Transit Development in Rock Mechanics Meifeng Cai, Yang Gengshe, Jin'an Wang, 2014-10-20 Transit Development in Rock Mechanics Recognition Thinking and Innovation contains 150 papers presented at the 3rd ISRM International Young Scholars Symposium on Rock Mechanics 8-10 November 2014 Xi'an China. The volume focusses on the transitional development in rock mechanics research from surface to underground mining and from shallow to deep rock excavations and on the transition of knowledge thinking and innovation from pioneers to the young generation. The contributions cover a wide range of topics: Field investigation and measurements; Physical and mechanical properties of rocks; Analysis and design methods for rock engineering; Numerical and physical modeling; Multi-fields coupling analysis methods; Rock slope, tunnel and foundation engineering; Monitoring and control of rock pressure in underground engineering; Dynamic rock mechanics and blasting; Support and reinforcement techniques for geotechnical engineering; Prediction and control of artificial hazards with excavation in rock. Transit Development in Rock Mechanics Recognition Thinking and Innovation will be invaluable to engineers and academics interested or involved in rock mechanics, geotechnical engineering, mine engineering and underground engineering. Renewable Energy law and Development Richard L. Ottinger, 2013 Half the world's new electric generating capacity added each year from 2008 onwards has been renewable, mainly now in developing countries. So is the quarter trillion dollars a year of private investment in modern renewable energy. Organizations like REN21 and Bloomberg New Energy Finance track exciting and accelerating recent progress. But to understand how these renewable energy efforts in major developing countries have been structured and are evolving requires a guidebook with a legal and institutional perspective. Energy veteran Richard Ottinger and his Pace Law School graduate students from many key countries have now provided that guide, clearly written, well organized and a great public service. Amory B. Lovins, Rocky Mountain Institute, US; Richard Ottinger, a pioneer in the development of national policy to promote renewable energy in the US and his Pace Law School research assistants have created a unique piece of work on the legal and policy issues behind the global growth of renewable energy. Their book is indispensable as a text for law professors and students and as the definitive reference for lawyers and policymakers about developing and emerging country policies driving renewable energy use around the world. The fact that most of the research assistants are natives of the countries on which they researched and wrote their respective chapters gives the book uniquely credible insights into the legal and policy challenges faced by these countries, providing valuable lessons for others wanting to build renewable energy capacity in their own countries. Robert Noun, Former Executive Director of Public Affairs, National Renewable Energy Laboratory and Adjunct Professor, University of Denver Sturm College of Law, US. This book is unique in the literature on

renewable energy law and policy Firstly it focuses on developing countries which means it fills the gap in international literature currently lacking on law and policy on renewable energy in developing countries Secondly it applies a basic uniform analysis method to each of the case studies This makes the results of the case studies considerably comparable Finally based on the introduction to the related laws policies and projects of the target countries the author summarizes their experience and lessons It is these summaries that reflect the purpose and value of this book Wang Xi Shanghai Jiao Tong University Shanghai China This is a unique book written by one of the leading scholars in the field It uses detailed case studies to analyze the successes failures and challenges of renewable energy initiatives in developing and emerging countries Incorporating the insights and perspectives of researchers who come from the respective countries covered the study compares some of the most exciting success stories including Chinas meteoric rise from near zero use of renewable energy to being the world leader in solar thermal solar photovoltaic and wind energy Brazils success in becoming the worlds top ethanol producer and exporter and Indias pioneering use of a hedge plant to produce biodiesel and its use of animal and human wastes for rural electrification The book also describes Indonesias disastrous palm oil program which cut down its forests and excavated its peat bogs It concludes that good leadership is the largest factor in success but that it is also critical to include public participation training transparency environmental consideration fair labor practices protection against exploitation and enforcement This book is designed to be helpful to other countries seeking to initiate renewable energy programs It will appeal to local administrators and policymakers field personnel from UN agencies and NGOs and renewable energy funders as well as to academic researchers

Radioactive Waste Christian Streffer, Carl Friedrich Gethmann, Georg Kamp, Wolfgang Kröger, Eckard Rehbinder, Ortwin Renn, 2011-11-16 Radioactive waste above all highly radioactive wastes from nuclear installations caused by research medicine and technology must be disposed of safely However both the strategies disputed for the disposal of radioactive waste as well as concrete proposals for choosing a

location for final waste disposal are highly debatable An appropriate disposal must conform to both complex technical requirements and fulfill the radio biological conditions to appropriately protect man and nature Ethical legal and social conditions must also be considered An interdisciplinary team from various relevant fields compiled the current status quo and developed criteria and strategies which on the one hand meet the requirements of optimal warning and prevention of risk for present and future generations and additionally on the other hand meet the needs of what current society agrees what is expected to be allowed This study can be understood as an advanced and continuing contribution to the corresponding scientific specialized debates due to its interdisciplinary treatment At the same time it serves as a fundamentally informing contribution to public and political debates offering an easily comprehensible executive summary and precise content recommendations *Artifacts, Representations and Social Practice* C. Cohen, 2012-12-06 The essays collected here in honor of Marx Wartofsky's sixty fifth birthday are a celebration of his rich contribution to philosophy over the past four decades and a testimony to the wide influence he has had on thinkers with quite various approaches of their own His diverse philosophical interests and main themes have ranged from constructivism and realism in the philosophy of science to practices of representation and the creation of artifacts in aesthetics and from the development of human cognition and the historicity of modes of knowing to the construction of norms in the context of concrete social critique Or again in the history of philosophy his work spans historical approaches to Hegel Feuerbach and Marx as well as contemporary implications of their work and in applied philosophy problems of education medicine and new technologies Marx's philosophical theorizing moves from the highest levels of abstraction to the most concrete concern with the everyday and with contemporary social and political reality And perhaps most notably it is acutely sensitive to the importance of historical development and social practice As a student of John Herman Randall Jr and Ernest Nagel at Columbia Marx developed an exemplary background in both the history of philosophy and systematic philosophy and subsequently combined this with a wide acquaintance with analytic philosophy He is at once aware of the requirements of system and of the need for rigorous and careful detailed argument **Radioactive Waste Management**, 1981
