Geometry of Group Representations William Mark Goldman, Andy R. Magid, American Mathematical Society, 1988

Contains papers based on talks delivered at the AMS IMS SIAM Summer Research Conference on the Geometry of Group Representations held at the University of Colorado in Boulder in July 1987 This work offers an understanding of the state of research in the geometry of group representations and their applications Geometry and Dynamics of Groups and Spaces Mikhail Kapranov, Sergii Kolyada, Yu. I. Manin, Pieter Moree, Leonid Potyagailo, 2008-03-05 Alexander Reznikov 1960-2003 was a brilliant and highly original mathematician This book presents 18 articles by prominent mathematicians and is dedicated to his memory In addition it contains an influential so far unpublished manuscript by Reznikov of book length The book further provides an extensive survey on Kleinian groups in higher dimensions and some articles centering on Reznikov as a person

Homotopy Theory via Algebraic Geometry and Group Representations Mark E. Mahowald, 1998 The academic year 1996-97 was designated as a special year in Algebraic Topology at Northwestern University Evanston IL In addition to guest lecturers and special courses an international conference was held entitled Current trends in algebraic topology with applications to algebraic geometry and physics The series of plenary lectures included in this volume indicate the great breadth of the conference and the lively interaction that took place among various areas of mathematics Original research papers were submitted and all submissions were refereed to the usual journal standards *Combinatorial Group Theory* Benjamin Fine, 1990 Eighteen papers presented during a special AMS session designed to draw together researchers in various areas of infinite group theory especially combinatorial group theory to share methods and results **Group Theory - Proceedings Of The Biennial Ohio State - Denison Conference** Ronald Solomon, Surinder K Sehgal, 1993-09-30 This volume is a collection of invited papers on the theory of groups most of which were presented at the biennial Ohio State Denison Conference May 1992 in memory of Hans Zassenhaus These papers treat important topics in the theory of p groups solvable groups finitely presented groups arithmetic groups monodromy groups and the general structure and representation theory of groups Of particular note are papers by John Walter on root systems by Leonard Scott on integral equivalence of permutation representations and Alex Turull on generalized Brauer groups *The Many Facets of Geometry* Nigel J. Hitchin, 2010-07 This title celebrates the academic career of Professor Nigel Hitchin one of the most influential figures in the field of differential and algebraic geometry *Lipa's Legacy* Józef Dodziuk, Linda Keen, 1997 The mathematical works of Lars Ahlfors and Lipman Bers are fundamental and lasting They have influenced and altered the development of twentieth century mathematics The personalities of these two scientists helped create a mathematical family and have had a permanent positive effect on a whole generation of mathematicians Their mathematical heritage continues to lead succeeding generations In the fall of 1994 one year after Bers' death some members of this family decided to inaugurate a series of conferences The Bers Colloquium to be held every three years The theme was to be a topic in the Ahlfors-Bers mathematical

tradition broadly interpreted Ahlfors died a year after the first colloquium future colloquia in this series will be called The Ahlfors Bers Colloquium The first colloquium was held in October 1995 at the Graduate Center CUNY in New York It coincided roughly with the second anniversary of Ber s death There were six lectures and much informal mathematical discussion This volume contains papers by the speakers and many of the participants The broad range of papers indicate how strong and far reaching Ber s influence has been The topics represented in the book include Teichmüller theory Kleinian groups higher dimensional hyperbolic geometry geometry of numbers circle packings theory of discrete groups classical complex function theory one dimensional dynamics fluid dynamics quasiconformal mappings in higher dimensions partial differential equations and classical algebraic geometry partial

Proceedings of the International Conference on Algebra Dedicated to the Memory of A. I. Mal'shev Leonid A. Bokut', A. I. Kostrikin, 1992 *Selected Papers on Number Theory, Algebraic Geometry, and Differential Geometry* Katsumi Nomizu, 1994 This book presents papers that originally appeared in the Japanese journal Sugaku The papers explore the relationship between number theory algebraic geometry and differential geometry

