## CHAPTER 11

## Section 1: Basic Patterns of Human Inheritance

In your textbook, read about basic patterns of human inheritance.

Use the terms below to complete the passage. These terms may be used more than once.

recessive  
heterozygous

allele  
homozygous

cystic fibrosis  
pedigree

dominant  
recessive

A (1) \_\_\_\_\_ shows the inheritance of a particular trait over several generations. An organism with two of the same (2) \_\_\_\_\_ for a particular trait is said to be (3) \_\_\_\_\_ for that trait. An organism with two different (4) \_\_\_\_\_ for a particular trait is heterozygous for that trait. When alleles are present in the (5) \_\_\_\_\_ state, the (6) \_\_\_\_\_ trait will be observable. An individual who is heterozygous for a (7) \_\_\_\_\_ disorder is called a carrier. Examples of recessive genetic disorders in humans are (8) \_\_\_\_\_ and (9) \_\_\_\_\_.

In your textbook, read about recessive and dominant genetic disorders.

Complete the table by writing the disease name for each description.

recessive  
polydactyly

achondroplasia  
Marfan's disease

cystic fibrosis  
Tay-Sachs disease

Disease	Description
10.	caused by altered genes; results in lack of skin pigment
11.	recessive genetic disorder; characterised by body's inability to absorb galactose
12.	recessive genetic disorder; gene found on chromosome 15; characterised by lack of purple eye that characterises father's side
13.	recessive genetic disorder; affects mucous-producing glands, digestive structures, sweat glands
14.	dominant genetic disorder; affects the nervous system

**Handbook of Genetics** Robert King, 1975-12-01 The purpose of the first four volumes of the Handbook of Genetics is to bring together collections of relatively short authoritative essays or annotated compilations of data on topics of significance to geneticists Many of the essays will deal with various aspects of the biology of certain species or species groups selected because they are favorite subjects for genetic investigation in nature or the laboratory Often there will be an encyclopedic amount of

information available on such species with new papers appearing daily Most of these will be written for specialists in a jargon that is bewildering to a novice and sometimes even to a veteran geneticist working with evolutionarily distant organisms For such readers what is needed is a written introduction to the morphology life cycle reproductive behavior and culture methods for the species in question What are its particular advantages and disadvantages for genetic study and what have we learned from it Where are the classic papers the key bibliographies and how does one get stocks of wild type or mutant strains Lists giving the symbolism and descriptions for selected mutants that have been retained and are thus available for future studies are provided whenever possible Genetic and cytological maps mitotic karyotypes and haploid DNA values are also included when available Volume 4 deals with certain vertebrate species that have been studied in considerable detail from the standpoint of genetics or molecular cytogenetics Such data are available for only a relatively few vertebrates
