## Normal kidney

Renal ultrasound is an efficient way to screen the kidneys for major pathology. It is non-invasive and can be completed within minutes. Care must be taken to ensure that appropriate landmarks are found. The

liver should be visualized adjacent to the right kidney and the spleen should be seen adjacent to the left kidney. Determination of normal renal anatomy can be accomplished through utilization of the renal border, pyramids, parenchyma and pelvis as markers.

**Normal right kidney:** Renal border (arrow), liver (\*).

**Normal renal pyramids:** Renal pyramids (small arrows), renal border (large arrow).

**Normal renal pyramids:** Renal pyramids (small arrows), renal border (large arrow).

**Perinephric fat:** Perinephric fat (arrow), adipose capsule of the kidney, renal parenchyma (\*).