Hyperbolic Manifolds and Discrete Groups Michael Kapovich, 2009-08-04 The main goal of the book is to present a proof of the following Thurston s Hyperbolization Theorem The Big Monster Suppose that M is a compact atoroidal Haken 3 manifold that has zero Euler characteristic Then the interior of M admits a complete hyperbolic metric of finite volume This theorem establishes a strong link between the geometry and topology 3 of 3 manifolds and the algebra of discrete subgroups of $\text{Isom } \mathbb{H}^3$ It completely changed the landscape of 3 dimensional topology and theory of Kleinian groups Further it allowed one to prove things that were beyond the reach of the standard 3 manifold technique as for example Smith s conjecture residual finiteness of the fundamental groups of Haken manifolds etc In this book we present a complete proof of the Hyperbolization Theorem in the generic case Initially we planned 1 including a detailed proof in the remaining case of manifolds fibered over as well However since Otal s book Ota96 which treats the fiber bundle case became available only a sketch of the proof in the fibered case will be given here

Geometric Group Theory Ruth Charney, Michael Davis, Michael Shapiro, 2011-06-24 This series is devoted to the publication of monographs lecture resp seminar notes and other materials arising from programs of the OSU Mathematical Research Institute This includes proceedings of conferences or workshops held at the Institute and other mathematical writings

Surveys in Geometry and Number Theory Nicholas Young, 2007-01-18 A collection of survey articles by leading young researchers showcasing the vitality of Russian mathematics

Quantum Groups Pavel I. Etingof, Shlomo Gelaki, Steven Shnider, 2007 The papers in this volume are based on the talks given at the conference on quantum groups dedicated to the memory of Joseph Donin which was held at the Technion Institute Haifa Israel in July 2004 A survey of Donin s distinguished mathematical career is included Several articles which were directly influenced by the research of Donin and his colleagues deal with invariant quantization dynamical R matrices Poisson homogeneous spaces and reflection equation algebras The topics of other articles include

Hecke symmetries orbifolds set theoretic solutions to the pentagon equations representations of quantum current algebras unipotent crystals the Springer resolution the Fourier transform on Hopf algebras and as a change of pace the combinatorics of smoothly knotted surfaces The articles all contain important new contributions to their respective areas and will be of great interest to graduate students and research mathematicians interested in Hopf algebras quantum groups and applications Information for our distributors This book is copublished with Bar Ilan University Ramat Gan Israel

Combinatorial Mathematics IV L. R. A. Casse, W. D. Wallis, 2006-11-14 **Progress in Commutative Algebra 1**

Christopher Francisco, Lee C. Klingler, Sean Sather-Wagstaff, Janet C. Vassilev, 2012-04-26 This is the first of two volumes of a state of the art survey article collection which originates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non Noetherian commutative algebra These volumes present current trends in two of the most active areas of commutative algebra non noetherian rings factorization ideal theory integrality and noetherian rings the local theory graded situation and interactions with combinatorics and geometry This volume contains combinatorial and homological surveys The combinatorial papers document some of the increasing focus in commutative algebra recently on the interaction between algebra and combinatorics Specifically one can use combinatorial techniques to investigate resolutions and other algebraic structures as with the papers of Fl ystad on Boij S derburg theory of Geramita Harbourne and Migliore and of Cooper on Hilbert functions of Clark on minimal poset resolutions and of Mermin on simplicial resolutions One can also utilize algebraic invariants to understand combinatorial structures like graphs hypergraphs and simplicial complexes such as in the paper of Morey and Villarreal on edge ideals Homological techniques have become indispensable tools for the study of noetherian rings These ideas have yielded amazing levels of interaction with other fields like algebraic topology via differential graded techniques as well as the foundations of homological algebra analysis via the study of D modules and combinatorics as described in the previous paragraph The homological articles the editors have included in this volume relate mostly to how homological techniques help us better understand rings and singularities both noetherian and non noetherian such as in the papers by Roberts Yao Hummel and Leuschke **Homotopy**

