Geomedical Systems Intervention And Control:

Geomedical Systems Richard Thomas, 1992-01-01 Geomed '97 Lothar Gierl, Andrew Cliff, Alain-Jacques Valleron, Paddy Farrington, Mathias Bull, 2012-12-06 A key event in the development of modern epidemiology was the discovery by the English physician John Snow that cholera is transmitted by contaminated water. During the cholera epidemic in London in 1854, Snow mapped the locations of cholera deaths, observed a cluster of victims in a particular neighbourhood, and found that most of these cases had drunk water from a communal water pump. The handle of the pump was removed at Snow's insistence and the epidemic ended within a few days. Since these early days, the science of epidemiology has grown into a major discipline with many successes to its credit. Many of the diseases which wreaked havoc in the last century have been brought under control and, in the case of smallpox, eliminated through improvements in hygiene and the use of preventive and control measures such as mass vaccination. Nevertheless, in recent years, new problems have emerged and old diseases have re-emerged. Many foodborne and waterborne disease outbreaks go unrecognized or are detected too late for effective control measures to be implemented. New infections such as HIV present new threats. Antimicrobial drug resistance, particularly the increase in drug-resistant TB, also poses new challenges.

Medical Geography, Third Edition Melinda S. Meade, Michael Emch, 2010-04-20 The leading text in the field, this comprehensive book reviews geographic approaches to studying disease and public health issues across the globe. It presents cutting-edge techniques of spatial and social analysis and explores their relevance for understanding cultural and political ecology, disease systems, and health promotion. Essential topics include how new diseases emerge and epidemics develop in particular places, the intersecting influences on health of biological processes, culture, environment, and behavior, and the changing landscape of health care planning and service delivery. The text is richly illustrated with tables, figures, and maps, including 16 color plates.

Spatial Analysis, GIS and Remote Sensing Donald P. Albert, Wilbert M. Gesler, Barbara Levergood, 2000-09-01 This new book explores the rapidly expanding applications of spatial analysis, GIS, and remote sensing in the health sciences and medical geography.

This volume is an outline of global environmental and global population data, including scripts for predicting disease distributions and evaluating the accuracy of these mapped products. Several application chapters discuss current research topics appropriately addressed at the global scale. Topics such as tick-borne disease and the mapping of geographic and phylogenetic space, implications of global ecozonation, and transportation networks on pathogen flow, and the impacts of climate change on vector-borne diseases are covered in this latest volume. Includes DVD of global environmental and global population data, including scripts for predicting disease distributions and evaluating the accuracy of these mapped products. transportation fresh food markets and schools could make some communities as a whole more vulnerable and less resilient to adverse health effects This somber reality suggests that it is rather the question of who you are depends upon where you are and the fact that health inequality is both a people and a place concern That is why health inequality needs to be investigated in a spatial setting to deepen our understanding of why and how some geographical areas experience poorer health than others This book introduces how spatial context shapes health inequalities Spatial Health Inequalities Adapting GIS Tools and Data Analysis demonstrates the spatial health inequalities in six most important topics in environmental and public health including food insecurity birth health outcomes infectious diseases children s lead poisoning chronic diseases and health care access These are the topics that the author has done extensive research on and provides a detailed description of the topic from a global perspective Each chapter identifies relevant data and data sources discusses key literature on appropriate techniques and then illustrates with real data with mapping and GIS techniques This is a unique book for students geographers clinicians health and research professionals and community members interested in applying GIS and spatial analysis to the study of health inequalities

HIV/AIDS in Bangladesh Alak Paul,2020-10-13 This book aims to show the conditions and behaviors of vulnerable and marginalized people in Bangladesh which put them at risk of HIV AIDS infection and what their adopted coping strategies are and how these play out In addition the book seeks to gain an understanding of the perceptions of civil society and policy planners with respect to vulnerability to HIV and the necessary mitigation measures While there is much published literature on the epidemiology and etiology for the most at risk groups in the region there has not yet been any in depth research concerning the socio cultural and geographic impacts of HIV issues in Bangladesh Almost all of the literature shows HIV as an epidemiological problem rather than investigating it from a social or

cultural point of view and still less using qualitative methods The present work is an endeavor to fill these gaps by providing valuable qualitative field data to demonstrate the causes of HIV risk and vulnerability and to examine the nature of the social and locational context of HIV AIDS in Bangladesh and to assist with health care policy planning The book will be of use to students and researchers studying public health health geography medical sociology medical anthropology social psychology and social epidemiology and to professionals in the fields of development community medicine health management and social policy

Spatial Analysis in Health Geography Pavlos Kanaroglou, Eric Delmelle, 2016-03-09 Presenting current research on spatial epidemiology this book covers topics such as exposure chronic disease infectious disease accessibility to health care settings and new methods in Geographical Information Science and Systems For epidemiologists and for the management and administration of health care settings it is critical to understand the spatial dynamics of disease For instance it is crucial that hospital administrators develop an understanding of the flow of patients over time especially during an outbreak of a particular disease so they can plan for appropriate levels of staffing and to carry out adaptive prevention measures Furthermore understanding where and why a disease occurs at a certain geographic location is vital for decision makers to formulate policy to increase the accessibility to health services either by prevention or adding new facilities Spatial epidemiology relies increasingly on new methodologies such as clustering algorithms visualization and space time modelling the domain of Geographic Information Science Implementation of those techniques appears at an increasing pace in commercial Geographic Information Systems alongside more traditional techniques that are already part of such systems This book provides the latest methods in GI Science and their use in health related problems

Geographical Targeting for Poverty Alleviation David Bigman, Hippolyte Fofack, 2000-01-01 in many developing countries there are large differences in economic conditions and the standard of living between regions and even between communities within the same region In many countries poverty has a clear geographic dimension since the poor are often concentrated in pockets of poverty Therefore the design of poverty alleviation policies must also have a significant spatial component Although development projects are carefully designed and meticulously evaluated for cost effectiveness and benefits too many of them are not sufficiently targeted geographically The growing availability and use of spatial data organized in a computer system such as a geographical information system GIS makes it more feasible to analyze the impact of projects in specific locales and to achieve more effective targeting Geographical Targeting for Poverty Alleviation introduces the basic concepts of a GIS It also demonstrates how to organize geographic and nongeographic data In addition it presents different methods for using the data of the Household Income and Expenditure Survey together with other surveys and the population census to provide estimates for the standard of living and the

incidence of poverty incidence in different geographical areas of a country Ultimately these estimates should be used to establish guidelines for targeting poverty alleviation projects This publication illustrates different GIS applications for identifying the project s target population determining the project s spatial sphere of influence or deciding where to locate public facilities This publication is of interest to task managers economists development researchers and geographers
