Higher Index Theory Rufus Willett, Guoliang Yu, 2020-07-02 A friendly introduction to higher index theory a rapidly developing subject at the intersection of geometry topology and operator algebras A well balanced combination of introductory material with exercises cutting edge developments and references to the wider literature make this book a valuable guide for graduate students and experts alike

Index Theory of Elliptic Operators, Foliations, and Operator Algebras Jerome Kaminker, Kenneth C. Millett, American Mathematical Society, 1988 Combining analysis geometry and topology this volume provides an introduction to current ideas involving the application of K theory of operator algebras to index theory and geometry In particular the articles follow two main themes the use of operator algebras to reflect properties of geometric objects and the application of index theory in settings where the relevant elliptic operators are invertible modulo a C algebra other than that of the compact operators The papers in this collection are the proceedings of the special sessions held at two AMS meetings the Annual meeting in New Orleans in January 1986 and the Central Section meeting in April 1986 Jonathan Rosenberg s exposition supplies the best available introduction to Kasparov s KK theory and its applications to representation theory and geometry A striking application of these ideas is found in Thierry Fack s paper which provides a complete and detailed proof of the Novikov Conjecture for fundamental groups of manifolds of non positive curvature Some of the papers involve Connes foliation algebra and its K theory while others examine C algebras associated to groups and group actions on spaces

Geometric and Topological Invariants of Elliptic Operators Jerome Kaminker, American Mathematical Society, 1990 This volume contains the proceedings of the AMS IMS SIAM Summer Research Conference on Geometric and Topological Invariants of Elliptic Operators held in August 1988 at Bowdoin College Some of the themes covered at the conference and appearing in the articles are the use of more sophisticated asymptotic methods to obtain index theorems the study of the eta invariant and analytic torsion and index theory on open manifolds and foliated manifolds The current state of noncommutative differential geometry as well as operator algebraic and K theoretic methods are also presented in several the articles This book will be useful to researchers in index theory operator algebras foliations and mathematical physics Topologists and geometers are also likely to find useful the view the book provides of recent work in this area In addition because of the expository nature of several of the articles it will be useful to graduate students interested in working in these areas

L2-Invariants: Theory and Applications to Geometry and K-Theory Wolfgang Lück, 2002-08-06 In algebraic topology some classical invariants such as Betti numbers and Reidemeister torsion are defined for compact spaces and finite group actions They can be generalized using von Neumann algebras and their traces and applied also to non compact spaces and infinite groups These new L2 invariants contain very interesting and novel information and can be applied to problems arising in topology K Theory differential geometry non commutative geometry

and spectral theory The book written in an accessible manner presents a comprehensive introduction to this area of research as well as its most recent results and developments

C * -Algebras and Elliptic Operators in Differential Topology
I_U_r_i_ Petrovich Solov_ _v Evgeni_ Vadimovich Troit_s_ki_,2000-10-03 The aim of this book is to present some applications of functional analysis and the theory of differential operators to the investigation of topological invariants of manifolds The main topological application discussed in the book concerns the problem of the description of homotopy invariant rational Pontryagin numbers of non simply connected manifolds and the Novikov conjecture of homotopy invariance of higher signatures The definition of higher signatures and the formulation of the Novikov conjecture are given in Chapter 3 In this chapter the authors also give an overview of different approaches to the proof of the Novikov conjecture First there is the Mishchenko symmetric signature and the generalized Hirzebruch formulae and the Mishchenko theorem of homotopy invariance of higher signatures for manifolds whose fundamental groups have a classifying space being a complete Riemannian non positive curvature manifold Then the authors present Solovyov s proof of the Novikov conjecture for manifolds with fundamental group isomorphic to a discrete subgroup of a linear algebraic group over a local field based on the notion of the Bruhat Tits building Finally the authors discuss the approach due to Kasparov based on the operator KK theory and another proof of the Mishchenko theorem In Chapter 4 they outline the approach to the Novikov conjecture due to Connes and Moscovici involving cyclic homology That allows one to prove the conjecture in the case when the fundamental group is a Gromov hyperbolic group The text provides a concise exposition of some topics from functional analysis for instance C Hilbert modules K theory or C bundles Hermitian K theory Fredholm representations KK theory and functional integration from the theory of differential operators pseudodifferential calculus and Sobolev chains over C algebras and from differential topology characteristic classes The book explains basic ideas of the subject and can serve as a course text for an introduction to the study of original works and special monographs

Noncommutative Geometry Alain Connes,Joachim Cuntz,Erik G. Guentner,Nigel Higson,Jerome Kaminker,John E. Roberts,2003-12-08 Noncommutative Geometry is one of the most deep and vital research subjects of present day Mathematics Its development mainly due to Alain Connes is providing an increasing number of applications and deeper insights for instance in Foliations K Theory Index Theory Number Theory but also in Quantum Physics of elementary particles The purpose of the Summer School in Martina Franca was to offer a fresh invitation to the subject and closely related topics the contributions in this volume include the four main lectures cover advanced developments and are delivered by prominent specialists
