Geography and Geographers Ron Johnston, James Sidaway, 2015-12-22 Explores the relationship between human and physical geography All chapters updated in the new edition to reflect new literature and changes in the discipline Chapter One systematically considers representations of geographical thought The closing chapter develops an explicit argument about what has made human geography distinctive Draws on a wide reading of the geographical literature produced during a fifty year period characterised by both growth in the number of academic geographers and substantial shifts in conceptions of the discipline s scientific rationale

The Evolving Geography of Productivity and Employment Elena Ianchovichina, 2024-03-22 The Evolving Geography of Productivity and Employment Ideas for Inclusive Growth through a Territorial Lens in Latin America and the Caribbean employs a territorial lens to understand the persistently low economic growth rates in Latin America and the Caribbean LAC Using new data and methods it shows that deindustrialization distance and divisions offer intertwined explanations for an urban productivity paradox in the LAC region its highly dense cities

should be among the world's most productive yet they are not. LAC cities have been held back by lack of dynamism, poor connectivity and divisions into disconnected poor and affluent neighborhoods. Deindustrialization has shifted urban employment especially in the largest LAC cities away from manufacturing and toward less dynamic, low productivity, nontradable activities such as retail trade and personal and other services that profit less from agglomeration especially in highly congested cities. Although employment in urban tradable services has risen, the increase has not been strong enough to offset the decline in manufacturing employment. Meanwhile, intercity connectivity issues have undermined the performance of the region's network of cities by restricting market access and firms' ability to benefit from specialization in smaller cities. Within cities, poor connectivity and residential labor market segregation have limited the gains from agglomeration to neighborhoods in central business districts where formal firms operate. Informality has persisted in low income neighborhoods where residents face multiple deprivations. By contrast, many agricultural and mining areas have benefited from the strong demand for commodities by China and other fast growing economies, particularly during the Golden Decade 2003-13, leading to a decline in territorial inequality in most countries in the region. The report concludes that to encourage inclusive growth, countries must more efficiently transform natural wealth into human capital, infrastructure and institutions and improve the competitiveness of the urban economy. It then sketches out the contours of such a development strategy, identifying policy priorities at the national, regional and local levels.

Geographic Citizen Science Design Artemis Skarlatidou, Muki Haklay, 2021-02-04. Little did Isaac Newton, Charles Darwin and other gentlemen scientists know when they were making their scientific discoveries that some centuries later they would inspire a new field of scientific practice and innovation called citizen science. The current growth and availability of citizen science projects and relevant applications to support citizen involvement is massive: every citizen has an opportunity to become a scientist and contribute to a scientific discipline without having any professional qualifications. With geographic interfaces being the common approach to support collection, analysis and dissemination of data contributed by participants, geographic citizen science is being approached from different angles. Geographic Citizen Science Design takes an anthropological and Human Computer Interaction (HCI) stance to provide the theoretical and methodological foundations to support the design, development and evaluation of citizen science projects and their user friendly applications. Through a careful selection of case studies in the urban and non urban contexts of the Global North and South, the chapters provide insights into the design and interaction barriers as well as on the lessons learned from the engagement of a diverse set of participants, for example, literate and non literate people with a range of technical skills and with different cultural backgrounds. Looking at the field through the lenses of specific case studies, the book captures the current state of the art in research and development of geographic citizen science and provides critical insight to inform technological innovation and future research in this area.

Changing Geography of Banking and Finance Pietro Alessandrini, Michele Fratianni, Alberto Zazzaro, 2009-06-16 The editors
 and contributors tackle a timely subject and present rigorous research and analysis to demonstrate counter intuitive results
 In so doing they reinforce the connections between organization and policy in the banking industry and its impact on
 entrepreneurship through lending and credit to small and medium sized businesses The editors present a carefully organized
 manuscript that presents both literature reviews and the results of original empirical research that will be of interest to
 academics and professionals in finance economics and policy The authorship and coverage are global One of the authors
 Michele Fratianni has close ties to Springer by virtue of his being a founding editor of *Open Economies Review* and co editor
 of the book series *European and Transatlantic Studies* *Geography Solved Papers* YCT Expert Team , 2023 24 NTA UGC
 NET JRF Geography Solved Papers *Landfill Closures* R.M. Koerner, 2013-10-22 It is toward investigating discussing and
 presenting the various issues involved in solid waste closure that this book is focused It consists of invited papers presented
 at the 4th Annual Geosynthetic Research Institute Seminar The closure capping of completed or abandoned solid waste
 facilities present particular challenges for example there usually exists a very uncertain and random subsidence behaviour of

the existing waste beneath the closure the friction behaviour of the various interfaces that are involved in solid waste facilities is not established there are numerous long term geosynthetic stability and durability issues that must be addressed and there are an extremely large number of sites that require proper closure These topics are addressed in the three sessions Geosynthetics in Landfill Closures Interface Friction Considerations and Geocomposites Systems and New Materials Current materials and basic techniques are reviewed and innovations discussed Owners perspectives and design considerations raised and specific problems such as liquid intrusion are addressed The area of landfill closure simply begs innovation and the manufacturing sector is meeting the challenge This gathering of expert opinions is an important document of the proper use of geosynthetics in landfill closure systems
