Geometry: an Intuitive Approach Margaret Wiscamb Hutchinson,1972-01-01 Geometry Meridon Vestal Garner,B. G. Nunley,1971 Here explored in an intuitive manner are the basic concepts of geometry required for effective teaching of elementary school mathematics The text investigates the metric and non metric properties of both plane and three dimensional geometric figures Also included is a study of plane coordinate geometry Very precise mathematically this text will serve as the basis for a more rigorous study of geometry Answers to selected problems are also provided *Shapes & Perceptions* Gail S. Konkle,1974 **Mathematics Instructional Practices in Singapore Secondary Schools**

Berinderjeet Kaur,Yew Hoong Leong,2021-01-06 This book offers a detailed look into the how and what of mathematics instruction in Singapore It presents multiple aspects of mathematics instruction in schools ranging from the unique instructional core practices that promote mastery development of conceptual knowledge through learning experiences nurturing of positive attitudes self regulation of learning and development and use of instructional materials for making connections across mathematical ideas developing mathematical reasoning and developing fluency in applying mathematical knowledge in problem solving The book presents a methodology that is successful in documenting classroom instruction in a comprehensive manner The research findings illuminate instruction methods that are culturally situated robust and proven to impact student learning It demonstrates how a unique data source can be analysed through multiple lenses and provides readers with a rich portrait of how the school mathematics instruction is enacted in Singapore secondary schools Rods, Sets and Arrows Dirk De Bock,Geert Vanpaemel,2019-12-10 For anyone interested in the history and effects of the introduction of so called Modern Mathematics or Math matique Moderne or New Mathematics etc this book by Dirk De Bock and Geert Vanpaemel is essential reading The two authors are experienced and highly qualified Belgian scholars and the book looks carefully at events relating to school mathematics for the period from the end of World War II to 2010 Initially the book focuses on events which helped to define the modern mathematics revolution in Belgium before and during the 1960s The book does much more than that however for it traces the influence of these events on national and international debates during the early phases of the reform By providing readers with translations into English of relevant sections of key Continental documents outlining the major ideas of leading Continental scholars who contributed to the Math matique Moderne movement this book makes available to a wide readership the theoretical social and political backdrops of Continental new mathematics reforms In particular the book focuses on the contributions made by Belgians such as Paul Libois Willy Servais Fr d rique Lenger and Georges Papy The influence of modern mathematics fell away rapidly in the 1970s however and the authors trace the rise and fall from that time into the 21st century of a number of other approaches to school mathematics in Belgium in other Western European nations and in North America In summary this is an outstanding landmark publication displaying the fruits of deep scholarship and careful research based on extensive analyses of primary

sources **An Intuitive Approach to Elementary Geometry** Beauregard Stubblefield, 1969 **Intuition and the Axiomatic Method** Emily Carson, Renate Huber, 2006-07-02

Following developments in modern geometry logic and physics many scientists and philosophers in the modern era considered Kant's theory of intuition to be obsolete. But this only represents one side of the story concerning Kant intuition and twentieth century science. Several prominent mathematicians and physicists were convinced that the formal tools of modern logic set theory and the axiomatic method are not sufficient for providing mathematics and physics with satisfactory foundations. All of Hilbert, G. del Poincaré, Weyl and Bohr thought that intuition was an indispensable element in describing the foundations of science. They had very different reasons for thinking this and they had very different accounts of what they called intuition. But they had in common that their views of mathematics and physics were significantly influenced by their readings of Kant. In the present volume various views of intuition and the axiomatic method are explored beginning with Kant's own approach. By way of these investigations we hope to understand better the rationale behind Kant's theory of intuition as well as to grasp many facets of the relations between theories of intuition and the axiomatic method dealing with both their strengths and limitations. In short the volume covers logical and non logical historical and systematic issues in both mathematics and physics.

The IEA Study of Mathematics III Rami Burstein, 2014-06-28

The Second International Mathematics Study was conducted in the schools of 20 education systems under the sponsorship of the International Association for the Evaluation of Educational Achievement IEA. This is the third of three international reports each of which focus on a major component of the study. This volume describes the main findings from analyses of classroom processes and mathematic growth by posing such questions as how successful have the national education systems been in providing the opportunity to learn mathematics by the end of the lower secondary school, what do students at the lower secondary level know across educational systems and what have they learned during their most recent schooling experiences and what teaching practices are utilized in the mathematics classroom of the various systems and to what extent can these classroom processes explain differences in student achievements.

The Fourth International Conference on the History of Mathematics Education was hosted by Academy of Sciences and University of Turin Italy. About 50 senior and junior researchers from 16 countries met for four days to talk about one topic: the history of mathematics education. In total 44 contributions were presented. The themes were Ideas, people and movements; Transmission of ideas; Teacher education; Geometry and textbooks; Textbooks changes and origins; Curriculum and reform; Teaching in special institutions and Teaching of geometry. In this volume you find 28 of the papers, all of them peer reviewed. Since the first international conference on the history of mathematics education the aim has been to develop this area of research to attract more researchers and provide new insights that stimulate further digging. It is therefore very pleasing that so many new young researchers joined the conference presenting results from ongoing or recently finished PhD

projects This makes us confident about a prosperous future of this research area as we look forward to the Fifth International Conference on the History of Mathematics Education to be held in Utrecht the Netherlands in September 2017 Previous international conferences on the history of mathematics education 2009 in Garaburri Iceland 2011 in Lisbon Portugal 2013 in Uppsala Sweden
