## **Genetics Cell Differentiation And Cancer Bristol Myers Cancer Symposia Vol 7:**

Mechanisms of Differentiation Paul B. Fisher, 1990-09-20 Significant recent advances in cell culture technology now permit a detailed biochemical and molecular analysis of differentiation in both normal and tumor cells. These studies are important in attempting to understand the complex factors involved in normal growth and development as well as the abnormalities associated with carcinogenesis. Mechanisms of Differentiation Volumes I and II is comprised of review chapters addressing various topics of current interest in this important area of research. Topics discussed include genes controlling differentiation, changes in gene expression during differentiation, induction of differentiation as a mode of action of chemotherapeutic agents and the effect of cell shape, growth factors and differentiation modulating agents on the differentiated cell phenotype. Mechanisms of Differentiation is valuable to researchers involved in differentiation and development, carcinogenesis, cell biology, chemotherapy and immunology. Mechanisms of Drug Resistance in Neoplastic Cells Paul V. Woolley, Kenneth D. Tew, 2013-10-22 Bristol Myers Cancer Symposia Volume 9 Mechanisms of Drug Resistance in Neoplastic Cells provides information on both basic scientific and clinical studies on the causes and implications of tumor cell resistance to common antineoplastic agents. The book describes the colon cancer as a model for resistance to antineoplastic drugs, mathematical modeling of drug resistance and the mechanism of induced gene amplification in mammalian cells. The text also discusses the cellular concomitants of multidrug resistance, resistance to alkylating agents and the phosphoprotein and protein kinase C changes in human multidrug resistant cancer cells. Novel drugs that affect glutathione metabolism, the regulation of genes encoding drug metabolizing enzymes in normal and preneoplastic tissues and the relevance of glutathione S transferases to anticancer drug resistance are also considered. The book further tackles the cellular resistance to cyclophosphamide, the preclinical and clinical experiences with drug combinations designed to inhibit DNA repair in resistant human tumor cells and the modification of the cytotoxicity of DNA directed chemotherapeutic agents by polyamine depletion. The text also demonstrates multidrug resistance and the circumvention of resistance. Oncologists, molecular biologists, biochemists, geneticists and pharmacologists will find the book invaluable. **National Library of**

**Cancer Research**, 1994 **Peptide Growth Factors and Their Receptors II** Michael B. Sporn, Anita B.

Roberts, 2012-12-06 This two volume treatise, the collected effort of more than 50 authors, represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors. Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors, the entire field has never been covered in a single treatise. It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone to stay informed on this subject by reading the possible literature. At the same time, it is becoming increasingly apparent that these substances are of universal importance in

biology and medicine and that the original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research

**Molecular and Cellular Biology of Multidrug Resistance in Tumor Cells** I.B. Roninson, 2012-12-06 The ability of neoplastic cells to survive exposure to various chemotherapeutic drugs represents the main obstacle to successful cancer chemotherapy This book deals with a particular type of resistance in tumor cells that represents a single but especially important aspect of the multifaceted problem of cancer drug resistance This type of resistance known as multidrug or pleiotropic drug resistance is characterized by cross resistance of cells to several different classes of cytotoxic drugs including some of the most commonly used anticancer agents Over the last several years there has been a veritable explosion of genetic biochemical and clinical information on multidrug resistance which followed the identification and cloning of the genes responsible for this phenotype and the isolation of monoclonal antibodies against P glycoproteins the products of these genes Elucidation of the molecular mechanism of multidrug resistance has led to the formulation of novel approaches to the prediction of tumor response to chemotherapeutic drugs and increasing the efficacy of cancer therapy Analysis of the structure and function of P glycoproteins from multidrug resistant mammalian cells has also established a prototype for a novel class of eukaryotic membrane proteins which have now been associated with a variety of transport processes in different organisms This book summarizes the results of molecular biological pharmacological biochemical cytogenetic immunological and pathological studies on multidrug resistance in mammalian cells Most of the chapters deal at least to some extent with the structure and expression of P glycoprotein and its role in multidrug resistance
