belong to faith supported religion on the one hand and reason supported science on the other without denigrating either Richard E Dickerson UCLA There are few scientists as knowledgeable and clear about how science works and as thoughtful about the creation and evolution controversy as John A Moore A product of Moore's wisdom and his over

Levinton,2001-08-06 An expanded and updated second edition comprehensively looks at macroevolution integrating evolutionary processes at all levels to explain animal diversity      **Evolutionary Genetics** Glenn-Peter Sætre,Mark Ravinet,2019 With recent technological advances vast quantities of genetic and genomic data are being generated at an ever increasing pace The explosion in access to data has transformed the field of evolutionary genetics A thorough understanding of evolutionary principles is essential for making sense of this but new skill sets are also needed to handle and analyze big data This contemporary textbook covers all the major components of modern evolutionary genetics carefully explaining fundamental processes such as mutation natural selection genetic drift and speciation It also draws on a rich literature of exciting and inspiring examples to demonstrate the diversity of evolutionary research including an emphasis on how evolution and selection has shaped our own species Practical experience is essential for developing an understanding of how to use genetic and genomic data to analyze and interpret results in meaningful ways In addition to the main text a series of online tutorials using the R language serves as an introduction to programming statistics and analysis Indeed the R environment stands out as an ideal all purpose source platform to handle and analyze such data The book and its online materials take full advantage of the authors own experience in working in a post genomic revolution world and introduces readers to the plethora of molecular and analytical methods that have only recently become available Evolutionary Genetics is an advanced but accessible textbook aimed principally at students of various levels from undergraduate to postgraduate but also for researchers looking for an updated introduction to modern evolutionary biology and genetics      **Evolutionary Genetics** Charles W. Fox,Jason B. Wolf,2006-04-27 Charles Fox and Jason Wolf have brought together leading researchers to produce a cutting edge primer introducing readers to the major concepts in modern evolutionary genetics This book spans the continuum of scale from studies of DNA sequence evolution through proteins and development to multivariate phenotypic evolution and the continuum of time from ancient events that lead to current species diversity to the rapid evolution seen over relatively short time scales in experimental evolution studies Chapters are accessible to an audience lacking extensive

background in evolutionary genetics but also current and in depth enough to be of value to established researchers in evolution biology

**Human Evolution beyond Biology and Culture** Jeroen C. J. M. van den Bergh, 2018-10-18 Both natural and cultural selection played an important role in shaping human evolution Since cultural change can itself be regarded as evolutionary a process of gene culture coevolution is operative The study of human evolution in past present and future is therefore not restricted to biology An inclusive comprehension of human evolution relies on integrating insights about cultural economic and technological evolution with relevant elements of evolutionary biology In addition proximate causes and effects of cultures need to be added to the picture issues which are at the forefront of social sciences like anthropology economics geography and innovation studies This book highlights discussions on the many topics to which such generalised evolutionary thought has been applied the arts the brain climate change cooking criminality environmental problems futurism gender issues group processes humour industrial dynamics institutions languages medicine music psychology public policy religion sex sociality and sports

**Genetics, Evolution, and Conservation of Neotropical Fishes** Rodrigo A. Torres, Roberto Ferreira Artoni, 2020-01-21 Fish represent the most ancestral and specious group of vertebrates and occupy more diverse aquatic environments around the world Ichthyofauna is extremely diverse especially in megadiverse countries occupying biogeographical regions such as the Neotropical Region which covers an extensive area between North and South America Much of this biodiversity will be extinct even before science knows any aspect of its biology Like this Neotropical fish genetics started in the end of the 70 s with papers studying the chromosomes of *Hoplias malabaricus* Family Erythrinidae and the karyotype variation among three genera of the family Anostomidae The topic at that time was concentrated in two Institutions from the state of S o Paulo Southeastern Brazil In the middle 80 s the first Symposium on Neotropical Fish Cytogenetics was organized Nowadays the field of Neotropical Fish Genetics is present in Brazil Colombia Argentina Uruguay Venezuela Chile and Ecuador as well as outside South America in Panama Mexico USA Canada Czech Republic Germany and Spain The research developed in cytogenetics has focused mainly on karyotype evolution and cytotaxonomy chromosome structure and more recently cytogenomics In relation to the use of molecular markers support has been sought for the management of populations for conservation or production in captivity In addition many studies have been carried out with the aim of establishing supra specific phylogenetic relationships and clarifying species distribution scenarios by phylogeographic modeling The genome and transcriptome of some model species begin to emerge as extremely promising and informative areas for neotropical fish In 2017 the Neotropical fish genetics research community celebrates the 30th anniversary of its main Meeting today entitled Symposium on Neotropical Fish Genetics and Cytogenetics This Research Topic is part of this celebration and aims at reporting the state of the art and its current advances in the frontier of knowledge in genetics evolution and conservation of neotropical fish as well as to detect the challenges to be overcome in the next years

