Handbook of Geometric Topology R.B. Sher, R.J. Daverman, 2001-12-20 Geometric Topology is a foundational component of modern mathematics involving the study of spatial properties and invariants of familiar objects such as manifolds and complexes This volume which is intended both as an introduction to the subject and as a wide ranging resource for those already grounded in it consists of 21 expository surveys written by leading experts and covering active areas of current research They provide the reader with an up to date overview of this flourishing branch of mathematics **In the Tradition of Thurston** Ken'ichi Ohshika, Athanase Papadopoulos, 2020-12-07 This book consists of 16 surveys on Thurston's work and its later development The authors are mathematicians who were strongly influenced by Thurston's publications and ideas The subjects discussed include among others knot theory the topology of 3-manifolds circle packings complex projective structures hyperbolic geometry Kleinian groups foliations mapping class groups Teichmüller theory anti de Sitter geometry and co-Minkowski geometry The book is addressed to researchers and students who want to learn about Thurston's wide ranging mathematical ideas and their impact At the same time it is a tribute to Thurston one of the greatest geometers of all time whose work extended over many fields in mathematics and who had a unique way of perceiving forms and patterns and of communicating and writing mathematics *Knots* Gerhard Burde, Heiner Zieschang, Michael Heusener, 2013-11-27 This 3rd edition is an introduction to classical knot theory It contains many figures and some tables of invariants of knots This comprehensive account is an indispensable reference source for anyone interested in both classical and modern knot theory Most of the topics considered in the book are developed in detail only the main properties of fundamental groups and some basic results of combinatorial group theory are assumed to be known **Three-dimensional Orbifolds and Their Geometric Structures** Michel Boileau, Sylvain Maillot, Joan Porti, 2003 Orbifolds locally look like quotients of manifolds by finite group actions They play an important role in the study of proper actions of discrete groups on manifolds This monograph presents recent fundamental results on the geometry and topology of 3-dimensional orbifolds with an emphasis on their geometric properties It is suitable for graduate students and research mathematicians interested in geometry and topology **Kobe Journal of Mathematics** ,2004 **Geometry & Topology** ,2003 **Mathematical Reviews** ,2007 **Construction of Closed Higher Dimensional Orbifolds with Cyclic Local Groups and Their Orbifold Invariants** Robert A.
