

The background is a deep blue with a complex, abstract pattern. A network of thin, light blue lines forms a mesh-like structure, resembling a globe or a digital network. A prominent, bright blue lightning bolt strikes diagonally across the frame, adding a sense of energy and dynamism. The overall aesthetic is high-tech and futuristic.

Masser, 2003-09-02

Modern geographic information systems technology has transformed spatial data handling capabilities and made it necessary for governments to rethink their roles with respect to the supply and availability of geographic information The nature of the relationship between governments and geographic information is explored in this book from a number of different conceptual positions with reference to the experiences of Britain the Netherlands Austria and the United States and particularly with respect to the development of national geographic information strategies The book examines the role that can be played both directly through a variety of policy initiatives and also indirectly because of the extent to which they create the broader institutional context within which these are developed and implemented The discussion is divided into three main parts The

first of these considers what is Special About Geographic Information And Evaluates The Notion Of geographic information from four different standpoints as a resource a commodity an asset and an infrastructure The second part presents the findings from four case studies of national geographic information strategies while the final section evaluates these experiences with a view to identifying what general lessons can be learnt from them

**Smart Geospatial Practices and Applications in Local Government** David A. Fiorentino, 1996-09-30 The last few years have witnessed an enormous interest in application of GIS in hydrology and water resources. This is partly evidenced by organization of several national and international symposia or conferences under the sponsorship of various professional organizations. This increased interest is in a large measure in response to growing public sensitivity to environmental quality and management. The GIS technology has the ability to capture, store, manipulate, analyze, and visualize the diverse sets of geo-referenced data. On the other hand, hydrology is inherently spatial and distributed. Hydrologic models have large data requirements. The integration of hydrology and GIS is therefore quite natural. The integration involves three major components: 1. spatial data construction, 2. integration of spatial model layers, and 3. GIS and model interface. GIS can assist in design, calibration, modification, and comparison of models. This integration is spreading worldwide and is expected to accelerate in the foreseeable future. Substantial opportunities exist in integration of GIS and hydrology. We believe there are enough challenges in use of GIS for conceptualizing and modeling complex hydrologic processes and for globalization of hydrology. The motivation for this book grew out of the desire to provide under one cover a range of applications of GIS technology in hydrology. It is hoped that the book will stimulate others to write more comprehensive texts on this subject of growing importance.