Methods in Algebraic Topology Nicholas Kuhn, 2001-04-25 This volume presents the proceedings from the AMS IMS SIAM Summer Research Conference on Homotopy Methods in Algebraic Topology held at the University of Colorado Boulder The conference coincided with the sixtieth birthday of J Peter May An article is included reflecting his wide ranging and influential contributions to the subject area Other articles in the book discuss the ordinary elliptic and real oriented Adams spectral sequences mapping class groups configuration spaces extended powers operads the telescope conjecture p compact groups algebraic K theory stable and unstable splittings the calculus of functors the E_∞ tensor product and equivariant cohomology theories The book offers a compendious source on modern aspects of homotopy theoretic methods in many

algebraic settings Geometry and Physics: Volume 2 Jørgen Ellegaard Andersen, Andrew Dancer, Oscar García-Prada, 2018-10-18 Nigel Hitchin is one of the world's foremost figures in the fields of differential and algebraic geometry and their relations with mathematical physics and he has been Savilian Professor of Geometry at Oxford since 1997. Geometry and Physics A Festschrift in honour of Nigel Hitchin contain the proceedings of the conferences held in September 2016 in Aarhus, Oxford and Madrid to mark Nigel Hitchin's 70th birthday and to honour his far-reaching contributions to geometry and mathematical physics. These texts contain 29 articles by contributors to the conference and other distinguished mathematicians working in related areas including three Fields Medallists. The articles cover a broad range of topics in differential algebraic and symplectic geometry and also in mathematical physics. These volumes will be of interest to researchers and graduate students in geometry and mathematical physics. *Mathematical Control Theory* W.A. Coppel, 2006-11-15 **Geometric Methods for Quantum Field Theory** Hernan Ocampo, Sylvie Paycha, Andres Reyes, 2001 Both mathematics and mathematical physics have many active areas of research where the interplay between geometry and quantum field theory has proved extremely fruitful. Duality, gauge field theory, geometric quantization, Seiberg-Witten theory, spectral properties and families of Dirac operators and the geometry of loop groups offer some striking recent examples of modern topics which stand on the borderline between geometry and analysis on the one hand and quantum field theory on the other where the physicist's and the mathematician's perspective complement each other leading to new mathematical and physical concepts and results. This volume introduces the reader to some basic mathematical and physical tools and methods required to follow the recent developments in some active areas of mathematical physics including duality, gauge field theory, geometric quantization, Seiberg-Witten theory, spectral properties and families of Dirac operators and the geometry of loop groups. It comprises seven self-contained lectures which should progressively give the reader a precise idea of some of the techniques used in these areas as well as a few short communications presented by young participants at the school. Contents: Lectures: Introduction to Differentiable Manifolds and Symplectic Geometry T Wurzbacher Spectral Properties of the Dirac Operator and Geometrical Structures O Hijazi Quantum Theory of Fermion Systems Topics Between Physics and Mathematics E Langmann Heat Equation and Spectral Geometry Introduction for Beginners K Wojciechowski Renormalized Traces as a Geometric Tool S Paycha Concepts in Gauge Theory Leading to Electric-Magnetic Duality T S Tsun An Introduction to Seiberg-Witten Theory H Ocampo Short Communications: Remarks on Duality, Analytical Torsion and Gaussian Integration in Antisymmetric Field Theories A Cardona Multiplicative Anomaly for the η -Regularized Determinant C Ducourtioux On Cohomogeneity One Riemannian Manifolds S M B Kashani A Differentiable Calculus on the Space of Loops and Connections M Reiris Quantum Hall Conductivity and Topological Invariants A Reyes Determinant of the Dirac Operator Over the Interval $[0, 1]$ F Torres Ardila Readership: Mathematicians and physicists *Problems on Mapping Class Groups and Related Topics* Benson Farb, 2006-09-12 The appearance of mapping class groups in mathematics is ubiquitous. The book

presents 23 papers containing problems about mapping class groups the moduli space of Riemann surfaces Teichmüller geometry and related areas Each paper focusses completely on open problems and directions The problems range in scope from specific computations to broad programs The goal is to have a rich source of problems which have been formulated explicitly and accessibly The book is divided into four parts Part I contains problems on the combinatorial and cohomological group theoretic aspects of mapping class groups and the way in which these relate to problems in geometry and topology Part II concentrates on connections with classification problems in 3 manifold theory the theory of symplectic 4 manifolds and algebraic geometry A wide variety of problems from understanding billiard trajectories to the classification of Kleinian groups can be reduced to differential and synthetic geometry problems about moduli space Such problems and connections are discussed in Part III Mapping class groups are related both concretely and philosophically to a number of other groups such as braid groups lattices in semisimple Lie groups and automorphism groups of free groups Part IV concentrates on problems surrounding these relationships This book should be of interest to anyone studying geometry topology algebraic geometry or infinite groups It is meant to provide inspiration for everyone from graduate students to senior researchers
