**Geocentric and Heliocentric: What Do These Models Mean?**

The geocentric model is the basis for the geocentric model of the universe.

The heliocentric model is the basis for the heliocentric model of the universe.

Until the 15th century, people believed that the Earth was central to the universe and that the Moon, the Sun, and planets revolved around it in a perfect circle. This is known as geocentric theory. You can understand why people thought this way: the Sun rises from where we stand on Earth. It also looks like the Moon and the planets revolve around it.

## Geocentric Difficulties

Before 1492, people knew about planets which are far away and it is difficult to observe them. They knew about the Sun, Moon, and stars in the sky.

It may seem like the Sun, Moon, and stars move across the sky. If geocentric theory that the Sun, Moon, and stars revolved around the Earth.

For the first 1500 years, it was believed that the Earth was the center of the universe. This was because it was so difficult to observe the stars and planets. The geocentric model was based on the idea that the Earth was the center of the universe.

However, it was not until the 16th century that people began to question the geocentric model. This was because of the discovery of the Copernican heliocentric model. The heliocentric model was based on the idea that the Sun was the center of the universe.

Interestingly, the fact that the Sun is the center and the Earth is not, was discovered. The heliocentric model of the universe was first developed and today, scientists use it.

This updated edition of *Inventions of Teaching A Genealogy* presents an examination of the many and varied metaphors of teaching in English. These metaphors serve as sites to excavate conflicting historical conceptual and philosophical influences that have contributed to modern teaching practices. Though the Eurocentric perspectives of the first edition remain a focus, they are placed in a broader context that acknowledges their role as the authors coin it WEIRDness i.e. western educated industrialized rich democratic nature. In this revised and expanded edition, these perspectives are accompanied by multiple case studies of non-Western and Indigenous educational traditions. Chapter discussions are organized as a genealogy around key conceptual bifurcations in thought rather than case by case analysis or a chronology. This structure allows the authors to examine the origins of distinctions that are often taken for granted, such as cognitivism vs. behaviorism or constructivism vs. positivism. The genealogy develops around breaks in opinion that gave or are giving rise to diverse interpretations of knowledge, learning, and teaching, highlighting historical moments in which vibrant new figurative understandings of teaching emerged. A new chapter has been added, addressing the habits of interpretation needed to render the WEIRD world sensible alongside a much elaborated closing discussion intended to bring WEIRD inventions of teaching into sharper relief by contrasting them with non-WEIRD cultures and some of their approaches to teaching. *Inventions of Teaching A Genealogy* is an informative text for senior undergraduate and graduate courses in curriculum studies and foundations of teaching. It is also relevant for students, faculty, and researchers across the field of education who want to explore the consequences of diversities of opinion, belief, and practice concerning teaching and closely related topics of learning, knowing, and formal education.

Making an artificial brain is not a part of artificial intelligence. It will be a revolutionary journey of mankind exploring a science where one cannot write an equation; a material will vibrate like a geometric shape, and then those shapes will change to make decisions. Geometry of silence plays like a musical instrument to mimic a human brain; our thoughts, imagination, everything would be a 3D shape playing as music, composing music would be the brain's singular job. For a century, the Turing machine ruled human civilization; it was believed that irrespective of complexity, all events add up linearly. This book is a thesis to explore the science of decision making where events are 3D geometric shapes; events grow within and above, never side by side. The book documents inventions and discoveries in neuroscience, computer science, materials science, mathematics, and chemistry that explore the possibility of brain or universe as a time crystal. The philosophy of Turing, the philosophy of membrane-based neuroscience, and the philosophy of linear sequential thought process are challenged here by considering that a nested time crystal encompasses the entire conscious universe. Instead of an algorithm, the pattern of maximum free will is generated.

mathematically and that very pattern is encoded in materials such that its natural vibration integrates random events exactly similar to the way nature does it in every remote corner of our universe Find how an artificial brain avoids any necessity for algorithm or programming using the pattern of free will

Teaching Einsteinian Physics in Schools Magdalena Kersting, David Blair, 2021-08-30 In our world today scientists and technologists speak one language of reality Everyone else whether they be prime ministers lawyers or primary school teachers speak an outdated Newtonian language of reality While Newton saw time and space as rigid and absolute Einstein showed that time is relative it depends on height and velocity and that space can stretch and distort The modern Einsteinian perspective represents a significant paradigm shift compared with the Newtonian paradigm that underpins most of the school education today Research has shown that young learners quickly access and accept Einsteinian concepts and the modern language of reality Students enjoy learning about curved space photons

gravitational waves and time dilation often they ask for more A consistent education within the Einsteinian paradigm requires rethinking of science education across the entire school curriculum and this is now attracting attention around the world This book brings together a coherent set of chapters written by leading experts in the field of Einsteinian physics education The book begins by exploring the fundamental concepts of space time light and gravity and how teachers can introduce these topics at an early age A radical change in the curriculum requires new learning instruments and innovative instructional approaches Throughout the book the authors emphasise and discuss evidence based approaches to Einsteinian concepts including computer based tools geometrical methods models and analogies and simplified mathematical treatments Teaching Einsteinian Physics in Schools is designed as a resource for teacher education students primary and secondary science teachers and for anyone interested in a scientifically accurate description of physical reality at a level appropriate for school education
