<http://questgarden.com/89/25/8/091029084413/>

This WebQuest takes students through different steps where the students analyze how Geometry is in the world around them. The students first look to describe parallel and transversal lines, vertical angles, circles and concentric circles, etc. in a picture or object that they know. They then summarize their findings in a paragraph. For the next step, they create a picture that uses specific geometric properties such as perpendicular lines, concentric circles, midpoints, etc. Then next step they take is to extend their knowledge. The students create their own picture and directions on how to create the geometric picture using the appropriate properties and vocabulary. The last step has the students search for artwork in the world around us that is inspired by mathematics. The students are to then write about the piece and how math is used in this. Once the students have completed all four steps, the students then create a poster that shows their four steps and creations.
