Geographical Issues In The Soviet Union:

The Soviet Environment John Massey Stewart, 1992-05-07 This book originally published in 1992 describes the Soviet environment at its crisis point in the late 1980s and early 1990s. Belarus and the Ukraine had as a result of the Chernobyl accident been declared ecological disaster zones and across the country as a whole as many as 20 per cent of the population lived in environmental danger areas and another 35-40 per cent in unsatisfactory conditions. According to a Supreme Soviet Environment Committee report of 1989 80% of all illness in the USSR related either directly or indirectly to environmental problems. In this book leading specialists from both the West and the Soviet Union present a comprehensive analysis of these problems. The contributors examine the aftermath of Chernobyl, the catastrophic causes and effects of the Aral Sea's shrinkage, the environmental issues and public unrest. The depth of analysis in this volume together with the breadth of topics addressed will ensure that it is read by students and specialists of the Soviet Union and environmental issues as well as by all government officials, journalists and industrialists with an interest in the Soviet environment. Geographical Issues in the Soviet Union David Flint, 1990 A study of the geographical issues such as environmental change and economic and ethnic unrest which have been highlighted in the Soviet Union. It provides a basis for all GCSE examination courses National Curriculum Key Stage 4 and is linked to a BBC schools television and radio series. *Environmental Management in the Soviet Union* Philip R. Pryde, 1991-07-26 In this study of Soviet environmental problems and their management the author examines the pervasive nature of biosphere disruption and environmental contaminants in the country. He discusses the extent to which they are damaging the Soviet populace and the resource base upon which it depends. **Geographic and Global Issues Quarterly**, 1992 **Environmental Problems in East-Central Europe** Frank Carter, David Turnock, 2002-09-26 In this new edition the progress made in the last decade to solve the environmental problems described in the first edition is assessed. The attempts to bring environmental legislation into line with West European norms is also described. *Environmental Problems of East Central Europe* looks at air and water pollution, modern farming, water supplies, waste management and landscape protection. These topics are placed within economic, social and political profiles as spending on a clean environment must be reconciled with welfare spending and the safeguarding of jobs. European Union assistance, civil society and the work of environmental NGOs are also discussed. All of these matters are considered within the context of the wider geographical area and then by each individual country including the previously communist states lying to the west of the Soviet Union, now with the former federal states of Czechoslovakia and Yugoslavia broken up into seven different entities and a review of the former Soviet Union with particular reference to the Baltic States. *Environmental Problems in East Central Europe* provides a wealth of up to date reference material with a vast amount of supporting literature on environmental conditions and the functioning of civil society and a map of each country. The environment is being taken seriously by them all such is the influence of the Rio sustainability agenda in general and the EU environmental

acquired in particular. The book reveals that Eastern Europe is not a blighted area but in some respects has a higher biodiversity than Western Europe. Although there is enormous waste and inefficiency in energy use, people actually consume relatively little and the East therefore has some lessons for the West in terms of managing on the basis of a fair share of the earth's resources. *Geographic Notes*, 1985

An Environmental History of Russia Paul Josephson, Nicolai Dronin, Ruben Mnatsakanian, Aleh Cherp, Dmitry Efremenko, Vladislav Larin, 2013-04-08 The former Soviet empire spanned eleven time zones and contained half the world's forests, vast deposits of oil, gas and coal, various ores, major rivers such as the Volga, Don and Angara and extensive biodiversity. These resources and animals as well as the people who lived in the former Soviet Union—Slavs, Armenians, Georgians, Azeris, Kazakhs and Tajiks, indigenous Nenets and Chukchi—were threatened by environmental degradation and extensive pollution. This environmental history of the former Soviet Union explores the impact that state economic development programs had on the environment. The authors consider the impact of Bolshevik ideology on the establishment of an extensive system of nature preserves, the effect of Stalinist practices of industrialization and collectivization on nature, and the rise of public involvement under Khrushchev and Brezhnev, and changes to policies and practices with the rise of Gorbachev and the break up of the USSR.

A Guide to Information Sources in the Geographical Sciences Stephen Goddard, 1983-01-01 Geography is a wide-ranging discipline and the number of information sources available is truly enormous. These include printed books and journal articles, maps, satellite photographs, archives, statistical information and much else. One particular problem facing geographers is that when one studies a foreign country, information may be available only in the foreign country and difficult to obtain. This book discusses the information sources available to geographers.

Environmental Resources And Constraints In The Former Soviet Republics Philip Pryde, 2019-06-03 The rapid changes in the former Soviet Union have rendered most pre-1992 works on its environment obsolete. A more specifically geographic approach that highlights the particular situation in each republic and region is offered by Philip R. Pryde's new work *Environmental Resources and Constraints in the Former Soviet Republics*. Focusing broadly on

World Regional Geography Concepts Lydia Mihelic Pulsipher, Alex Pulsipher, Conrad M. Goodwin, 2009-03-27 The authors of *World Regional Geography* have answered the need for an exceptionally brief textbook for the evolving world regional course. In *World Regional Geography Concepts*, eight major thematic concepts frame the coverage and give students a way of approaching the wealth of information in the text. Like the Pulsiphers' longer text *World Regional Geography Concepts*, it emphasizes global trends and the interregional linkages that are changing lives throughout the world, humanizes geographical issues by representing the lives of women, men and children in various regions of the globe.

World Regional Geography (with Subregions) Lydia Mihelic Pulsipher, Alex Pulsipher, 2007-09-14 Shows how individuals are affected by and respond to economic, social and political forces at all levels of scale: global, regional and local. It offers an inclusive picture of people in a globalizing world: men, women, children, both mainstream and marginalized citizens, not as seen

from a western perspective but as they see themselves Core topics of physical economic cultural and political geography are examined from a contemporary perspective based on authoritative insights from recent geographic theory and examples from countries from around the world

An Introduction to Global Environmental Issues Kevin T. Pickering, Lewis A. Owen, 1997 An Introduction to Global Environmental Issues presents a comprehensive and stimulating introduction to the key environmental issues presently threatening our global environment Offering an authoritative introduction to the key topics a source of latest environmental information and an innovative stimulus for debate this is an essential book for all those studying or concerned with global environmental issues Major global environmental issues are brought into focus Explanations of the evolution of the earth's natural systems hydrosphere biosphere geosphere ecosphere provide an essential understanding of the scientific concepts processes and historical background to environmental issues Contemporary socio economic cultural and political considerations are explored and important conceptual approaches such as Gaian hypotheses and Chaos Theory are introduced Human impact and management of the natural environment and concerns for maintaining biodiversity are emphasised throughout Specific features include Case studies drawn from across the world Superb illustrations 4 colour plate sections a wealth of informative diagrams Glossary of key terms with key concepts highlighted throughout the text Annotated guides to further reading Chapter summaries and key points A Lecturers Manual is available to accompany the text This 2nd Edition has been extensively revised and expanded to include many new illustrations up to date data including the latest IPCC data and the most recent events including Khobe earthquake French nuclear testing the Berlin conference and the Antarctic Treaty Sections on ecosystems techniques pollution tectonics risk and hazard mitigation world populations and issues of human impact and environmental management have been particularly expanded in this new edition
