Marinos,1997 Geomechanics and Geotechnics of Particulate Media Masayuki Hyodo,Hidekazu Murata,Yukio Nakata,2017-12-14 Microscopic re examination of geomaterials consisting of aggregates can shed light on macroscopic behaviour including compressibility anisotropy yielding creep cyclic liquefaction and shear rupture As a result of this process of examination new methods of material characterization emerge leading to a greater degree of accuracy in the specification of new constitutive models with physically meaningful parameters The impetus behind this development is an increasing awareness on sustainability leading to the more efficient use of recycled materials for geotechnical applications The characteristics of recycled materials such as compressibility and self hardening may differ significantly from those of natural materials and it is crucial that evaluation is made from a specifically particulate perspective Environmental Soil-Landscape Modeling Sabine Grunwald,2016-04-19 Environmental Soil Landscape Modeling Geographic Information Technologies and Pedometrics presents the latest methodological developments in soil landscape modeling It analyzes many recently developed measurement tools and explains computer related and pedometric techniques that are invaluable in the modeling process This volume provides *The Geotechnics of Hard Soils - Soft Rocks* - Aldo Evangelista,1998 *Engineering Geology and the Environment* G.C. Koukis,P.G. Marinos,G.C. Stourna,G.C. Tsiambaos,1997-01-01 Composed of the proceedings of a symposium on engineering geology and the environment held in Athens in June 1997 this work provides a survey of trends in engineering geology and an interdisciplinary collaboration with hydrogeology geochemistry geomorphology and soil and rock mechanics

Handbook of Soil Sciences (Two Volume Set) Pan Ming Huang,Yuncong Li,Malcolm E. Sumner,2018-10-03 An evolving living organic inorganic covering soil is in dynamic equilibrium with the atmosphere above the biosphere within and the geology below It acts as an anchor for roots a purveyor of water and nutrients a residence for a vast community of microorganisms and animals a sanitizer of the environment and a source of raw materials for construction *Environmental Soil Properties and Behaviour* Raymond N. waste repositories structures require that soils maintain their design engineering properties if the structures are to reach their projected life spans The same is true for earth dams levees buffers barriers for landfills and other structures that use soils as engineered materials Yet soil a natural resource continues to change as a result of natural and anthropogenic stresses As the discipline of soil properties and behaviours matures new tools and techniques are making it possible to study these properties and behaviours in more depth

What Happens to Soil Under Weathering Aging and Chemical Stress Environmental Soil Properties and Behaviour examines changes in soil properties and behaviour caused by short and long term stresses from anthropogenic activities and environmental forces Introducing new concepts of soil behaviour soil maturation and soil functionality it integrates soil physics soil chemistry and soil mechanics as vital factors in soil engineering The book focuses on environmental soil behaviour with particular attention to two main inter related groups of soil environment issues The first is the use of soil as an environmental tool for management and containment of toxic and hazardous waste materials The second is the impact of ageing and weathering processes and soil contamination on the properties and behaviour of soils especially those used in geotechnical and geoenvironmental engineering projects

A Transdisciplinary Look at Soil Changing Processes To determine short and long term soil quality and soil functionality the authors emphasize the need to be aware of the nature of the stressors involved as well as the kinds of soil changing processes that are evoked This book takes a first step toward a much needed transdisciplinary effort to develop a broader and deeper understanding of what happens to soil and how we can determine and quantify the effect of biogeochemical processes It offers a timely resource for the study of soil properties and behaviours effects of environmental changes and remediation of contaminated soil

Landslide Science for a Safer Geoenvironment Kyoji Sassa, Paolo Canuti, Yueping Yin, 2014-05-19 This volume contains peer reviewed papers from the Third World Landslide Forum organized by the International Consortium on Landslides ICL in June 2014 The complete collection of papers from the Forum is published in three full color volumes and one mono color volume

Engineering Geology and Geomorphology of Glaciated and Periglaciated Terrains J.S. Griffiths, C.J. Martin, 2017-10-18 The Engineering Group of the Geological Society Working Party brought together experts in glacial and periglacial geomorphology Quaternary history engineering geology and geotechnical engineering to establish best practice when working in former glaciated and periglaciated environments The Working Party addressed outdated terminology and reviewed the latest academic research to provide an up to date understanding of glaciated and periglaciated terrains This transformative state of the art volume is the outcome of five years of deliberation and synthesis by the Working Party This is an essential reference text for practitioners students and academics working in these challenging ground conditions The narrative style and a comprehensive glossary and photo catalogue of active and relict sediments structures and landforms make this material relevant and accessible to a wide readership
