Construction and Maintenance gives an international perspective to the engineering design of low volume roads and their construction and maintenance. It is a single reference drawing from the dispersed literature. It lays out the basic principles of each topic from road location and geometric design, pavement design, slope stability and erosion control through construction to maintenance, then refers the reader to more comprehensive treatment elsewhere. Wherever possible, comparisons are made between the standard specifications and practices existing in the US, Canada, the UK, South Africa, Australia, and New Zealand. Topics covered include the following: Road classification, location and geometric design, Pavement concepts, materials and thickness design, Drainage, erosion and sediment control and water crossings, Slope stability, Geosynthetics, Road construction, maintenance and maintenance management. Low Volume Road Engineering Design: Construction and Maintenance is a valuable reference for engineers, planners, designers, and project managers in consulting firms, contracting firms, and NGOs. It also is an essential reference in support of university courses on transportation engineering and planning and on mining, oil and gas, and forestry infrastructure.