*Evolutionary Genetics* R. S. Singh, Costas B. Krimbas, 2000-03-28 This book

brings out the central role of evolutionary genetics in all aspects of its connection to evolutionary biology

**Evolutionary Quantitative Genetics** Stevan J. Arnold, 2023-06-19 Evolutionary quantitative genetics EQG provides a formal theoretical foundation for quantitatively linking natural selection and genetic variation to the rate and expanse of adaptive evolution. It has become the dominant conceptual framework for interpreting the evolution of quantitative traits in terms of elementary forces: mutation, inheritance, selection, and drift. Despite this success, the relevance of EQG to many biological scenarios remains relatively unappreciated, with numerous fields yet to fully embrace its approach. Part of the reason for this lag is that conceptual advances in EQG have not yet been fully synthesized and made accessible to a wider academic audience. A comprehensive, accessible overview is therefore now timely, and *Evolutionary Quantitative Genetics* provides this much needed synthesis. The central argument of the book is that an adaptive landscape concept can be used to understand both evolutionary process within lineages and the pattern of adaptive radiations. In particular, it provides a convincing argument that models with a moving adaptive peak carry us further than any other conceptual approach yet devised. Although additive theory holds center stage, the book mentions and references departures from additivity, including non-Gaussian distributions of allelic effects, dominance, epistasis, maternal effects, and phenotypic plasticity. This accessible, advanced textbook is aimed principally at students from senior undergraduate to postgraduate, as well as practising scientists in the fields of evolutionary biology, ecology, physiology, functional morphology, developmental biology, comparative biology, paleontology, and beyond, who are interested in how adaptive radiations are produced by evolutionary and ecological processes.

**Genetics and the Logic of Evolution** Kenneth M. Weiss, Anne V. Buchanan, 2004-01-23 In this book, the authors draw on what is known largely from recent research about the nature of genes and cells, the genetics of development, and animal and plant body plans, intra- and interorganismal communication, sensation, and perception to propose that a few basic generalizations, along with the modified application of the classical evolutionary theory, can provide a broader theoretical understanding of genes, evolution, and the diverse and complex nature of living organisms.

*The Human Evolutionary Transition* Magnus Enquist, Stefano Ghirlanda, Johan Lind, 2023-02-28 A major new theory of why human intelligence has not evolved in other species. *The Human Evolutionary Transition* offers a unified view of the evolution of intelligence, presenting a bold and provocative new account of how animals and humans have followed two powerful yet very different evolutionary paths to intelligence. This incisive book shows how animals rely on robust associative mechanisms that are guided by genetic information, which enable animals to sidestep complex problems in learning and decision making but ultimately limit what they can learn. Humans embody an evolutionary transition to a different kind of intelligence, one that relies on behavioral and mental flexibility. The book argues that flexibility is useless to most animals because they lack sufficient opportunities to learn new behavioral and mental skills. Humans find these opportunities in lengthy childhoods and through culture. Blending the latest findings in fields ranging from psychology to evolutionary anthropology, *The Human Evolutionary Transition* draws on computational analyses of the

problems organisms face extensive overviews of empirical data on animal and human learning and mathematical modeling and computer simulations of hypotheses about intelligence This compelling book demonstrates that animal and human intelligence evolved from similar selection pressures while identifying bottlenecks in evolution that may explain why human like intelligence is so rare

**of Religion** Hansjörg Hemminger, 2021-09-22 The study of religion by the humanities and social sciences has become receptive for an evolutionary perspective Some proposals model the evolution of religion in Darwinian terms or construct a synergy between biological and non Darwinian processes The results however have not yet become truly interdisciplinary The biological theory of evolution in form of the Extended Evolutionary Synthesis EES is only sparsely represented in theories published so far by scholars of religion Therefore this book reverses the line of view and asks how their results assort with evolutionary biology How can the subject area religion integrated into behavioral biology How is theory building affected by the asymmetry between the scarce empirical knowledge of prehistoric religion and the body of knowledge about extant and historic religions How does hominin evolution in general relate to the evolution of religion Are there evolutionary pre adaptations Subsequent versions of evolutionary biology from the original Darwinism to EES are used in interdisciplinary constructs Can they be integrated into a comprehensive theory The biological concept most often used is co evolution in form of a gene culture co evolution However the term denotes a process different from biological co evolution Important EES concepts do not appear in present models of religious evolution e g neutral evolution evolutionary drift evolutionary constraints etc How to include them into an interdisciplinary approach Does the cognitive science of religion CSR harmonize with behavioral biology and the brain sciences Religion as part of human culture is supported by a complex multi level behavioral system How can it be modeled scientifically The book addresses graduate students and researchers concerned about the scientific study of religion and biologist interested in interdisciplinary theory building in the field
