Visualization of Nucleic Acids Gerard Morel, 1995-03-30 This book presents a review of the principle approaches for visualizing DNA and RNA Using scanning tunneling and atomic force microscopes the three dimensional image of the surface of nucleic acids can be seen at atomic scale resolutions Spreading methods provide useful details on structural features of isolated molecules but the major constituent of living matter is water and the cryomicroscope makes it possible to look at DNA in its agueous environment Genes can be detected simultaneously in situ in chromosomes using fluorescent probes and also at the electron microscopic level In cells nucleic acids are localized and quantified by dyes electron microscopy is used with cytochemical immunocytological nuclease and in situ hybridization methods. Glick, Carter Van Waes, 2010-11-25 Squamous epithelia form the lining surface of tissues in contact with the environment the skin oral mucosa esophagus and respiratory tract the genital tract and several other specialized tissues These tissues are at highest risk for exposure to environmental carcinogens such as UV tobacco smoke and infectious agents Cancers that form in squamous epithelia are among the most common human solid tumors and have high morbidity and mortality These cancers include squamous cell carcinoma of the skin oral cancer head and neck and esophageal cancer certain lung cancers and cervical cancer We propose to organize the book so that the early chapters will focus on individual pathways and more specific mechanisms in both normal function and cancer while the later chapters will be more integrative and include overviews of biomarkers and therapeutic development This should increase interest for
